Animal Care Trust Fund Sub-Committee Reimbursement Qualification Checklist

Person/Foster/Adopter/Rescue Partner Requesting Reimbursement:

Name: Susan Soeller

Meeting Date: February 28, 2020

Please Check-Mark All Applicable Boxes:

Emergency Reimbursement

☐ Director or Committee Member Authorization
☐ Veterinarian statement received
☒ Funds available

Post-Adoption or Rescue-Pull Reimbursement

☐ Adopted/Rescued from shelter
☐ Adoption within 30 days of reimbursement request
☐ Medical or surgical in nature
☐ Could not be dealt with adequately by County Vet
☐ Written request received indicating why owner cannot afford to pay expenses
☒ Treatment is not the result of apparent abuse or neglect by the owner
☐ Funds available

Financial Need Reimbursement

☐ Sterilized or agrees to sterilize animal
☐ Has rabies vaccine and license or agrees to have vaccinated and licensed
☒ Written request received indicating why owner cannot afford to pay expenses
☒ Funds available

Extraordinary Shelter Expenses

☒ Director Authorization
☐ Services not provided by County Animal Clinic
☐ Funds available

Amount of Charges: $ 1,084.12

Approved by Director: [Signature]

Broward County Board of County Commissioners
Mark D. Bogen • Dean Furr • Steve Geller • Dave V.C. Hines • Chip LaMarca • Nan H. Rich • Tim Ryan • Barbara Sharief • Michael Udine
www.broward.org
Name: Susan (Suze) Soeller

Animal Name: Mommy Sunshine

Chronological History Timeline:

Context: Debbie Brain, who lives at 71 Ivy Rd in Hollywood as been one of the persons caring for a cat colony at the Charles Vollman park on Taft Street in Hollywood for the past two years. She has worked with Cindy Bates and Susan Hart of the Hollywood Animal Control to help catch the cats and get them spayed or neutered and then released or adopted. She has herself has rescued and adopted two of the cats from the colony. Her best friend, Suze Soeller visits periodically from NY, and as an animal owner and lover herself, has helped Debbie with this during her visits. She has gotten to know many of the cats and was hoping to adopt one specifically (known to those who care for the cats as “Mommy” or “Pirate”). Suze is also a retired licensed vet tech in NY.

Date: 12/9/16 – began to notice that Mommy was not coming out to eat as usual, according to Debbie and others who care for the cats.

12/13/19: Mommy was found by Don (one of the people caring for the colony) and he observed that she appeared to be injured (matted blood, injured leg) and although he tried to pick her up, she did not allow him to and ran off. Later that day, Debbie found Mommy hiding under a vehicle but she would not come out.

12/14-15: Debbie made continued efforts to find and feed Mommy with hopes of determining the extent of her injuries.

12/16/19: Debbie’s friend Suze arrived and together she and Debbie found Mommy and were able to pick her up. Suzie immediately noticed that Mommy’s injuries seemed worse than expected. It looked as if she had been a victim of a dog attack as she had several visible puncture wounds on her body. She was emaciated and likely dyhhydrated, and was barely able to walk as one of her back legs was swollen. She was immediately transported to LeadER Animal Hospital in Cooper City. A full battery of tests were conducted and the doctor concluded that her injuries were a result of a dog bite. She had cellulitis due to contaminated puncture/bite wounds in the pelvic region and left pelvic limb. Her groin was also severely damaged and required closure with three staples. She was discharged with a series of pain medications and a follow up with our vet for Wednesday.

12/17/19: Overnight, Mommy developed a severe abcess which was discharging blood and fluid. She already had a follow up appointment set with Dr. Carlos Ameijeiras at the Neighborhood Vet Center in Hallandale Beach (which is Debbie’s vet for her dogs and cats).

12/18/19: Dr. Ameijeiras assessed that she had a severe abdominal infection, that was not responding to the meds previously prescribed. The doctor at LeaderER thought she might be at risk of dehisces which in fact occurred (meaning the staples were insufficient in holding the tissues together at the groin and would require exploratory surgery. Dr. Ameijeiras concurred and felt compelled to do that same day given the severity of the wounds and the size of the abcess. There was concern that her urinary track and vaginal wall would be damaged and not repairable.
The outcome of the exploratory surgery was that the vaginal wall tissues were intact and the urinary tract also intact. A tube was placed to drain the groin area to allow fluid and necrotic drainage to exit. It was expected that she would be kept for two days/night for monitoring and then removal of the drainage tube.

12/20/19  She was kept an additional night due to the wound opening when the tube was removed.

12/21: She was discharged on Saturday and will remain under the care of Dr. Ameijeiras during her recovery and will be cared for by Debbie at her home until she is well enough to fly with Suze back to New York. Suze is scheduled to return to Hollywood mid-January.
CLINICAL SUMMARY

Patient Number: 218694
Patient: Mami Soeller
Client: Susan Soeller

Clinical Record: 711130
Clinical Record Date: 12-16-2019

From: Clay Phillips, DVM; LeadER Animal Specialty Hospital
To: Dr. Amejeiras, Dvm, Carlos (Neighborhood Veterinary Center)
REFERRING VETERINARIANS: Dr. Amejeiras, Dvm, Carlos (Neighborhood Veterinary Center)
12-17-2019
Thank you for your referral of Mami, loved by Soeller, Susan. This is a copy of the medical summary for your records and continued care.

Admission Date: 12-16-2019
Discharge Date: 

Patient Details
Name: Mami
Species: Feline
Breed: Domestic Short Hair
Age: 3 years
Sex: Female Spayed
Referral: Dr. Amejeiras, Dvm, Carlos - Neighborhood Veterinary Center

History
12-16-2019 8:17:07pm, Clay Phillips, DVM

What brought you here today? Possible fractured left hind leg. Pt is an outdoor cat

12-16-2019 8:12:29pm, Clay Phillips, DVM

Physical Exam
12-16-2019 8:09:30pm, Clay Phillips, DVM

Rads results:
CONCLUSIONS: Findings are most consistent with soft tissue trauma and cellulitis with subcutaneous empysema noted in the right quadriceps muscle region and severe soft tissue swelling involving the left pelvic limb and left caudal, ventral and lateral abdominal wall. There appears to be a congenital severe lack of development of the ventral abdominal wall musculature.

RECOMMENDATIONS: Provide appropriate medical therapy for presumed severe cellulitis due to contaminated puncture or bite wounds in the pelvic region and left pelvic limb.

Assessments
12-17-2019 6:26:22am, Clay Phillips, DVM

DDX:
Trauma
Severe Cellulitis
Trauma peri-rectally
Open

0.36mL Convenia subQ
0.12mL Buprenorphine IM
Clip/clean/touch wound
Staple application
PO Buprenorphine TGH
PO Ondoral TGH
E collar until staples removal
10-14 day recheck for staple removal.

Note: Was clear to owner that the staples may not work at all and the area may dehisc or may need an actual explore. She asked trying this more minimalistic approach first.
Non-clumping litter at home.

12-16-2019 8:09:08pm, Clay Phillips, DVM
CBC/Chem/Lytes
FeLV/FIV SNAP Test
Culture of wound (Phillips obtained)
3 view pelvic x-rays and include entire left limb

Therapeutic / Procedure

12-16-2019 11:43:31pm, Clay Phillips, DVM
CLIP/CLEAN WOUND
Specifice

Clipped and flushed with copious amounts of sterile saline. Flushed to ensure no communication with rectum and only went into the tissue. The wound is deep and there is a concern that could need an explore but the muscle and subQ tissue appear healthy. Cleaned and closed with staples.

Note: placed 3 staples. Change this is a ruptured anal gland but it is completely open and appears as a perfect laceration. Flushed at least 10 times with sterile saline and chlorhex solution and scrubbed skin before placing skin staples.

Clay Phillips, DVM
Radiology Report (5149932-15/Radiographs Only - Stat)
Completed 12/16/19 09:26 PM

Patient Name: MAMI SOELLER (218694)
Requesting Doctor: Dr. Clay Phillips
Species: Feline
Gender: Female, Spayed
Breed: Domestic shorthair
Age: 3Yr 0Mo
Weight: 8.00 Lb

PRESENTING COMPLAINT: Swollen left hind limb

HISTORY: Priority
pt is an outdoor cat that owner(s) have been feeding. O gave injection of Acepromazine prior to visit. O stated pt was missing for one week, fund 2 days ago and left hind leg is swollen with some closed and open wounds from unknown cause. No sic/vld. pt temperature is currently 105.2, blood work pending.

ABDOMEN, PELVIS, PELVIC LIMBS: December 16, 2019, three views provided.

FINDINGS: No definitive abnormalities are seen in the abdomen. The spleen is prominent consistent with a history of receiving a sedative injection prior to radiography. Abdominal parenchymal organs are otherwise normal in size, shape and opacity. The G.I. tract is within normal limits with a moderate amount of ingesta in the stomach and a moderate amount of well-formed stool in the large intestine. Viewable skeletal structures are within normal limits. Their soft tissue thickening of the left caudal and ventral portions of the abdominal wall with a somewhat mottled opacity which may indicate bruising with hemorrhage into the subcutaneous fat as well as the possible presence of debris on the skin coat. The muscular portion of the ventral abdominal wall is extremely thin which is likely a congenital anomaly. Soft tissue emphysema is noted between the muscular layers of the right quadriceps region suggesting penetrating trauma such as a bite or puncture wound. Severe soft tissue swelling is present surrounding the left femur and extending medially and caudally with moderate soft tissue swelling extending distally along the left tibia and to the level of the left tarsus.

CONCLUSIONS: Findings are most consistent with soft tissue trauma and cellulitis with subcutaneous emphysema noted in the right quadriceps muscle region and severe soft tissue swelling involving the left pelvic limb and left caudal, ventral and lateral abdominal wall. There appears to be a congenital severe lack of development of the ventral abdominal wall musculature.

RECOMMENDATIONS: Provide appropriate medical therapy for presumed severe cellulitis due to contaminated puncture or bite wounds in the pelvic region and left pelvic limb.

Surgery Report

Patient Name: Mommy
Breed: Domestic Shorthaired Cat
Sex: FS
Patient ID: 12605
Date: Wednesday, December 18, 2019

IV Catheter: 22 g right cephalic
Mommy was premedicated with Dexamitor 0.5 mg/ml 0.1 ml, Ketamine 100 mg/ml 0.1 ml, Butorphanol 10 mg/ml 0.1 ml IV
Induction agent: Propofol 10 mg/ml 0 ml IV
Anesthesia maintained with isoflurane.
Pet received 35 mls I & S IV perioperatively.

Routine clipping and surgical preparation performed. Surgical preparation with one septic soap scrub and three scrubs alternating chlorohex scrub and alcohol. The abscess was flushed with saline and the wound of the rear leg was explored, no necrotic tissue was found but pockets of purulent material were found through. A pen rose hair was placed and anchored with 2-0 nylon. The skin was closed using 2-0 nylon in an interrupted fashion. The wound next to the vaginal was explored no necrotic tissue or purulent material was found. The vaginal wall was examined and no defect were noted.

Post Op: routine recovery, o called

To whom it may concern,

This letter confirms that I have not been provided with any money to pay for the treatment of Mommy at LeadER Animal Hospital or the Neighborhood Vet Center. I have not sought, nor received any donations. I understand that I will be asked to sign an affidavit, and agree to do so.

Thank you.

Susan Soeller
