

2002 Emerald Award Winner For Environmental Excellence

Sponsored by the Broward County Board of County Commissioners
And the Environmental Protection Department

Environmental Business of the Year

SeaStone products are manufactured cementitious stones containing a homogeneous mixture of natural shells and aggregates. The products may be further enhanced with colored glass, fossils, and elegant shells from SeaStone's collection series. These beautiful stones are engineered for residential, commercial, interior, exterior, horizontal, vertical, wet, and dry installations.

SeaStone Group manufactures environmentally friendly products that provide an alternative to coral rock. Company policies that enhance the environment include:

- Providing alternatives to naturally mined stone, which is a non-renewable resource. This also prevents destruction of coral reefs.
- Using raw materials like sea shells and glass aggregate, which are waste products from rock mining and other processes.
- Treating and filtering cement waste to extract water.

SeaStone is an eco-friendly product, using recycled glass, natural shells and aggregates that help protect the environment by reducing the need for mining natural stones.
