Animal Care Trust Fund Sub-Committee Reimbursement Qualification Checklist

PERSON/FOSTER/RESCUE PARTNER REQUESTING REIMBURSEMENT:

NAME: Bridget Lopez (Champ)

Meeting Date: September 28, 2023

Checklist

- ☐ Trust Fund Rules send
- ☐ Copy of all invoices marked PAID
- ☐ MEDICAL HISTORY from your vet, where your animal was treated, INCLUDING ALL RESULTS
- ☐ Completed CHRONOLOGICAL TIMELINE HISTORY form
- ☐ AFFIDAVIT – letter or e-mail stating that you have not received any money (including donations) from 3rd parties to pay for your bills (SIGNED)
- ☐ Any additional pictures or proof that could help your claim

PLEASE CHECK-MARK ALL APPLICABLE BOXES

Emergency Reimbursement

- ☐ Director or Committee Authorization
- ☐ Veterinarian statement received
- ☐ Funds available

Post-Adoption or Rescue-Pull Reimbursement

- ☐ Adopted/Rescued from shelter
- ☐ Adoption within 30 days of reimbursement request
- ☐ Medical or surgical in nature
- ☐ Could not be dealt with adequately by County Veterinarian
- ☐ Written request received indicating why owner/rescue group cannot afford to pay expenses
- ☐ Treatment is not the result of apparent abuse or neglect by the owner/rescue group

Financial Need Reimbursement

- ☐ Sterilized or agrees to sterilize animal
- ☐ Has rabies vaccine and license or agrees to have vaccinated and licensed
- ☐ Written request received indicating why owner cannot afford to pay expenses
- ☐ Funds available

Extraordinary Shelter Expenses

- ☐ Director Authorization
- ☐ Services not provided by County Animal Clinic
- ☐ Funds available

Total Amount of charges: \$ 2,749.47

Funds available: _____

Case Description

Patient Information

Patient name: LOPEZ CHAPO

Owner: Brigett Lopez

Species: Canine

Breed: Dachshund

Age: 8y

Case Information

Created: 04/26/2023 7:41:45am

Modified: 04/26/2023 7:53:30am

Clinic: HAH

Clinician: FISHKIN

Modality: CR

Patient ID: 113020

Sex: Neutered Male

History

Presented for a 10 day history of coughing and suspected infectious upper respiratory disease at home. In the past few days, Chapo has worsened and has not been eating well for about 5 days. Owners have had to syringe feed during this time. He was seen at his pDVM yesterday and given subcutaneous fluids, a Convenia injection, and 2 doses of Doxycycline at home. He has not shown improvement and is having trouble breathing, shaking, and is lethargic. Owners recently brought a new dog from the shelter home and all of the dogs in the household are having signs. Chapo is not vaccinated for Bordetella or CIV. Previous to this week he is reported to be a healthy dog.

Physical Findings

On PE, coughing, mild increased in RE, SPO2 98%
5% dehydrated
remainder of PE wnl

Report

Radiographic Findings

Three radiographs of the thorax are provided. There is soft tissue opacity with air bronchograms in the ventral lungs on both sides. In the left lungs are more significantly affected. Faint bronchial markings in the remaining lungs consistent with the patient's age. No pleural effusion. The cardiac silhouette is normal size. Adequate tracheal diameter. Normal cranial abdomen.

Conclusion

Bilateral ventral alveolar pattern most consistent with aspiration pneumonia, less likely infectious etiology. This is worse on the left side.

Victoria McEwen, DVM Diplomate,
American College of Veterinary
Radiology

ASSESSMENTS

Suspect Canine Infectious Respiratory Disease, Anorexia

Triage:

SPO2: 98% on room air

Diagnostics:

Sedation for radiographs: Butorphanol 0.4mg/kg IV

CBC/Chem - pending

Radiographs - pending

Diagnosis/Differentials:

1. CIRDC, concern for pneumonia - OPEN r/o Bordetella vs mycoplasma vs canine influenza vs parainfluenza vs aspiration pneumonia vs other

PLANS

Suspect Canine Infectious Respiratory Disease, Anorexia

Treatment:

LRS @ 20 ml/hr (2xM)

Cerenia 1 mg/kg IV

Vitals monitoring

SPO2 monitoring

Plan/Follow Up: Transfer to Dr. Fishkin today for continued care.

Client Communications: Discussed history, PE findings, and concern about anorexia and respiratory disease.

Recommended diagnostics (bloodwork, x-rays) to rule in/out pneumonia and hospitalization for anorexia. Discussed treatment plan may change based on what we find on diagnostics this morning. O elected DNR in case of CPA.

ANALYTICAL

26-Apr-2023 Exam

Dr. Randi Fishkin-Ranade

09:29

PATIENT HISTORY

General findings

Hospitalization day - Chapo this am is BAR< and SPO2 just prior to exam was 94% on room air

EENT: Mucoid discharge from Left nostril

Auscultation: Quiet, but no crackles appreciated.

ABD: SNP, NPM

AMB X 4 BCS 4/9

EXAM FINDINGS

Whole body

Imaging results

Radiographic findings - Presented for a 10 day history of coughing and suspected infectious upper respiratory disease at home. In the past few days, Chapo has worsened and has not been eating well for about 5 days. Owners have had to syringe feed during this time. He was seen at his pDVM yesterday and given subcutaneous fluids, a Convenia injection, and 2 doses of Doxycycline at home. He has not shown improvement and is having trouble breathing, shaking, and is lethargic. Owners recently brought a new dog from the shelter home and all of the dogs in the household are having signs. Chapo is not vaccinated for Bordetella or CIV. Previous to this week he is reported to be a healthy dog.

Physical Findings

On PE, coughing, mild increased in RE, SPO2 98%

5% dehydrated

remainder of PE wnl

Report

Radiographic Findings

Three radiographs of the thorax are provided. There is soft tissue opacity with air bronchograms in the ventral lungs on both sides. In the left lungs are more significantly affected. Faint bronchial markings in the remaining lungs consistent with the patient's age. No pleural effusion. The cardiac silhouette is normal size. Adequate tracheal diameter. Normal cranial abdomen.

Conclusion

Bilateral ventral alveolar pattern most consistent with aspiration pneumonia, less likely infectious etiology. This is worse on the left side.

Discharge - Purulent left nostril

Head

Nose

ASSESSMENTS

Anorexia

- Gave 2.5 mg torb IV to facilitate NG tube placement
- Still not successful
- Will call owner, may need to call and give more sedatin, consider E-tube for ease and discharge from hosp???
- ENTYCE?
- Cerenia?

Suspect Canine Infectious Respiratory Disease

- Based on rads added in Marbofloxacin, already on Convenia, Doxy
- Submitted Respiratory PCR as owner has total of 4 dogs and all are affected.

PLANS

Suspect Canine Infectious Respiratory Disease

- Owner taking to SCC

Client: **Briggett Lopez** (32355) Patient: **Chapo** (113020)

MEDICAL HISTORY: 26-Apr-2023 to 29-Apr-2023

vca

| Test | Results | Ref. range | Unit |
|---|-----------------|------------|------|
| Nucleic acids of Mycoplasma cynos were amplified from the specimen provided which proves the presence of the organism. If clinical signs compatible with M. cynos infection are present, this organism should be considered as the likely cause of clinical signs. Healthy dogs can be colonized by Mycoplasma cynos and so positive test results do not prove the clinical syndrome is caused by Mycoplasma cynos. There are other Mycoplasma spp. that may be primary pathogen and so use of this PCR assay does not exclude all organisms in this group. | | | |
| Strep. zooepidemicus | NEGATIVE | | |
| Canine Adenovirus type 2 | NEGATIVE | | |
| Canine Herpesvirus | POSITIVE | | |
| Nucleic acids of CHV were amplified from the specimen provided which proves the presence of organism. If clinical signs compatible with CHV infection are present, this organism should be considered as the likely cause of clinical signs. Healthy dogs can be colonized by CHV and so positive results do not prove the clinical syndrome is caused by CHV. | | | |
| Pan-Influenza | NEGATIVE | | |
| Comment | n/a | | |
| Nucleic acids from organisms reported as negative were not amplified from the specimen provided. This suggests that these organisms are not associated with the clinical signs of disease or the organisms were cleared by immune responses prior to sample collection. This PCR system includes a control assay that determines whether the sample submitted was adequate for testing. | | | |

***** PLEASE NOTE *****

Dogs have their own specific coronaviruses, which cannot be transmitted to people. The PCR test Antech Diagnostics is using in the Canine FastPanel Respiratory and GI profiles do not detect SARS-CoV-2, the causative agent of COVID-19 in people.

***** IMPORTANT UPDATE *****

Influenza H3N2 is now detected by Antech Diagnostics Respiratory PCR panel!

Antech Diagnostics Canine FastPanel Respiratory PCR now includes a Pan-Influenza PCR test for detection of all Influenza Type A viruses including H3N2 or novel/emerging strains.

A Pan-Influenza positive PCR result will be confirmed and typed by sequence analysis.

4/7/23

This is to certify...

that the animal described below has received a microchip identification implant

Patient Information:

| | | | |
|-----------|-----------------|--------------|-----------------|
| Pet ID #: | A2282984 | Microchip: | 900139000555681 |
| Patient: | BARRY | Date Issued: | 04/07/2023 |
| Species: | DOG | Age: | 9 MONTHS |
| Breed: | AMERICAN STAFF | Sex: | Neutered Male |
| Color: | BRINDLE & WHITE | | |

Microchip Manufacturer Information:

The brand of microchip your pet has is **MC SMART TAG**

How do microchips work?

Microchips have a unique number. When a handheld scanner is moved over the animal's body the scanner can read the number on the microchip. The microchip company is then called and the number given to the operator. The operator is then able to look in their database for the pet's information. Most veterinary offices, shelters and humane society's now have scanners and use them on all animal's that come in their doors.

If your address or phone number changes, it is important that you update your contact information with us as well as Found Animals.

Your pet's microchip requires to be manually activated by visiting their website: <https://www.idtag.com/user/register>. It's best to contact the microchip company to verify that the correct information is on file.

If your address or phone number changes, it is important that you update your contact information with us as well as your pet's microchip company.

You can update your information with us by visiting our website at <https://webapps.broward.org/PetsLicense/PetUpdate.aspx>

While microchipping is a great way for you to protect your pet should they become lost, it is very important that your pet wear a collar, rabies license and identification tag at all times. Research has proven that visible ID tags with the owner's name and phone number

| Test | Results | Ref. range | Unit |
|---|------------|------------|------|
| Cryptosporidium canis | DETECTED | | |
| Low parasite burden | | | |
| PCR result indicates that a C. canis parasite was detected in the sample. Zoonotic potential is considered low but possible in immunocompromised humans. Please refer to: CAPC Guidelines - Cryptosporidium | | | |
| Cryptosporidium felis | Undetected | | |
| Cystoisospora spp. | Undetected | | |
| Eimeria spp. | Undetected | | |
| Dipylidium caninum | Undetected | | |
| Echinococcus multilocularis | Undetected | | |
| Echinococcus granulosus | Undetected | | |
| Taenia spp. | Undetected | | |
| Neospora caninum | Undetected | | |
| Comment | | | |

A DETECTED KeyScreen GI Parasite PCR result in a patient with clinical signs that are appropriate to the organism, suggests this is the likely cause of the clinical signs. In the absence of clinical signs, parasite detection could suggest a subclinical infection or be related to coprophagia. Subclinical infection may need to be treated in cases where the parasite is zoonotic, has the potential to cause clinical signs or where continued shedding contributes to environmental contamination.

An UNDETECTED KeyScreen GI Parasite PCR result indicates that no parasitic organism was detected. An undetected PCR result most often indicates absence of infection but might also occur after successful treatment or with spontaneous resolution of infection. Undetected results due to cyclical shedding may be overcome with repeat testing or by testing pooled samples collected over multiple days.

For infections with an extra-intestinal phase (e.g., echinococcosis, toxoplasmosis, neosporosis), an undetected KeyScreen GI Parasite PCR result does not rule out systemic infection. If systemic infection is suspected, additional diagnostic investigation is indicated.

As a reference, we have provided links to CAPC guidelines. CAPC is an independent, non-profit organization.

Veterinarians: If the KeyScreen GI Parasite PCR result does not explain the clinical signs or if you require additional interpretive assistance, consultation with an internist is available free of charge (Monday to Friday 8am to 9pm EST, Saturday 9am to 6pm EST) at 1-888-838-4636.

Brigett Lopez (32355) | Chapo | Canine (Dachshund) | Black And Brown | M: N | 8y (04/26/2015)

26-Apr-2023

Dear Lopez Family

Chapo was admitted to VCAHAH for pneumonia. Based on history of a recent adoption from ACC and the other dogs in the house we are highly suspicious that Chapo's pneumonia is infectious. On radiographs there is also evidence that he may have aspirated worsening the pneumonia

Salient physical exam findings:

- Pulse ox on room air 94% this am
- Purulent nasal discharge
- Quiet lung fields

In hospital diagnostics and procedures

- Attempted to place NG tube: Chapo declined even with 2mg butorphanol given
- Chest radiographs
- Blood work
- Marbofloxacin
- **Entyce: Did eat some a/d after**

Pending diagnostics

- Respiratory PCR

Assessment:

- Suspect infectious pneumonia
- Anorexia. Did eat today with a little entyce

At home medications

- Marbofloxacin (Zeniquin) 25mg Tab. QTY: 10.00 tab -- Give 1 tablet every 24hrs. Refills: 1. Valid until: 26-Apr-2024. Exp: 24-Apr-2024.
- Maropitant (Cerenia) 16mg Tab. QTY: 1.00 tab -- Give 1/2 every 24 hrs. Refills: 4. Valid until: 26-Apr-2024. Exp: 24-Apr-2024.
- Capromorelin (Entyce) 30mg/mL/15mL OralS. QTY: 1.00 btl -- Give 0.5 ml every 24 hrs. . Refills: 2. Valid until: 26-Apr-2024. Exp: 24-Apr-2024.
- Please continue Doxycycline
- We believe Chapo received Convenia with Dr Stone

Follow up instructions

- **Please bring directly to ACC**

Subject: Fwd: Emergency kennel cough

Hello Emily,

Ty again for your assistance today with Chapo. TheDr was very caring and reassuring. Please submit this bill to your board on my behalf with the explanation we discussed earlier due to our adoption this past month, to see if you may obtain any reimbursement for us during our dire situation. It would be greatly appreciated.

Sincerely,

Bridget Lopez

Thank you, Bridget –

I'm looping in the folks who prepare the reimbursement materials on our side.

They may follow up with you on a few forms. Our Trust Fund Subcommittee recently met, so there may be a few months before the next meeting.

Thank you, kindly, and I hope Chapo is feeling better!

Hello Emily, please add this bill the the other one I sent for review attached to this email. I have spent almost \$3000 on my dogs since I brought home one from animal control. I do not have this kind of money but cannot allow our family pets to suffer during this grieving time in our lives. I need your help. Please respond.

Thank you, Bridget Lopez

Anesthesia was induced using an injectable combination of sedatives

Maintenance: endotracheal tube, isoflurane

Patient was aseptically prepared for surgery. A midline pre-scrotal incision was made, both testicles were exteriorized, and the left and right spermatic cords were ligated and inspected for bleeding. The subcutaneous tissue was sutured. An intradermal pattern with absorbable monofilament suture was used to suture skin. Tissue glue was applied to incision. A green tattoo was applied on the abdomen to indicate patient has been sterilized. A microchip was inserted. RABIES VACCINE ADMINISTERED: RABVAC: SER# E0424453A, EXP: 02/04/24

Discharge instructions:

1. Exercise restriction: no running, jumping, playing with people or other animals, or long walks
2. Do not bathe for 10 days
3. Suture removal not necessary
4. Monitor incision for discharge, redness, swelling. If green, yellow or thick bloody discharge is present please take pet to a veterinarian immediately.
5. Keep e-collar on at all times for 10 days following surgery.

MED RELEASE / ADOPTIC

Comments

* THIS ANIMAL HAS BEEN APPROVED FOR SAME DAY SURGERY PICK UP.
ADOPTER IS AWARE THAT THIS ANIMAL WILL/MAY HAVE RESIDUAL SIDE EFFECTS FROM ANESTHESIA. THIS INCLUDES (BUT NOT LIMITED TO) DILATED/CONSTRICTED PUPILS, UNSTEADY WALK, AGGRESSIVE BEHAVIOR, & POSSIBLE VOMITING. ADOPTER WILL MONITOR THEIR ANIMAL THROUGHOUT THIS PERIOD. ALL FURTHER TREATMENTS/EXPENSES THAT MAY ARISE THROUGHOUT THIS RECOVERY PERIOD ARE THE RESPONSIBILITY OF THE ADOPTER AT THEIR OWN VET. BCAC WILL NOT BE RESPONSIBLE. ADOPTER ACKNOWLEDGES THAT BCAC DOES NOT OFFER AFTER HOURS CARE.

Post-Surgical Care Instructions:

Anesthesia can cause nausea and vomiting, we suggest that you only offer your pet ½ of his or her normal meal size post-surgery. Normal feeding should continue the following day.

Keep your pet calm. Patients' recovering from surgery should have limited exercise. No running, jumping, bathing, climbing on furniture, playing with other pets or with humans, or other strenuous activities for 10-14 days. Remember to keep your pet indoors, it is crucial to avoid possible infection. Walk your pet on a leash to allow him/her to urinate or defecate and do not take your pet for long walks during this time.

Check the incision site daily for swelling, redness or discharge. Any swelling should be minimal and resolve within 48 hours. A small amount of yellow-orange discharge is normal the first 48 hours. If there is yellow-green discharge, excessive swelling or bruising, or a large amount of blood, please seek veterinary care immediately. Do not allow your pet to lick his or her incision site. If an E-collar was provided it must stay on pet at all times for 10 days. Failure to do so may result in infection, dehiscence (opening of surgical site) and the need for further surgical attention. If sutures are present on incision, they are due to be removed 10 days after surgery.

Thank you for adopting!
