About the Autumn Equinox and The Greenhouse Effect

Answers:

1. This is a group discussion about personal feelings toward living in the South Pole.
2. This year's autumn equinox is September 22, 2005.
3. The greenhouse effect is important to life on earth because without it, the earth would be much colder due to heat escaping back into space.
4. Some ways to save electricity include:
 - Planting shade trees
 - Turning off the lights when we leave a room
 - Turning the air conditioning up when it is not needed
 - Closing the blinds when the sun is shining in the windows
 - Turning off the computer and television when not using
5. Sources of these gases include motor vehicles (cars, buses, trucks), airplanes, power plants, and factories.
