Goal: 20% of Energy from Renewable Sources

Note: Solar energy installations include solar photovoltaic and solar water heating. Total number of solar installations are based on approved rebate program applications from 2007 to 2015 (see Source below). This map does not include existing solar installations before the rebate period or owners that did not apply for a rebate.

Note: Percentages are based on solar installations that received a solar rebate and 2007 building data from the Broward County Property Appraiser Department.

Broward County’s goal is to generate 20% of its energy from renewable sources. Although the percentage of buildings with solar installations does not indicate the percentage of energy generated by solar, it is the best indicator of solar energy in Broward County that is available at this time. Broward County will update the map as more detailed information is collected.

Number of Solar Energy Installations in Broward County by City

Percent of Buildings with a Solar Energy Installation

- 0.0% - 1.0%
- 1.0% - 2.0%
- Greater than 2.0%

Note: Number of buildings as of August 13, 2007
