Determinations and Compliance Findings for HUD-assisted Projects
24 CFR Part 58**

Project Information

Project Name: Broward County Green Infrastructure Stormwater Drainage System Project

Responsible Entity: Broward County Highway and Maintenance Division

Grant Recipient (if different than Responsible Entity): Broward County Board of Commissioners

Project Grant/Contract Number: MT124

Preparer Name and Title: Millie Radzikovsky, Environmental Consultant

Preparer Phone Number: 954-744-4691

Preparer email: mradzikovsky@broward.org

Certifying Officer Name and Title: Anh Ton, Director of Broward County Highway and Bridge Maintenance Division

Certifying Officer email: aton@broward.org

Consultant Name (if applicable): Millie Radzikovsky, BMA Consulting Engineering, Inc.

Consultant Phone Number: 954-744-4691

Consultant email: mradzikovsky@bma-ce.com

Direct Comments to: Diana Rodriguez, dirodriguez@broward.org

Project Location: Broadview Park, Broward County, Florida

Description of the Proposed Project [24 CFR 50.12 & 58.32; 40 CFR 1508.25]:

The proposed improvements will address the repair and replacement of aging drainage pipes, pavement and sidewalks, and the existing stormwater system in the Broadview Park neighborhood, a suburb of Fort Lauderdale, Broward County, Florida. Broadview Park is located in the central portion of the County, bordered on the north by Peters Road/Davie Boulevard, on the east by US-441/State Road 7, on the south by Interstate 595/State Road 84 and on the west by SW 52nd Avenue and Florida's Turnpike. The City of Plantation abuts the northern and western boundary of the neighborhood, while the City of Fort Lauderdale lies to the east and the Town of Davie to the south. See Attachment A – Project Location Map. This project will replace part of the existing

stormwater infrastructure in Broadview Park with a green stormwater infrastructure system. A green infrastructure system will maximize on-site infiltration, increase storage, and enhance groundwater recharge. In compliance with Florida Administrative Rule 62-40.431, a green infrastructure stormwater system will also lessen floods and lessen the discharge of pollutants into receiving waterways by preventing downstream erosion and sedimentation within the stormwater system. By imitating the natural hydrological processes that have been disturbed by impermeable surfaces like pavement and compacted soils, this initiative will significantly boost groundwater recharge. The proposed improvements include the replacement of aging stormwater pipes, the replacement of aging and undersized infrastructure with bioswale-exfiltration trench hybrid, bioswales, bioretention and bioretention areas, permeable asphalt pavement and permeable sidewalks. All of the proposed improvements are within Broward County's right-of-way and will not change land use within the project area.

Statement of Purpose and Need for the Proposal [40 CFR 1508.9(b)]: Purpose: The purpose of this project is to convert part of the existing drainage system to a green infrastructure stormwater system to maximize on-site infiltration, storage, groundwater recharge, and aid in the treatment of runoff to reduce the discharge of pollutants into receiving waterways, reduce flooding, and reduce downstream erosion and sedimentation in the stormwater system, in accordance with Florida Administrative Rule 62-40.431. Need: Stormwater runoff within the Broadview Park neighborhood enters into inlets, then through pipes, and is then discharged into surface waters. Groundwater recharge is disrupted by impervious surfaces such as pavement and compacted soils. The only pretreatment within the current drainage system is via some sediment removal in a catch basin. The existing pipes have aged and need to be replaced or in some cases upsized. Therefore, the need is to repair and replace the existing stormwater system to maximize on-site infiltration, increase storage, and improve groundwater recharge and the treatment of stormwater runoff. See Attachment B – Broadview Park Existing Stormwater System Map.

Existing Conditions and Trends [24 CFR 58.40(a)]: According to the 2020 Census the population of the Broadview Park neighborhood was 7,670. The total area of Broadview Park is 1.0 square mile (2.6 km²), of which 0.04 square miles (0.10 km²), or 3.92%, is water. The existing stormwater system consists of conventional roadway and drainage infrastructures involving impervious surfaces such as pavement and compacted soils, and aging drainage pipes in need of replacement. Green infrastructure is an approach to stormwater drainage system that protects, restores, or mimics the natural water cycle. Green infrastructure is effective, economical, and enhances community safety and improves quality of life. Green infrastructure incorporates both the natural environment and engineered systems to deliver clean water crucial to conserve ecosystem functions and produce a wide array of benefits to people and wildlife.

Funding Information

Grant Number	HUD Program	Funding Amount
MT124	Community Development Block Grant Mitigation	\$16,676,000.00
Click or tap here to enter text.	Click or tap here to enter text.	Click or tap here to enter text.

Estimated Total HUD Funded Amount: \$16,676,000.00

Estimated Total Project Cost (HUD and non-HUD funds) [24 CFR 58.32(d)]: County local match of \$5,000,000. Federal grant funds of \$16,676,000. Estimated Total Funding Amount of \$21,676,000

Compliance with 24 CFR 50.4, 58.5, and 58.6 Laws and Authorities

Record below the compliance or conformance determinations for each statute, executive order, or regulation. Provide credible, traceable, and supportive source documentation for each authority. Where applicable, complete the necessary reviews or consultations and obtain or note applicable permits of approvals. Clearly note citations, dates/names/titles of contacts, and page references. Attach additional documentation as appropriate.

Compliance Factors: Statutes, Executive Orders, and Regulations listed at 24 CFR §58.5 and §58.6	Are formal compliance steps or mitigation required?	Compliance determinations
STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 and 58.6		
Airport Hazards 24 CFR Part 51 Subpart D	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	The closest airport is 3.5 miles away. There are no formal compliance steps or mitigation required. This factor only applies to activities that occur within 2,500 feet of a civilian airport or within 15,000 feet of a military airfield. The project is outside the threshold distances. See Attachment C - Fort Lauderdale Airport and Broadview Park neighborhood locations.
Coastal Barrier Resources Coastal Barrier Resources Act, as amended by the Coastal Barrier Improvement Act of 1990 [16 USC 3501]	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	The project location is outside the coastal barrier resource zone. Due to location of the project, no formal compliance steps or mitigation required. See Attachment D - Coastal Barrier Map.
Flood Insurance Flood Disaster Protection Act of 1973 and National Flood Insurance Reform Act of 1994 [42 USC 4001-4128 and 42 USC 5154a]	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	The project is in compliance with Flood Insurance requirements. Due to location of the project, no formal compliance steps or mitigation required. This factor only applies to activities that impact property that is insurable under the Flood Disaster Protection Act and associated regulations. This project does not include any applicable activities. See Attachment E - FEMA Flood Map, Flood

		Insurance Policy and National Floodplain Insurance Participating Community Inventory.
--	--	---

STATUTES, EXECUTIVE ORDERS, AND REGULATIONS LISTED AT 24 CFR 50.4 & 58.5

Clean Air Clean Air Act, as amended, particularly section 176(c) & (d); 40 CFR Parts 6, 51, 93	Yes No <input type="checkbox"/> <input checked="" type="checkbox"/>	Based on the project description, this project includes no activities that would require further evaluation under the Clean Air Act. This project is located within the Southeast Florida Air Quality Maintenance Area per the National Ambient Air Quality Standards under the criteria provided in the Clean Air Act. Maintenance areas are locations that previously violated the National Ambient Air Quality Act Standards but have been redesignated to attainment status. This factor is only required for activities located in maintenance or non-attainment status for air pollutants. The project is in compliance with the Clean Air Act.
Coastal Zone Management Coastal Zone Management Act, sections 307(c) & (d)	Yes No <input type="checkbox"/> <input checked="" type="checkbox"/>	This project is not located in or near a Coastal Zone as defined in the state Coastal Management Plan. The project is in compliance with the Coastal Zone Management Act.
Contamination and Toxic Substances 24 CFR Part 50.3(i) & 58.5(i)(2)	Yes No <input type="checkbox"/> <input checked="" type="checkbox"/>	Based on a review of the FDEP Contamination Locator Map and Solid Waste Database, four documented contaminated sites were identified within 500 feet of the project corridor: 1) FDEP Facility ID No. 8501416, 7-Eleven Food Store #23498, 4451 Davie Blvd., Ft. Lauderdale, FL 33317, Active Petroleum Cleanup, 2) FDEP Facility ID No. 9063870, Checkers Drive In Restaurants Inc., 1149 S SR 7, Plantation, FL 33317, Active Petroleum Cleanup, 3) FDEP Facility ID No. 8502109, 7-Eleven Store #37222, 1991 S SR 7, Davie, FL 33317, Active Petroleum Cleanup, and 4) FDEP Facility ID No. 8502552, Exxon #4078 Riverland, 3941 Riverland Road, Ft. Lauderdale, FL 33317, Active Petroleum Cleanup. There are no documented non-landfill solid waste sites

		observed within 1000 feet and no Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), National Priority List (NPL), or Landfill sites within 1/2 mile of the project corridor. The project will be further evaluated for contamination as it moves through the design phase. See Attachment F – Contamination Sites.
Endangered Species Endangered Species Act of 1973, particularly section 7; 50 CFR Part 402	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	The project limits are located within the U.S. Fish and Wildlife Service's (USFWS's) Consultation Area for the following species: 1) snail kite (<i>Rostrhamus sociabilis</i>), 2) Florida bonneted bat (<i>Eumops floridanus</i>). No suitable habitat for the snail kite is located within or adjacent to the project area. The project limits occur within a residential area and no snail kites were observed during the field reviews. A determination of no effect is made for the snail kite for this project. A Florida bonneted bat survey was conducted on October 12, 2023, to verify that there are no bats roosting in the trees prior to construction. The survey area did not appear to contain suitable Florida bonneted bat foraging habitat. The trees evaluated include trees within Broward County's right-of-way. See Attachment G – Florida Bonneted Bat Survey Technical Memorandum. The project area is located outside the nearest wood stork (<i>Mycteria americana</i>) Core Foraging Area (Arthur R. Marshall Loxahatchee Wildlife Refuge). Based on the field review, there are no wetlands or shallow ditches within the project corridor which provide Suitable Foraging Habitat (SFH) for the wood stork. See Attachment H – Wood Stork Determination Key. No USFWS-designated critical habitat for any protected species was identified within the project corridor. Adverse impacts to listed/protected species and their habitat are not anticipated from the proposed project. A meeting with John Wrublik with the US Fish and Wildlife Service (USFWS) was held on January 19,

		2024, to discuss the project. John stated that Section 7 Consultation concurrence from USFWS on the determination of effect should be requested by a federal agency. John can only provide guidance on Section 7 Consultation to the county. The following species are within USFWS's Consultation Area: Snail kite, Florida bonneted bat, scrub jay, wood stork, West Indian manatee, and Eastern indigo snake. Broward County's determination for the above species were snail kite - "No effect", Florida bonneted bat - "May affect, but not likely to adversely affect" (MANLAA). Programmatic occurrence, scrub jay - "No effect", wood stork - "No effect", West Indian manatee - "No effect", and Eastern indigo snake - "No effect". John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern indigo snakes within a 0.62 miles radius of the project limits should be investigated. There were no historical data of the existence of Eastern indigo snakes within a 0.62 miles radius of the project limits. See Attachment I - Meeting Minutes with USFWS (January 19, 2024). The Florida Fish and Wildlife Conservation Commission (FWC) staff reviewed the Initial Coordination Package and replied on March 1, 2024, that "in accordance with our authorities under Chapter 379, Florida Statutes. We have no comments, recommendations, or objections related to fish and wildlife or listed species and their habitat to offer on this project at this time." See Attachment J for FWC's email (March 1, 2024).
Explosive and Flammable Hazards 24 CFR Part 51 Subpart C	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Based on the project description the project includes no activities that would require further evaluation under this section. The project is in compliance with explosive and flammable hazard requirements.
Farmlands Protection	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	This project does not include any activities that could potentially convert agricultural

Farmland Protection Policy Act of 1981, particularly sections 1504(b) and 1541; 7 CFR Part 658		<p>land to a non-agricultural use. The project is in compliance with the Farmland Protection Policy Act (FPPA). Broadview Park is an urban area. USDA-NRCS responded to the Initial Coordination Package on February 27, 2024, and stated that the project area meets criteria for an exemption since the location was previously disturbed and no new conversion of farmland would be taking place. The project is exempt from FPPA according to the Code of Federal Regulation 7CFR 658, Farmland Protection Policy Act, Section 658.2 & 658.3. Broward County is exempt from filling the AD1006 at this time. See Attachment K – FPPA Exemption Letter (February 27, 2024).</p>
<p>Floodplain Management</p> <p>Executive Order 11988, particularly section 2(a); 24 CFR Part 55</p>	<p>Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p>	<p>The majority of the project is located within Zones AE and AH of the 100-year floodplain. This project will not: 1) affect flood heights or base floodplain limits, 2) result in increased or new adverse environmental impacts, 3) increase flood risks or damage, or 4) significantly change the potential for interruption or termination of emergency service or emergency evacuation routes. Therefore, this project will not encroach upon the base floodplain.</p>
<p>Historic Preservation</p> <p>National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800</p>	<p>Yes <input type="checkbox"/> No <input checked="" type="checkbox"/></p>	<p>An archaeological and architectural history desktop review was conducted in December 2023 for this project. No previously recorded archaeological sites were identified within the study area, and the potential for identifying new archaeological sites is low due to heavy development and generally poorly drained soils in the area. Forty-one (41) previously recorded historic resources and approximately 1,750 previously unrecorded pre-1979 buildings or structures were identified within the Study Area. Based on the results of the desktop study, and due to the nature of the proposed project activities, Broward County determined that no historic properties listed or eligible for listing in the National Register of Historic Places, or otherwise significant, will be affected by the project. A Desktop Cultural</p>

	<p>Resources Assessment (CRAS) Study was prepared and sent to SHPO on March 28, 2024. On April 1, SHPO responded stating that they do not conduct county level or due-diligence reviews. The Memorandum was resubmitted, clarifying that the project is a federally funded project on April 10, 2024. SHPO did not respond within the 30 days to the Technical Memorandum that was resubmitted. Per 36 CFR § 800.5(c)(1) if SHPO has not responded within 30 days the undertaking can proceed and the consultation process is considered complete. See Attachment L – Broadview Park Desktop CRAS. An Initial Correspondence Package was sent to SHPO on March 15, 2024. Broward County received an email dated April 19, 2024, from SHPO stating that the proposed project is unlikely to affect historic properties and based on the nature of the project activities, SHPO does not expect the project to have an adverse effect on the districts' potential historical eligibilities. See Attachment M – Letter from SHPO (April 19, 2024). The Initial Coordination Package was also sent to the Seminole Tribe for their input on the project. An email from the Seminole Tribe was received on March 15, 2024. The Tribe was concerned that the proposed undertaking will adversely impact cultural resources important to the Tribe. Due to the proximity of site 8BD3208 to the project and since there has not been a cultural resource assessment survey of the project area, they recommend that ground disturbing activity be monitored by a professional archaeologist that meets the Secretary of the Interior's Professional Qualifications Standards (36 CFR 61). They also requested the delivery of an archaeological monitoring report for their review upon project completion. Other than Site 8BD3208, the Tribe have no objections or other comments. See Attachment N – Email from the Seminole Tribe (March 19, 2024). After examining the location of Site</p>
--	---

		8BD3203 in relation to the proposed Broadview Park drainage improvements, Broward County responded to the Seminole Tribe, April 4, 2024, that the County concluded that the proposed improvements won't have an impact on Site 8BD3202 because the site is neither directly next to nor inside the construction boundaries of the project. Site 8BD3202 is situated 984 feet from the Broadview Park project limits, with the North New River Canal and I-595 Express Roadway dividing them. See Attachment O – Site 8BD3208,
Noise Abatement and Control Noise Control Act of 1972, as amended by the Quiet Communities Act of 1978; 24 CFR Part 51 Subpart B	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Based on the project description, this project includes no activities that would require further evaluation under the Noise Control Act. The project is in compliance with this Noise regulation.
Sole Source Aquifers Safe Drinking Water Act of 1974, as amended, particularly section 1424(e); 40 CFR Part 149	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	The project limits are within the Biscayne Sole Source Aquifer. The region has an MOU or other working agreement with EPA for HUD projects impacting a sole source aquifer, and the MOU or working agreement excludes the project from further review. The project is in compliance with Sole Source Aquifer requirements.
Wetlands Protection Executive Order 11990, particularly sections 2 and 5	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	Based on preliminary desktop review and a site survey there are no wetlands within the project limits. The project is in compliance with Executive Order 11990.
Wild and Scenic Rivers Wild and Scenic Rivers Act of 1968, particularly section 7(b) and (c)	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	There are no wild and scenic rivers within the project limits. Therefore, no involvement is anticipated with this special designated resource. The project is in compliance with the Wild and Scenic Rivers Act of 1968, particularly section 7(b) and (c).
ENVIRONMENTAL JUSTICE		
Environmental Justice Executive Order 12898	Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>	No adverse environmental impacts were identified in the project's total environmental review. The project is in compliance with Executive Order 12898.

Environmental Assessment Factors [24 CFR 58.40; Ref. 40 CFR 1508.8 &1508.27] Recorded below is the qualitative and quantitative significance of the effects of the proposal on the character, features and resources of the project area. Each factor has been evaluated and documented, as appropriate and in proportion to its relevance to the proposed action. Verifiable source documentation has been provided and described in support of each determination, as appropriate. Credible, traceable and supportive source documentation for each authority has been provided. Where applicable, the necessary reviews or consultations have been completed and applicable permits or approvals have been obtained or noted. Citations, dates/names/titles of contacts, and page references are clear. Additional documentation is attached, as appropriate. **All conditions, attenuation or mitigation measures have been clearly identified.**

Impact Codes: Use an impact code from the following list to make the determination of impact for each factor.

- (1) Minor beneficial impact
- (2) No impact anticipated
- (3) Minor Adverse Impact – May require mitigation
- (4) Significant or potentially significant impact requiring avoidance or modification which may require an Environmental Impact Statement

Environmental Assessment Factor	Impact Code	Impact Evaluation
LAND DEVELOPMENT		
Conformance with Plans / Compatible Land Use and Zoning / Scale and Urban Design	2	No impact involvement. No mitigation required.
Soil Suitability/ Slope/ Erosion/ Drainage/ Storm Water Runoff	1	The proposed work will maximize on-site infiltration, storage, groundwater recharge and treatment of runoff. It will also reduce the discharge of pollutants into receiving waterways, reduce flooding and reduce downstream erosion and sedimentation in the storm water system. No mitigation required.
Hazards and Nuisances including Site Safety and Noise	2	No impact anticipated. No mitigation required.
Energy Consumption	2	No impact anticipated. No mitigation required.

Environmental Assessment Factor	Impact Code	Impact Evaluation
SOCIOECONOMIC		
Employment and Income Patterns	2	No impact anticipated. No mitigation required.
Demographic Character Changes, Displacement	2	No impact anticipated. No mitigation required.

Environmental Assessment Factor	Impact Code	Impact Evaluation
COMMUNITY FACILITIES AND SERVICES		
Educational and Cultural Facilities	2	No impact anticipated. No mitigation required.
Commercial Facilities	2	No impact anticipated. No mitigation required.
Health Care and Social Services	2	No impact anticipated. No mitigation required.
Solid Waste Disposal / Recycling	2	No impact anticipated. No mitigation required.
Waste Water / Sanitary Sewers	2	No impact anticipated. No mitigation required.
Water Supply	2	No impact anticipated. No mitigation required.
Public Safety - Police, Fire and Emergency Medical	2	No impact anticipated. No mitigation required.
Parks, Open Space and Recreation	1	The sidewalks will benefit the community in being able to access safe walking paths. No mitigation required.
Transportation and Accessibility	1	The project will provide ADA compliant sidewalks. No mitigation required.

Environmental Assessment Factor	Impact Code	Impact Evaluation
NATURAL FEATURES		
Unique Natural Features, Water Resources	2	No impact anticipated. No mitigation required.
Vegetation, Wildlife	2	No impact anticipated. No mitigation required.
Other Factors	2	No impact anticipated. No mitigation required.

Additional Studies Performed: N/A

Field Inspection (Date and completed by): A field review was conducted on October 12, 2023, by Millie Radzikovsky.

List of Sources, Agencies and Persons Consulted [40 CFR 1508.9(b)]: Resources used included: Florida Department of Transportation's (FDOT) Efficient Transportation Decision Making (ETDM) website, US Fish and Wildlife Service's (USFWS) Wetland Mapper, Florida Department of Environmental Protection's (FDEP) Contamination Locator Map, Federal Emergency Management Agency's (FEMA) National Flood Hazard Layer (NFHL) Viewer, USFWS' Coastal Barrier Resources System (CBRS) Mapping, USFWS' Information for Planning and Consultation (iPaC), Environmental Protection Agency (EPA) National Environmental protection Act (NEPA) Assist, and Audubon's EagleWatch Public Nest Map. Agencies and Person contacted: Florida State Clearinghouse – Chris Stahl; FDEP, Southeast District – Sirena Davila; FDOT – Jason Watts; FEMA; FWC – Eric Sutton; FL Dept. of Agriculture and Consumer Services – Rick Dolan; FL Regional Councils Association, South FL Regional Planning Council; NOAA, Southeast Regional Office – Roy E Crabtree; ; NOAA, Southeast Regional Office – Noah Silverman; SFWMD – Drew Bartlett; SFWMD – Barbara Conmy; SFWMD – Carolina Maran; Bureau of Historic Preservation, FL Division of Historic Resources - Alayna Gould; Miccosukee Tribe of Indians of Florida – Talbert Cypress; Miccosukee Tribe of Indians of Florida – Kevin Donaldson; Seminole Tribe of Florida – Paul Backhouse; Seminole Tribe of Florida – Bradley Mueller; Seminole Tribe of Florida – Marcellus Osceola Jr.; Seminole Tribe of Florida – Danielle Simon; United States Army Corps of Engineers (USACE) – Mark Evans; US EPA, Region 4 – Sam Nunn; US Forest Service, Southern Region, Region 8; USFWS – Mike Oetker; USFWS – John Wrublik; United States Department of Agriculture (USDA) – Isabelle Giuliani

List of Permits Obtained: No permits have been applied for. Anticipated permits include:

- South Florida Water Management Department (SFWMD) Environmental Resource Permit (ERP)
- Broward County Surface Water License
- US Army Corps of Engineers – Nationwide Permit

Public Outreach [24 CFR 50.23 & 58.43]: Click or tap here to enter text. A Public Meeting was held on November 7, 2023, at Broadview Park Civic Association, 11500 SW 42nd Avenue, Fort Lauderdale, FL 33317. The Public Meeting was conducted to offer an opportunity for residents to learn more about the project and provide feedback to the County's project representatives. See Attachment P – Public Meeting materials.

Cumulative Impact Analysis [24 CFR 58.32]: The project will maximize on-site infiltration, storage, groundwater recharge and treatment of runoff; reduce the discharge of pollutants into receiving waterways, reduce flooding and reduce downstream erosion and sedimentation in the storm water system; and increase accessibility within the community by providing sidewalks. This will improve the community's stormwater drainage infrastructure and the surrounding environment.

Alternatives [24 CFR 58.40(e); 40 CFR 1508.9]: Alternatives considered include the Build Alternative and the No Action Alternative.

No Action Alternative [24 CFR 58.40(e)]: If this project does not occur, the stormwater drainage infrastructure will not function at its maximum capacity with regards to on-site infiltration, storage, groundwater recharge and treatment of runoff. Without the project, a decrease in the amount of pollutants discharged into receiving waterways will not occur. In addition, the neighborhood will continue to be plagued by flooding and downstream erosion which directly affects resident's quality of life. Also, the neighborhood will continue to experience accessibility difficulties without the construction of much needed sidewalks that are ADA compliant.

Summary of Findings and Conclusions: The project is anticipated to have no impacts to land development, socioeconomics, community facilities and services, and the natural features in the Broadview Park neighborhood. The project involves improvements to the stormwater drainage system. The proposed infrastructure is anticipated to function at its maximum capacity with regards to on-site infiltration, storage, groundwater recharge and treatment of runoff. The reduction of pollutant discharge into receiving waterways, flooding, and downstream erosion is anticipated with the proposed improvements. The construction of sidewalks will benefit the community in being able to access safe walking paths with ADA compliant accommodations.

Mitigation Measures and Conditions [40 CFR 1505.2(c)]

Summarize below all mitigation measures adopted by the Responsible Entity to reduce, avoid, or eliminate adverse environmental impacts and to avoid non-compliance or non-conformance with the above-listed authorities and factors. These measures/conditions must be incorporated into project contracts, development agreements, and other relevant documents. The staff responsible for implementing and monitoring mitigation measures should be clearly identified in the mitigation plan.

Law, Authority, or Factor	Mitigation Measure
Endangered Species Act of 1973, particularly Section 7, 50 CFR Part 402	Will field review project limits prior to construction for Florida bonneted bat
National Historic Preservation Act of 1966, particularly sections 106 and 110; 36 CFR Part 800	If prehistoric or historic artifacts, such as pottery or ceramics, projectile points, dugout canoes, metal implements, historic building materials, or any other physical remains that could be associated with Native American, early European, or American settlement are encountered at any time within the project site area, the permitted project shall cease all activities involving subsurface disturbance in the vicinity of the discovery. The applicant shall contact the Florida Department of State, Division of Historical Resources, Compliance and Review Section at (850)-245-6333. Project activities shall not resume without verbal and/or written authorization. In the event that unmarked human remains are encountered during permitted activities, all work shall stop immediately, and the proper authorities notified in accordance with Section 872.05, Florida Statutes.
Click or tap here to enter text.	Click or tap here to enter text.

Determination:

- Finding of No Significant Impact** [24 CFR 58.40(g)(1); 40 CFR 1508.27]
The project will not result in a significant impact on the quality of the human environment.
Publish Concurrent notice per Section 58.43 and 58.45 **and obtain “Authority to Use Grant Funds”** (HUD 7015.16) per Section 58.70 and 58.71 before committing or drawing down any funds.
- Finding of Significant Impact** [24 CFR 58.40(g)(2); 40 CFR 1508.27]
The project may significantly affect the quality of the human environment.

SUBJECT: **Florida Bonneted Bat Limited Roost Survey Results**
Broadview Park
Grant Agreement #: MT-124
County: Broward County

Introduction

Broward County is proposing to create a green infrastructure storm water system in the Broadview Park neighborhood to maximize on-site infiltration, storage, groundwater recharge and treatment of runoff that will reduce the discharge of pollutants into receiving waterways, reduce flooding, and reduce downstream erosion and sedimentation in the storm water system in accordance with Florida Administrative Rule 62-40.431. The project will increase groundwater recharge by mimicking the natural hydrological processes that have become disrupted by impervious surfaces such as pavement and compacted soils.

The project corridor is located within U.S. Fish and Wildlife Service (USFWS) Consultation Area for the Florida bonneted bat (*Eumops floridanus*); an endangered species listed by the USFWS. The Florida bonneted bat (also known as the Florida mastiff bat) is the largest species of bat in Florida, with a body length of up to 6.5 inches and a wingspan of up to 20 inches. The hair color varies from black, to brown, to grayish, or cinnamon brown. It is endemic to southern Florida and has the smallest geographical range of any bat in the United States. Florida bonneted bats are known to roost in both natural and artificial structures. Potential roosting structures include mature or large live or dead trees, tree snags, and trees with cavities, hollows, or crevices. Roosting structures may also include rock crevices, buildings, bridges, and bat houses. Potential roosting trees include those that are greater than 33 feet tall, have a Diameter at Breast Height (DBH) greater than eight inches, and have cavities located higher than 16 feet from the ground. Florida bonneted bat foraging habitat is characterized by relatively open areas with prey sources and water. Examples of Florida bonneted bat foraging habitats include open fresh water, wetlands and upland forests, wetland and upland shrubs, agricultural lands, golf courses, parking lots, parks, and relatively small patches of natural habitat.

Methods

Desktop Review

A Project Location Map of the Broadview Park neighborhood were provided by the Broward County Project Manager (Attachment A). The project location map was used to define the survey area, identify potential Florida bonneted bat habitat, and to determine the type of survey required. For this project, potential Florida Bonneted Bat roosting habitat is considered trees more prominent than 33 feet tall with a DBH greater than eight inches. Potential foraging habitats include open fresh water, wetlands and upland forests, wetland and upland shrubs, agricultural lands, golf courses, parking lots, parks, and relatively small patches of natural habitat. According to the USFWS's Florida Bonneted Bat Consultation Guidelines

(October 2019) - **Attachment B**, two types of surveys are recognized, a limited roost survey and an acoustic survey. Limited roost surveys can be conducted for projects with an impact area less than five acres. An acoustic survey is required for projects with an impact area over five acres or if signs of bat habitation were identified during the limited roost survey.

Field Review

A field review was conducted to observe, evaluate, and document potential Florida bonneted bat habitat. Trees identified as potential roosting habitat were evaluated for the presence of broken branches or snags, cavities, hollows, loose bark, or crevices with a diameter opening of one inch or greater (roosting structures). Field notes for the presence of suitable roosting structures were recorded, where applicable. Where identified, cavity heights and orientations were recorded, and contents of openings with potential for roosting were observed for the presence of bats or indicators of bat roosting (e.g., guano, staining) using a telescoping video camera equipped with a light. Photographs of the typical trees in the neighborhood that could be potential Florida bonneted bat habitat are in **Attachment C**.

Florida Bonneted Bat Consultation Key

The Florida Bonneted Bat Consultation Key was also used to evaluate potential effects to the Florida Bonneted Bat from the proposed project (**Attachment D**).

Results

Based on review of these provided materials, it was determined that a limited roost survey would be required to evaluate existing trees within the Broadview Park neighborhood. A limited roost survey of existing trees in the Broadview Park neighborhood was conducted on October 12, 2023. Weather conditions were sunny and temperatures in the 80s. The survey area did not appear to contain suitable Florida bonneted bat foraging habitat. The trees evaluated include trees within Broward County's right-of-way. Florida bonneted bats, evidence of bat activity, or potential roosting cavities were not observed during the survey.

Results of the Florida Bonneted Bat Consultation key indicated that Florida Bonneted Bat roosting is not likely. The evaluation resulted in a "may affect, but not likely to adversely affect" (MANLAA-P) if BMPs are used and survey reports re-submitted. Programmatic Occurrence.

Based on the survey results and the Florida Bonneted Bat Consultation Key, it has been determined that this project will have a "may affect, but not likely to adversely affect" (MANLAA) on the Florida bonneted bat.

Summary

A limited roost survey was conducted on trees within Broward County's right-of-way in the Broadview Park neighborhood. Florida bonneted bats, evidence of bat activity, or potential roosting cavities were not observed during the survey. Existing trees surveyed did not contain cavities or signs of FBB roosting.

Results of the Florida Bonneted Bat Consultation key indicated that Florida Bonneted Bat roosting is not likely. The evaluation resulted in a "may affect, but not likely to adversely affect" (MANLAA).

Jacksonville, Florida 32232-0019

Subject: Consultation Key for the Florida bonneted bat; 04EF2000-2014-I-0320-R001

Dear Mr. Zinszer:

This letter replaces the December 2013, Florida bonneted bat guidelines provided to the U.S. Army Corps of Engineers (Corps) to assist your agency with effect determinations within the range of the Florida bonneted bat (*Eumops floridanus*). This October 2019 revision supersedes all prior versions. The enclosed *Florida Bonneted Bat Consultation Guidelines* and incorporated *Florida Bonneted Bat Consultation Key* (Key) are provided pursuant to the U.S. Fish and Wildlife Service's (Service) authorities under the Endangered Species Act of 1973, as amended (Act) (87 Stat. 884; 16 U.S.C.1531 *et seq.*). This letter, guidelines, and Key have been assigned Service Consultation Code: 41420- 04EF2000-2014-I-0320-R001.

The purpose of the guidelines and Key is to aid the Corps (or other Federal action agency) in making appropriate effect determinations for the Florida bonneted bat under section 7 of the Act, and streamline informal consultation with the Service for the Florida bonneted bat when the proposed action is consistent with the Key. There is no requirement to use the Key. There will be cases when the use of the Key is not appropriate. These include, but are not limited to: where project specific information is outside of the scope of the Key, applicants do not wish to implement the identified survey or best management practices, or if there is new biological information about the species. In these cases, we recommend the Corps (or other Federal action agency) initiate traditional consultation pursuant to section 7 of the Act, and identify that consultation is being requested outside of the Key.

This Key uses type of habitat (*i.e.*, roosting or foraging), survey results, and project size as the basis for making determinations of "may affect, but is not likely to adversely affect" (MANLAA) and "may affect, and is likely to adversely affect" (LAA). The Key is structured to focus on the type(s) of habitat that will be affected by a project. When proposed project areas provide features that could support roosting of Florida bonneted bats, it is considered roosting habitat. If evaluation of roosting habitat determines that roosting is not likely, then the area is subsequently evaluated for its value to the species as foraging habitat.

Roosting habitat

The guidelines describe the features of roosting habitat. When a project is proposed in roosting habitat, the likelihood that roosting is occurring is evaluated through surveys (*i.e.*, full acoustic or limited roost). When a roost is expected and the proposed activity will affect that roost, formal consultation is required. This is because the proposed activity is expected to take individuals through the destruction of the roost and the appropriate determination is that the project may affect, and is likely to adversely affect (LAA) the species. When roosting is expected, but all impacts to the roost can be avoided, and only foraging habitat (without roost structure) will be affected, the Service finds that it is reasonable to conclude that the proposed action is not likely to impair feeding, breeding, or sheltering. Thus, the proposed project may affect, but is not likely to affect the Florida bonneted bat (MANLAA).

The exception to this logic path is if the proposed action will affect more than 50 acres of foraging habitat in proximity to the roost. Under this scenario, we anticipate that the loss of the larger amount of foraging habitat near the roost could significantly impair feeding of young and overall breeding (*i.e.*, LAA). Consequently, these projects would require formal consultation to analyze the effect of the incidental take.

If the roost surveys demonstrate that roosting is not likely, the project is then evaluated for its effects to foraging habitat. Our evaluation of these actions is described below. The exception is for projects less than or equal to 5 acres if a limited roost survey is conducted. Limited roost surveys rely on peeping and visual surveys to determine whether roosting is likely. On these small projects, this survey strategy is believed to be more economical and is considered a reasonable effort to evaluate the potential for roosting. The Service acknowledges that this approach is less reliable in evaluating the likelihood of roosting when it is not combined with acoustic surveys. Therefore, when limited roost surveys are conducted for projects that are less than or equal to 5 acres in size and the determination is that roosting is not likely, we conclude that the proposed project may affect, but is not likely to adversely affect the species (MANLAA).

Foraging habitat

The guidelines describe the features of foraging habitat. Data informing the home range size of the Florida bonneted bats is limited. Global Positioning System (GPS) and radio-telemetry data for Florida bonneted bats documents that they move large distances and likely have large home ranges. Data from recovered GPS satellite tags on Florida bonneted bats tagged at Babcock-Webb Wildlife Management Area (BWWMA) found the maximum distance detected from a capture site was 24.2 mi (38.9 km); the greatest path length travelled in a single night was 56.3 mi (90.6 km) (Ober 2016; Webb 2018a-b). At BWWMA, researchers found that most individual locations were within one mile of the roost (point of capture) (Ober 2015). Additional data collected during the month of December documented the mean maximum distance Florida bonneted bats ($n=8$) with tags traveled from the roost was 9.5 mi (Webb 2018b).

The Service recognizes that the movement information comes from only one site (BWWMA and vicinity), and data are from small numbers ($n=20$) of tagged individuals for only short periods of time (Webb 2018a-b). We expect that across the Florida bonneted bat's range differences in

habitat quality, prey availability, and other factors will result in variable habitat use and home range sizes between locations. Foraging distances and home range sizes in high quality habitats are expected to be smaller while foraging distances and home range sizes in low quality habitat would be expected to be larger. Regardless, we use these studies as our best available information to evaluate when changes to foraging habitat may have an effect on the species ability to feed, breed, and shelter and subsequently result in incidental take. When considering where most of the nightly activity was observed, we calculate a foraging area centered on a roost with a 1 mile radius would include approximately 2,000 acres, and a foraging area centered on a 9.5 mile radius would encompass approximately 181,000 acres, on any given night.

Given the Service's limited understanding of how the Florida bonneted bat moves throughout its home range and selects foraging areas, we choose to use 50 acres of habitat as a conservative estimate to when loss of foraging habitat may affect the fitness of an individual to the extent that it would impair feeding and breeding. Projects that would remove, destroy or convert less than 50 acres of Florida bonneted bat foraging habitat are expected to result in a loss of foraging opportunities; however, this decrease is not expected to significantly impair the ability of the individual to feed and breed. Consequently, projects impacting less than 50 acres of foraging habitat that implement the identified best management practices in the Key would be expected to avoid take, and the appropriate determination is that the project may affect, but is not likely to adversely affect the species (MANLAA).

Next, the Service incorporated the level of bat activity into our Key to evaluate when a foraging area may have greater value to the species. When surveys document high bat activity, we deduce that this area has increased value and importance to the species. Thus, when high bat activity is detected in parcels with greater than 50 acres of foraging habitat, we anticipate that the loss, destruction, or conversion of this habitat could significantly impair the ability of an individual to feed and breed (*i.e.*, LAA); thus formal consultation is warranted.

If surveys do not indicate high bat activity, we anticipate that loss of this additional foraging habitat may affect, but is not likely to adversely affect the species (MANLAA). This is because although the acreage is large, the area does not appear to be important at the landscape scale of nightly foraging. Therefore, its loss is not anticipated to significantly impair the ability of an individual to feed or breed.

The exception to this approach is for projects greater than 50 acres when they occur in potential roosting habitat that is not found to support roosting or high bat activity. Under this scenario, the Service concludes that the loss of the large acreage of suitable roosting habitat has the potential to significantly impair the ability of an individual to breed or shelter (*i.e.*, LAA) because the species is cavities for roosting are expected to be limited range wide and the project will impair these limited opportunities for roosting.

Determinations

The Corps (or other Federal action agency) may reach one of several determinations when using this Key. Regardless of the determination, when acoustic bat surveys have been conducted, the Service requests that these survey results are provided to our office to increase our knowledge of

the species and improve our consultation process. Surveys results and reports should be transmitted to the Service at FBBsurveyreport@fws.gov or mail electronic file to U.S. Fish and Wildlife Service, Attention Florida bonneted bat surveys, 1339 20th Street, Vero Beach, Florida 32960. When formal consultation is requested, survey results and reports should be submitted with the consultation request to verobeach@fws.gov.

No effect: If the use of the Key results in a determination of “no effect,” no further consultation is necessary with the Service. The Service recommends that the Corps (or other Federal action agency) documents the pathway used to reach the determination in the project record and proceeds with other species analyses as warranted.

May Affect, Not Likely to Adversely Affect (MANLAA): In this Key we have identified two ways that consultation can conclude informally, MANLAA-P and MANLAA-C.

MANLAA-P: If the use of the Key results in a determination of “MANLAA- P,” the Service concurs with this determination based on the rationale provide above, and no further consultation is necessary for the effects of the proposed action on the Florida bonneted bat. The Service recommends that the Corps (or other Federal action agency) documents the pathway used to reach the determination in the project record and proceeds with other species analyses as warranted.

MANLAA-C: If the use of the Key results in a determination of MANLAA-C, further consultation with the Service is required to confirm that the Key has been used properly, and the Service concurs with the evaluation of the survey results. Survey results should be submitted with the consultation request.

May Affect, Likely to Adversely Affect (LAA) - When the determination in the Key is “LAA” technical assistance with the Service and modifications to the proposed action may enable the project to be reevaluated and conclude with a MANLAA-C determination. Under other circumstance, “LAA” determinations will require formal consultation.

Working with the Fish and Wildlife Foundation of Florida, the Service has established a fund to support conservation and recovery for the Florida bonneted bat. Any project that has the potential to affect the Florida bonneted bat and/or its habitat is encouraged to make a voluntary contribution to this fund. If you would like additional information about how to make a contribution and how these monies are used to support Florida bonneted bat recovery please contact Ashleigh Blackford, Connie Cassler, or José Rivera at 772-562-3909.

This revised Key is effective immediately upon receipt by the Corps. Should circumstances change or new information become available regarding the Florida bonneted bat and/or implementation of the Key, the determinations herein may be reconsidered and this Key further revised or amended. We have established an email address to collect comments on the Key and the survey protocols at: FBBguidelines@fws.gov.

Thank you for your continued cooperation in the effort to conserve fish and wildlife resources. If you have any questions regarding this Key, please contact the South Florida Ecological Services Office at 772-562-3909.

Sincerely,

Roxanna Hinzman
Field Supervisor
South Florida Ecological Services

South Florida Ecological Services Office

FLORIDA BONNETED BAT CONSULTATION GUIDELINES

October - 2019

The U.S. Fish and Wildlife Service's South Florida Ecological Services Field Office (Service) developed the Florida Bonneted Bat Consultation Guidelines (Guidelines) to assist in avoiding and minimizing potential negative effects to roosting and foraging habitat, and assessing effects to the Florida bonneted bat (*Eumops floridanus*) from proposed projects. The Consultation Key within the Guidelines assists applicants in evaluating their proposed projects and identifying the appropriate consultation paths under sections 7 and 10 of the Endangered Species Act of 1973 (Act), as amended (87 Stat. 884; 16 U.S.C. 1531 *et seq.*). These Guidelines are primarily for use in evaluating regulatory projects where development and land conversions are anticipated. These Guidelines focus on conserving roosting structures in natural and semi-natural environments. The following Consultation Area map (Figure 1 and Figure 2, Appendix A), Consultation Flowchart (Figure 3), Consultation Key, Survey Framework (Appendices B-C), and **Best Management Practices (BMPs)** (Appendix D) are based upon the best available scientific information. As more information is obtained, these Guidelines will be revised as appropriate. If you have comments, or suggestions on these Guidelines or the Survey Protocols (Appendix B and C), please email your comments to FBBguidelines@fws.gov. These comments will be reviewed and incorporated in an annual review.

Terms in **bold** are further defined in the Glossary.

Wherever possible, proposed development projects within the Consultation Area should be designed to avoid and minimize take of Florida bonneted bats and to retain their habitat. Applicants are encouraged to enter into early technical assistance/consultation with the Service so we may provide recommendations for avoiding and minimizing adverse effects. Although these Guidelines focus on the effects of a proposed action (*e.g.*, development) on natural habitat, (*i.e.*, non-urban), Appendix E also provides Best Management Practices for Land Management Projects.

If you are renovating an existing artificial structure (*e.g.*, building) within the urban environment with or without additional ground disturbing activities, these Guidelines do not apply. The Service is developing separate guidelines for consultation in these situations. Until the urban guidelines are complete, please contact the Service for additional guidance.

The final listing rule for the Florida bonneted bat (Service 2013) describes threats identified for the species. Habitat loss and degradation, as well as habitat modification, have historically affected the species. Florida bonneted bats are different from most other Florida bat species because they are reproductively active through most of the year, and their large size makes them capable of foraging long distances from their roost (Ober *et al.* 2016). Consequently, this species is vulnerable to disturbances around the roost during a greater portion of the year and considerations about foraging habitat extend further than the localized roost.

Use of Consultation Area, Flowchart, and Key

Figure 1 shows the Consultation Area for the Florida bonneted bat where this consultation guidance applies. For information on how the Consultation Area was delineated see Appendix A. The Consultation Flowchart (Figure 3) and Consultation Key direct project proponents through a series of couplets that will provide a conclusion or determination for potential effects to the Florida bonneted bat. *Please Note: If additional listed species, or candidate or proposed species, or designated or proposed critical habitat may be affected, a separate evaluation will be needed for these species/critical habitats.*

Currently, the Consultation Flowchart (Figure 3) and Consultation Key cannot be used for actions proposed within the urban development boundary in Miami-Dade and Broward County. The urban development boundary is part of the Consultation Area, but it is excluded from these Guidelines because Florida bonneted bats use this area differently (roosting largely in artificial structures), and small natural foraging areas are expected to be important. Applicants with projects in this area should contact the Service for further guidance and individual consultation.

Determinations may be either “no effect,” “may affect, but is not likely to adversely affect” (**MANLAA**), or “may affect, and is likely to adversely affect” (**LAA**). An applicant’s willingness and ability to alter project designs could sufficiently minimize effects to Florida bonneted bats and allow for a **MANLAA** determination for this species (informal consultation). The Service is available for early technical assistance/consultation to offer recommendations to assist in project design that will minimize effects. When take cannot be avoided, applicants and action agencies are encouraged to incorporate compensation to offset adverse effects. The Service can assist with identifying compensation options (e.g., conservation on site, conservation off-site, contributions to the Service’s Florida bonneted bat conservation fund, *etc.*).

Using the Key and Consultation Flowchart

- “No effect” determinations do not need Service concurrence.
- “May affect, but is not likely to adversely affect” **MANLAA**. Applicants will be expected to incorporate the appropriate BMPs to reach a **MANLAA** determination.
 - **MANLAA-P** (in blue in Consultation Flowchart) have programmatic concurrence through the transmittal letter of these Guidelines, and therefore no further consultation with the Service is necessary unless assistance is needed in interpreting survey results.
 - **MANLAA-C** (in black in Consultation Flowchart) determinations require further consultation with the Service.
- “May affect, and is likely to adversely affect” (**LAA**) determinations require consultation with the Service. Project modifications could change the **LAA** determinations in numbers 5, 8, 9, 11, 12, and 17 to **MANLAA**. When take cannot be avoided, **LAA** determinations will require a biological opinion.
- The Service requests copies of surveys used to support all determinations. If a survey is required by the Consultation Key and the final determination is “no effect” or “**MANLAA-P**”, send the survey to FBSurveypreport@fws.gov, or mail electronic file to U.S. Fish and Wildlife Service, Attention Florida bonneted bat surveys, 1339 20th Street, Vero Beach, Florida 32960. If a survey is required by the Consultation Key and the determination is “**MANLAA-C**” or “**LAA**”, submit the survey in the consultation request.

For the purpose of making a decision at Couplet 2: If any potential roosting structure is present, then the habitat is classified as **potential roosting habitat**, and the left half of the flowchart should be followed (see Figure 3). We recognize that roosting habitat may also be used by Florida bonneted bats for foraging. If the project site only consists of **foraging habitat** (*i.e.*, no suitable roosting structures), then the right side of the flowchart should be followed beginning at step 13.

For couplets 11 and 12: **Potential roosting habitat** is considered **Florida bonneted bat foraging habitat** when a determination is made that roosting is not likely.

Figure 1. Florida Bonneted Bat Consultation Area. Hatched area (Figure 2) identifies the urban development boundary in Miami-Dade and Broward County. Applicants with projects in this area should contact the Service for specific guidance addressing this area and individual consultation. The Consultation Key should not be used for projects in this area.

Figure 2. Urban development boundary in Miami-Dade and Broward County. The Consultation Key should not be used for projects in this area. Applicants with projects in this South Florida Urban Bat Area should contact the Service for specific guidance addressing this area and individual consultation.

Florida Bonneted Bat Consultation Key[#]

Use the following key to evaluate potential effects to the Florida bonneted bat (FBB) from the proposed project. Refer to the Glossary as needed.

- 1a. Proposed project or land use change is partially or wholly within the Consultation Area (Figure 1).....**Go to 2**
- 1b. Proposed project or land use change is wholly outside of the Consultation Area (Figure 1).....**No Effect**

- 2a. Potential FBB roosting habitat exists within the project area.....**Go to 3**
- 2b. No potential FBB roosting habitat exists within the project area.....**Go to 13**

- 3a. Project size/footprint* \leq 5 acres (2 hectares)..... **Conduct Limited Roost Survey (Appendix C)** then **Go to 4**
- 3b. Project size/footprint* $>$ 5 acres (2 hectares)..... **Conduct Full Acoustic/Roost Surveys (Appendix B)** then **Go to 6**

- 4a. Results show FBB roosting is likely**Go to 5**
- 4b. Results do not show FBB roosting is likely..... **MANLAA-P if BMPs (Appendix D) used and survey reports are submitted. Programmatic concurrence.**

- 5a. Project will affect roosting habitat.....**LAA⁺ Further consultation with the Service required.**
- 5b. Project will not affect roosting habitat..... **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 6a. Results show some FBB activity.....**Go to 7**
- 6b. Results show no FBB activity.....**No Effect**

- 7a. Results show FBB roosting is likely.....**Go to 8**
- 7b. Results do not show FBB roosting is likely.....**Go to 10**

- 8a. Project will not affect roosting habitat.....**Go to 9**
- 8b. Project will affect roosting habitat..... **LAA⁺ Further consultation with the Service required.**

- 9a. Project will affect* $>$ 50 acres (20 hectares) (wetlands and uplands) of foraging habitat.....**LAA⁺ Further consultation with the Service required.**
- 9b. Project will affect* \leq 50 acres (20 hectares) (wetlands and uplands) of foraging habitat..... **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 10a. Results show high FBB activity/use.....**Go to 11**
- 10b. Results do not show high FBB activity/use.....**Go to 12**

- 11a. Project will affect* $>$ 50 acres (20 hectares) (wetlands and uplands) of FBB habitat (roosting and/or foraging)..... **LAA⁺ Further consultation with the Service required.**
- 11b. Project will affect* \leq 50 acres (20 hectares) (wetlands and uplands) of FBB habitat (roosting and/or foraging)..... **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 12a. Project will affect* $>$ 50 acres (20 hectares) (wetlands and uplands) of FBB habitat.....**LAA⁺ Further consultation with the Service required.**
- 12b. Project will affect* \leq 50 acres (20 hectares) (wetlands and uplands) of FBB habitat..... **MANLAA-P if BMPs (Appendix D) used and survey reports are submitted. Programmatic concurrence.**

- 13a. FBB foraging habitat exists within the project area and foraging habitat will be affected.....**Go to 14**
- 13b. FBB foraging habitat exists within the project area and foraging habitat will not be affected **OR** no FBB foraging habitat exists within the project area.....**No Effect**
- 14a. Project size* > 50 acres (20 hectares) (wetlands and uplands)**Go to 15**
- 14b. Project size* ≤ 50 acres (20 hectares) (wetlands and uplands) **MANLAA-P if BMPs (Appendix D) used. Programmatic concurrence.**
- 15a. Project is within 8 miles (12.9 kilometers) of high quality potential roosting areas[^].....**Conduct Full Acoustic Survey (Appendix B) and Go to 16**
- 15b. Project is not within 8 miles (12.9 kilometers) of high quality potential roosting area[^].....**MANLAA-P if BMPs (Appendix D) used. Programmatic concurrence.**
- 16a. Results show some FBB activity.....**Go to 17**
- 16b. Results show no FBB activity.....**No Effect**
- 17a. Results show high FBB activity/use.....**LAA⁺ Further consultation with the Service required.**
- 17b. Results do not show high FBB activity/use..... **MANLAA-P if BMPs (Appendix D) used and survey reports submitted. Programmatic concurrence.**

[#] If you are within the urban environment and you are renovating an existing artificial structure (with or without additional ground disturbing activities), these Guidelines do not apply. The Service is developing separate guidelines for consultation in these situations. Until the urban guidelines are complete, please contact the Service for additional guidance

^{*}Includes wetlands and uplands that are going to be altered along with a 250- foot (76.2- meter) buffer around these areas if the parcel is larger than the altered area.

⁺Project modifications could change the LAA determinations in numbers 5, 8, 9, 11, 12, and 17 to MANLAA determinations.

[^]Determining if **high quality potential roosting areas** are within 8 mi (12.9 km) of a project is intended to be a desk-top exercise looking at most recent aerial imagery, not a field exercise.

Figure 3. Florida bonneted bat Consultation Flowchart. “No effect” determinations do not need Service concurrence. “May affect, but not likely to adversely affect”, **MANLAA-P**, in blue have programmatic concurrence through the transmittal letter of these Guidelines, and therefore no further consultation with the Service is necessary unless assistance is needed in interpreting survey results. **MANLAA-C** determinations in black require further consultation with the Service. Applicants are expected to incorporate the appropriate **BMPs** to reach a **MANLAA** determination. “May affect, and is likely to adversely affect”, **LAA**, (also in black) determinations require consultation with the Service. Further consultation with the Service may identify project modifications that could change the **LAA** determinations in numbers 5, 8, 9, 11, 12, and 17 to **MANLAA** determinations. The Service requests Florida bonneted bat survey reports for all determinations.

GLOSSARY

BMPs – Best Management Practices. Recommendations for actions to conserve roosting and foraging habitat to be implemented before, during, and after proposed development, land use changes, and land management activities.

FBB Activity – Florida bonneted bat (FBB) activity is when any Florida bonneted bat calls are recorded during an acoustic survey or human observers see or hear Florida bonneted bats on a site.

FORAGING HABITAT - Comprised of relatively open (*i.e.*, uncluttered or reduced numbers of obstacles, such as fewer tree branches and leaves, in the flight environment) areas to find and catch prey, and sources of drinking water. In order to find and catch prey, Florida bonneted bats forage in areas with a reduced number of obstacles. This includes: open fresh water, permanent or seasonal freshwater wetlands, within and above wetland and upland forests, wetland and upland shrub, and agricultural lands (Bailey *et al.* 2017). In urban and residential areas drinking water, prey base, and suitable foraging can be found at golf courses, parking lots, and parks in addition to relatively small patches of natural habitat.

FULL ACOUSTIC/ROOST SURVEY - This is a comprehensive survey that will involve systematic acoustic surveys (*i.e.*, surveys conducted 30 minutes prior to sunset to 30 minutes after sunrise, over multiple consecutive nights). Depending upon acoustic results and habitat type, targeted roost searches through thorough visual inspection using a tree-top camera system or observations at emergence (*e.g.*, looking and listening for bats to come out of tree cavities around sunset) or more acoustic surveys may be necessary. See Appendix B for a full description.

HIGH FBB ACTIVITY/USE - High Florida bonneted bat (FBB) activity/use or importance of an area can be defined using several parameters (*e.g.*, types of calls, numbers of calls). An area will be considered to have high FBB activity/use if ANY of the following are found: (a) multiple FBB feeding buzzes are detected; (b) FBB social calls are recorded; (c) large numbers of Florida bonneted bat calls (9 or more) are recorded throughout one night. Each of these parameters is considered to indicate that an area is actively used and important to FBBs, however, the Service will further evaluate the activity/use of the area within the context of the site (*i.e.*, spatial distribution of calls, site acreage, habitat on site, as well as adjacent habitat) and provide additional guidance.

HIGH QUALITY POTENTIAL ROOSTING AREAS - Sizable areas (>50 acres) [20 hectares] that contain large amounts of high-quality, natural roosting structure – (*e.g.*, predominantly native, mature trees; especially pine flatwoods or other areas with a large number of cavity trees, tree hollows, or high woodpecker activity).

LAA - May Affect, and is Likely to Adversely Affect. The appropriate conclusion if any adverse effect to listed species may occur as a direct or indirect result of the proposed action or its interrelated or interdependent actions, and the effect is not: discountable, insignificant, or

beneficial [see definition of “may affect, but is not likely to adversely affect” (**MANLAA**)]. In the event the overall effect of the proposed action is beneficial to the listed species, but also is likely to cause some adverse effects, then the proposed action is “likely to adversely affect” the listed species. If incidental take is anticipated to occur as a result of the proposed action, an “is likely to adversely affect” (**LAA**) determination should be made. An “is likely to adversely affect” determination requires the initiation of formal section 7 consultation.

LIMITED ROOST SURVEY - This is a reduced survey that may include the following methods: acoustics, observations at emergence (e.g., looking and listening for bats to come out of tree cavities around sunset), and visual inspection of trees with cavities or loose bark using tree-top cameras (or combination of these methods). Methods are fairly flexible and dependent upon composition and configuration of project site and willingness and ability of applicant and partners to conserve roosting structures on site. See also Appendix C for a full description.

MANLAA - May Affect, but is Not Likely to Adversely Affect. The appropriate conclusion when effects on listed species are expected to be discountable, insignificant, or completely beneficial. Beneficial effects are contemporaneous positive effects without any adverse effects to the species. Insignificant effects relate to the size of the impact and should never reach the scale where take occurs. Discountable effects are those extremely unlikely to occur. Based on best judgment, a person would not: (1) be able to meaningfully measure, detect, or evaluate insignificant effects; or (2) expect discountable effects to occur. To use these Guidelines and Consultation Key applicants must incorporate the appropriate **BMPs** (Appendix D) to reach a **MANLAA** determination.

In this Consultation Key we have identified two ways that consultation can conclude informally, **MANLAA-P** and **MANLAA-C**:

MANLAA-P: programmatic concurrence is provided through the transmittal letter of these Guidelines, no additional consultation is required with the Service for Florida bonneted bats. All survey results must be submitted to Service.

MANLAA-C: further consultation with the Service is required to confirm that the Consultation Key has been used properly, and the Service concurs with the evaluation of the survey results. Request for consultation must include survey results.

NO EFFECT - The appropriate conclusion when the action agency determines its proposed action will not affect listed species or designated critical habitat.

POTENTIAL ROOSTING HABITAT - Includes forest and other areas with tall, mature trees or other areas with suitable roost structures (e.g., utility poles, artificial structures). Forest is defined as all types including: pine flatwoods, scrubby flatwoods, pine rocklands, royal palm hammocks, mixed or hardwood hammocks, cypress, sand pine scrub, or other forest types. (Forrest types currently include exotic forests such as melaleuca, please contact the Service for additional guidance as needed). More specifically, this includes habitat in which suitable structural features for breeding and sheltering are present. In general, roosting habitat contains one or more of the following structures: tree snags, and trees with cavities, hollows, deformities, decay, crevices, or loose bark. Structural characteristics are of primary importance.

Florida bonneted bats have been found roosting in habitat with the following structural features, but may also occur outside of these parameters:

- trees greater than 33 feet (10 meters) in height, greater than 8 inches (20 centimeters) in diameter at breast height (DBH), with cavity elevations higher than 16 feet (5 meters) above ground level (Braun de Torrez 2019);
- areas with a high incidence of large or mature live trees with various deformities (e.g., large cavities, hollows, broken tops, loose bark, and other evidence of decay) (e.g., pine flatwoods);
- rock crevices (e.g., limestone in Miami-Dade County); and/or
- artificial structures, mimicking natural roosting conditions (e.g., bat houses, utility poles, buildings), situated in natural or semi-natural habitats.

In order for a building to be considered a roosting structure, it should be a minimum of 15 feet high and contain one or more of the following features: chimneys, gaps in soffits, gaps along gutters, or other structural gaps or crevices (outward entrance approximately 1 inch (2.5 centimeters) in size or greater. Structures similar to the above (e.g., bridges, culverts, minimum of 15 feet high) are expected to also provide roosting habitat, based upon the species' morphology and behavior (Keeley and Tuttle 1999). Florida bonneted bat roosts will be situated in areas with sufficient open space for these bats to fly (e.g., open or semi-open canopy, canopy gaps, above the canopy, and edges which provide relatively uncluttered conditions [*i.e.*, reduced numbers of obstacles, such as fewer tree branches and leaves, in the flight environment]).

For the purpose of this Consultation Key: Roosting habitat refers to habitat with structures that can be used for daytime and maternity roosting. Roosting at night between periods of foraging can occur in a broader range of structure types. For the purposes of this guidance we are focusing on day roosting habitat.

ROOSTING IS LIKELY—Determining likelihood of roosting is challenging. The Service has provided the following definition for the express purpose of these Guidelines. Researchers use additional cues to assist in locating roosts. As additional indicators are identified and described we expect our Guidelines will be improved.

In this Consultation Key the Service will consider the following evidence indicative that roosting is likely nearby (*i.e.*, reasonably certain to occur) if **ANY** of the following are documented: (a) Florida bonneted bat calls are recorded within 30 minutes before sunset to 1½ hours following sunset or within 1½ hours before sunrise; (b) emergence calls are recorded; (c) human observers see (or hear) Florida bonneted bats flying from or to potential roosts; (d) human observers see and identify Florida bonneted bats within a natural roost or artificial roost; and/or (e) other bat sign (e.g., guano, staining, etc.) is found that is identified to be Florida bonneted bat through additional follow-up.

In addition to the aforementioned events, researchers consider roosting likely in an area when (1) large numbers of Florida bonneted bat calls are recorded throughout the night (e.g., ≥ 25 files per night at a single acoustic station when 5 second file lengths are recorded); (2) large numbers of FBB calls are recorded over multiple nights (e.g., an average of ≥ 20 files per night from a single detector when 5 second file lengths are recorded); or (3) social calls are recorded. Because social calls and large numbers of calls recorded over one or more nights can be indicative of high

FBB activity/use or when roosting is likely, the Service is choosing not to use these as indicators to make the determination that roosting is likely. Instead we are relying on the indicators that are only expected to occur at or very close to a roost location [(a)-(e) above].

TAKE - to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect or attempt to engage in any such conduct. [ESA §3(19)] Harm is further defined by the Service to include significant habitat modification or degradation that results in death or injury to listed species by significantly impairing behavioral patterns such as breeding, feeding, or sheltering. Harass is defined by the Service as actions that create the likelihood of injury to listed species to such an extent as to significantly disrupt normal behavior patterns which include, but are not limited to, breeding, feeding or sheltering. [50 CFR §17.3].

Appendix A. Delineation and Justification for Consultation Area

The Consultation Area (Figure 1) represents the general range of the species. The Consultation Area represents the area within which consideration should be given to potential effects to Florida bonneted bats from proposed projects or actions. Coordination and consultation with the Service helps to determine whether proposed actions and activities may affect listed species. This Consultation Area defines the area where proposed actions and activities may affect the Florida bonneted bat.

This area was delineated using confirmed presence data, key habitat features, reasonable flight distances and home range sizes. Where data were lacking, we used available occupancy models that predict probability of occurrence (Bailey *et al.* 2017). Below we describe how each one of these data sources was used to determine the overall Consultation Area.

Presence data: Presence data included locations for: (1) confirmed Florida bonneted bat acoustic detections; (2) known roost sites (occupied or formerly occupied; includes natural roosts, bat houses, and utility poles); (3) live Florida bonneted bats observed or found injured; (4) live Florida bonneted bats captured during research activities; and (5) Florida bonneted bats reported as dead. The Geographic Information Systems (GIS) dataset incorporates information from January 2003 to May 2019.

The vast majority of the presence data came from acoustic surveys. The species' audible, low frequency, distinct, echolocation calls are conducive for acoustic surveys. However, there are limitations in the range of detection from ultrasonic devices, and the fast, high-flying habits of this species can confound this. Overall, detection probabilities for Florida bonneted bats are generally considered to be low. For example, in one study designed to investigate the distribution and environmental associations of Florida bonneted bat, Bailey *et al.* 2017 found overall nightly detection probability was 0.29. Based on the estimated detection probabilities in that study, it would take 9 survey nights (1 detector per night) to determine with 95% certainty whether Florida bonneted bat are present at a sampling point. Positive acoustic detection data are extremely valuable. However, it is important to recognize that there are issues with false negatives due to limitations of equipment, low detection probabilities, difference in detection due to prey availability and seasonal movement over the landscape, and in some circumstances improperly conducted surveys (*i.e.*, short duration or in unsuitable weather conditions).

Key habitat features: We considered important physical and biological features with a focus on potential roosting habitat and applied key concepts of bat conservation (*i.e.*, need to conserve roosting habitat, foraging habitat, and prey base). To date, all known natural Florida bonneted bat roosts (n=19 have been found in live trees and snags of the following types: slash pine, longleaf pine, royal palm, and cypress (Braun de Torrez 2018). Several of the recent roost discoveries are located in fire-maintained vegetation communities, and it appears that Florida bonneted bats are fire-adapted and can benefit from prescribed burn regimes that closely mimic historical fire patterns (Ober *et al.* 2018).

From a landscape and roosting perspective, we consider key habitat features to include forested areas and other areas with mature trees, wetlands, areas used by red-cockaded woodpeckers

(*Picoides borealis*; RCW), and fire-managed and other conservation areas. However, recent work suggests that Florida bonneted bats do not use pinelands more than other land cover types (Bailey *et al.* 2017). In fact, Bailey *et al.* 2017 detected Florida bonneted bats in all land cover types investigated in their study (e.g., agricultural, developed, upland, and wetland). For the purposes of these consultation guidelines, we are focusing on the conservation of potential roosting habitats across the species' range. However, we also recognize the need for comprehensive consideration of foraging habitats, habitat connectivity, and long-term suitability.

Flight distances and home range sizes: Like most bats, Florida bonneted bats are colonial central-place foragers that exploit distant and scattered resources (Rainho and Palmeirim 2011). Morphological characteristics (narrow wings, high wing-aspect ratio) make *Eumops* spp. well-adapted for efficient, low-cost, swift, and prolonged flight in open areas (Findley *et al.* 1972, Norberg and Rayner 1987). Other *Eumops* including Underwood's mastiff bat (*Eumops underwoodi*), and Greater mastiff bat or Western mastiff bat (*Eumops perotis*) are known to forage and/or travel distances ranging from 6.2 miles to 62 miles from the roost with multiple studies documenting flight distances approximately 15- 18 miles from the roost (Tibbitts *et al* 2002, Vaugh 1959 as cited in Best *et al.* 1996, Siders *et al.* 1999, Siders 2005, Vaughan 1959 as cited in Siders 2005.)

Like other *Eumops*, Florida bonneted bats are strong fliers, capable of travelling long distances (Belwood 1992). Recent Global Positioning System (GPS) and radio-telemetry data for Florida bonneted bats documents that they also move large distances and likely have large home ranges. Data from recovered GPS satellite tags on Florida bonneted bats tagged at Babcock-Webb Wildlife Management Area (WMA), found the maximum distance detected from a capture site was 24.2 mi (38.9 km); the greatest path length travelled in a single night was 56.3 mi (90.6 km) (Ober 2016; Webb 2018a-b). Additional data collected during the month of December documented the mean maximum distance of Florida bonneted bats (n=8) with tags traveled from the roost was 9.5 mi (Webb 2018b). The Service recognizes that the movement information comes from only one site (Babcock-Webb WMA and vicinity), and data are from small numbers (n=20) of tagged individuals for only short periods of time (Webb 2018a-b). We expect that across the Florida bonneted bat's range differences in habitat quality, prey availability, and other factors will result in variable habitat use and home range sizes between locations. Foraging distances and home range sizes in high quality habitats are expected to be smaller while foraging distances and home range sizes in low quality habitat would be expected to be larger. Consequently, because Babcock-Webb WMA provides high quality roosting habitat, this movement data could represent the low end of individual flight distances from a roost.

Given the species' morphology and habits (e.g., central-place forager) and considering available movement data from other *Eumops* and Florida bonneted bats discussed above, we opted to use 15 miles (24 km) as a reasonable estimate of the distance Florida bonneted bats would be expected to travel from a roost on any given night. For the purposes of delineating a majority of the Consultation Area, we used available confirmed presence point location data and extended out 15 miles (24 km), with modifications for habitat features (as described above). As more movement data are obtained and made available, this distance estimate may change in the future.

Occupancy model – Research by Bailey *et al.* (2017) indicates the species' range is larger than previously known. Their model performed well across a large portion of the previously known

range when considering confirmed Florid bonneted bat locations; thus it is anticipated to be useful where limited information is available for the species.

We used the model output from Bailey *et al.* (2017) to more closely examine areas where we are data-deficient (*i.e.*, areas where survey information is particularly lacking). We considered 0.27 probability of occurrence a filter for high likelihood of occurrence because 0.27 was the model output for Babcock-Webb WMA, an area where Florida bonneted bats are known to occupy and heavily use. Large portions of Sarasota, Martin, and Palm Beach counties were identified as having probability of occurrence of 0.27. The consultation area should include areas where the species has a high likelihood of occurring. Based on this reasoned approach, all of Sarasota County, portions of Martin County, and greater parts of Palm Beach County were included in the Consultation Area.

We recognize that there are areas in the northern portion of the range where the model is less successful predicting occurrence based on the known Florida bonneted bat locations (*i.e.*, the model predicts low likelihood of occurrence on Avon Park Air Force range, where the species is known to roost). Consequently, the Service is proactively working with partners to conduct surveys in the areas added based on the model to confirm that inclusion of these portions of the aforementioned counties is appropriate. The Consultation Area may be adjusted based on changes in this information.

Appendix B: Full Acoustic / Roost Survey Framework

Purpose: The purpose of this survey is to: (1) determine if Florida bonneted bats are likely to be actively roosting or using the site; (2) locate active roost(s) and avoid the loss of the structure, if possible; and, (3) avoid or minimize the take of individuals. In some cases, changes in project designs or activities can help avoid and minimize take. For example, project proponents may be able to retain suspected roosts or conserve roosting and foraging habitats. Changing the timing or nature of activities can also help reduce the losses of non-volant young or effects to pregnant or lactating females. If properly conducted, acoustic surveys are the most effective way to determine presence and assess habitat use. If the applicant is unable to follow or does not want to follow the Full Acoustic/Roost Survey framework when recommended according to the Key, the Corps (or other Action Agency) will not be able to use these Guidelines and will need to provide a biologically supported rational using the best available information for their determination in their request for consultation.

General Description: This is a *comprehensive survey effort*, and robust acoustic surveys (*i.e.*, surveys conducted 30 minutes prior to sunset to 30 minutes after sunrise, over multiple nights) are a fundamental component of the approach. Depending upon acoustic results and habitat type, it may also include: observations at emergence (*e.g.*, emergence surveys during which observers look and listen for bats to come out of roost structures around sunset), visual inspection of trees/snags (*i.e.*, those with cavities, hollows, and loose bark) and other roost structures with tree-top cameras, or follow-up targeted acoustic surveys. Methods are dependent upon composition and configuration of project site and willingness and ability of applicant and partners to conserve roosting and foraging habitats on site.

General Survey Protocol:

[Note: The Service will provide more information in separate detailed survey protocols in the near future. This will include specific information on: detector types, placement, orientation, verification of proper functioning, analysis, reporting requirements, etc.]

- Approach is intended for project sites > 5 acres (2 hectares).
- For sites containing roosting habitat, acoustic surveys should primarily focus on assessing roosting habitat within the project site that will be lost or modified (*i.e.*, areas that will not be conserved), and locations on the property within 250 feet (76.2 meters) of areas that will not be conserved. This will help avoid or minimize the loss of an active roost and individuals. Secondarily, since part of the purpose is to determine if Florida bonneted bats are using the site, acoustic devices should also be placed near open water and wetlands to maximize chances of detection and aid in assessing foraging habitat that may be lost.
- For sites that do not contain ANY roosting habitat, but do contain foraging habitat (see Figure 3 - Consultation Flowchart and Key, Step 2 [no], Step 13 [yes]), efforts should focus on assessing foraging habitat within the project site that will be lost or modified (*i.e.*, areas that will not be conserved).
- Acoustic surveys should be performed by those who are trained and experienced in setting up, operating, and maintaining acoustic equipment; and retrieving, saving,

analyzing, and interpreting data. Surveyors should have completed one or more of the available bat acoustic courses/workshops, or be able to show similar on-the-job or academic experience (Service 2018).

- Due to the variation in the quality of recordings, the influence of clutter, the changing performances of software packages over time, and other factors, manual verification is recommended (Loeb *et al.* 2015). Files that are identified to species from auto-ID programs must be visually reviewed and manually verified by experienced personnel.
- Acoustic devices should be set up to record from 30 minutes prior to sunset to 30 minutes after sunrise for multiple nights, under suitable weather conditions.
- Acoustic surveys can be conducted any time of year as long as weather conditions meet the criteria. If any of the following weather conditions exist at a survey site during acoustic sampling, note the time and duration of such conditions, and repeat the acoustic sampling effort for that night: (a) temperatures fall below 65°F (18.3°C) during the first 5 hours of survey period; (b) precipitation, including rain and/or fog, that exceeds 30 minutes or continues intermittently during the first 5 hours of the survey period; and (c) sustained wind speeds greater than 9 miles/hour (4 meters/second; 3 on Beaufort scale) for 30 minutes or more during the first 5 hours of the survey period (Service 2018). At a minimum, nightly weather conditions for survey sites should be checked using the nearest NOAA National Weather Service station and summarized in the survey reports. Although not required at this time, it has been demonstrated that conducting surveys on warm nights late in the spring can help maximize detection probabilities (Ober *et al.* 2016; Bailey *et al.* 2017).
- Acoustic devices should be calibrated and properly placed. Microphones should be directed away from surrounding vegetation, not beneath tree canopy, away from electrical wires and transmission lines, away from echo-producing surfaces, and away from external noises. Directional microphones should be aimed to sample the majority of the flight path/zone. Omnidirectional microphones should be deployed on a pole in the center of the flight path/zone and oriented horizontally. For monitoring possible roost sites, microphones should be directed to maximize likelihood of detection.
- To standardize recordings, acoustic device recordings should have a 2-second trigger window and a maximum file length of 15 seconds.
- The number of acoustic survey sites and nights needed for the assessment is dependent upon the overall acreage of suitable habitat proposed to be impacted by the action.
 - For non-linear projects, a minimum of 16 detector nights per 20 acres of suitable habitat expected to be impacted is recommended.
 - For linear projects (e.g., roadways, transmission lines), a minimum of five detector nights per 0.6 mi (0.97 km) is recommended. Detectors can be moved to multiple locations within each kilometer surveyed, but must remain in a single location throughout any given night.
 - For any site, and in particular for sites > 250 acres, please contact the Service to assist in designing an appropriate approach.
- If results of acoustic surveys show **high Florida bonneted bat activity** or **Florida bonneted bat roosting likely** (e.g., high activity early in the evening) (see definitions in Glossary), follow-up methods such as emergence surveys, visual inspection of the roosting structures, or follow-up acoustic surveys are recommended to locate potential roosts. Using a combination of methods may be helpful.

- For bat emergence surveys, multiple observers should be stationed at potential roosts if weather conditions (as above) are suitable. Surveyors should be quietly stationed 30 minutes before sunset so they are ready to look and listen for emerging FBBs from sunset to 1½ hours after sunset. When conducting emergence surveys it is best to orient observers so that the roost is silhouetted in the remaining daylight; facing west can help maximize the ability to notice movement of animals out of a roost structure.
- Visual inspection of trees with cavities and loose bark during the day may be helpful. Active RCW trees should not be visually inspected during the RCW breeding season (April 15 through June 15).
- Visual inspection alone is not recommended due to the potential for roosts to be too high for cameras to reach, too small for cameras to fit, or shaped in a way that contents are out of view (Braun de Torrez *et al.* 2016).
- If roosting is suspected on site, use tree-top cameras during the day to search those trees/snags or other structures that have potential roost features (*i.e.*, cavities, hollows, crevices, or other structure for permanent shelter). If unsuccessful (*e.g.*, cannot see entire contents within a given cavity, cannot reach cavity, cannot see full extent of cavity) OR occupied roosts are found with the tree-top camera within the area in which high Florida bonneted bat activity/likely Florida bonneted bats roosting were identified, we recommend emergence surveys and/or acoustics to verify occupancy and/or identify bat species.
- Provide report showing effort, methods, weather conditions, findings, and summary of acoustic data relating to Florida bonneted bats (*e.g.*, # of calls, time of calls, and station number) organized by the date on which the data were collected. Sonograms of all calls with signatures at or below 20kHz shall be included in the report. The report shall be provided to the Corps project manager assigned to the project for which the survey was conducted and to the Service via the email address **verobeach@fws.gov**. **Raw acoustic data should be provided to the Service for all surveys.** **Raw acoustic data should be provided as “all raw data” and “all raw data with signatures at or below 20kHz”.** **Data can be submitted to the Service via flash drive, memory stick, or hard drive.** **Data can be submitted digitally to verobeach@fws.gov or via mail to U.S. Fish and Wildlife Service, Attn: Florida bonneted bat data manager, 1339 20th Street, Vero Beach, Florida 32960.**
- Negative surveys are valid for 1 year after completion of the survey.

If you have comments, or suggestions on this survey protocols, please email your comments to FBBguidelines@fws.gov. These comments will be reviewed and incorporated in an annual review.

Appendix C: Limited Roost Survey Framework

Purpose: The purpose of this survey is to: (1) determine if Florida bonneted bats are likely to be actively roosting within suitable structures on-site; (2) locate active roost(s) and avoid the loss of the structure, if possible; and, (3) avoid or minimize the take of individuals. In some cases, changes in project designs or activities can help avoid and minimize take. For example, applicants and partners may be able to retain the suspected roosts or conserve roosting and foraging habitats. Changing the timing of activities can also help reduce the losses of non-volant young or effects to pregnant or lactating females.

General Description: This is a *reduced survey effort* that may include the following methods: visual inspection of trees/snags (*i.e.*, those with cavities, hollows, and loose bark) and other roost structures with tree-top cameras, observations at emergence (*e.g.*, emergence surveys during which observers look and listen for bats to come out of roost structures around sunset), acoustic surveys, or a combination of these methods. Methods are fairly flexible and dependent upon composition and configuration of project site and willingness and ability of applicant and partners to conserve roosting habitat on site.

General Survey Protocol:

[Note: The Service will provide more information in separate, detailed survey protocols in the near future. This will include specific information on: detector types, placement, orientation, verification of proper functioning, analysis, reporting requirements, etc.]

- Approach is **intended only for small project sites** (*i.e.*, sites \leq 5 acres [2 hectares]).
- Efforts should focus on assessing potential roosting structures within the project site that will be lost or modified (*i.e.*, areas that will not be conserved), or are located on the property within 250 feet (76.2 meters) of areas that will not be conserved.

Identification of potential roost structures

- This step is necessary prior to any of the methods that follow.
- Run line transects through roosting habitat close enough that all trees and snags are easily inspected. Transect spacing will vary with habitat structure and season from a maximum of 91 m (300 ft) between transects in very open pine stands to 46 m (150 ft) or less in areas with dense mid-story. Transects should be oriented north to south, to optimize cavity detectability because many RCW cavity entrances are oriented in a westerly direction (Service 2004).
- Visually inspect all trees and snags or other structures for evidence of cavities, hollows, crevices that can be used for permanent shelter. Using binoculars, examine structures for cavities, loose bark, hollows, or other crevices that are large enough for Florida bonneted bats (diameter of opening $>$ or $=$ to 1 inch (2.5 cm) (Braun de Torrez *et al.* 2016).
- When potential roosting structures are found, record their location in the field using a Global Positioning System (GPS) unit.

Visual Inspection of trees and snags with tree-top cameras

- Visually inspect all cavities using a video probe (peeper) and assess the cavity contents.

Active RCW trees should not be visually inspected during the RCW breeding season (April 15 through June 15).

- Visual inspection alone is valid only when the entire cavity is observed and the contents can be identified. Typically, acoustics at emergence will also be needed to definitively identify bat species, if bats are present or suspected.
- If bats are suspected, or if contents cannot be determined, or if the entire cavity cannot be observed with the video probe; follow methods for an Acoustic Survey or an Emergence Survey (below). If the Corps (or other action agency) or applicant does not wish to conduct acoustic or emergence surveys, the Corps (or other action agency) cannot use the key and must request formal consultation with the Service.
- Record tree species or type of cavity structure, tree diameter and height, cavity height, cavity orientation and cavity contents.

Emergence Surveys

- For bat emergence surveys, multiple observers should be stationed at potential roosts if weather conditions (as described below in Acoustic Surveys) are suitable.
- Surveyors should be quietly stationed 30 minutes prior to sunset so they are ready to look and listen for emerging Florida bonneted bats from sunset to 1½ hours after sunset.
- When conducting emergence surveys it is best to orient observers so that the roost is silhouetted in the remaining daylight; facing west can help maximize the ability to notice movement of animals out of a roost structure.
- Record number of bats that emerged, the time of emergence, and if bat calls were heard.

Acoustic surveys

- Acoustic surveys should be performed by those who are trained and experienced in setting up, operating, and maintaining acoustic equipment; and retrieving, saving, analyzing, and interpreting data. Surveyors should have completed one or more of the available bat acoustic courses/workshops, or be able to show similar on-the-job or academic experience (Service 2018).
- Due to the variation in the quality of recordings, the influence of clutter, and the changing performances of software packages over time, and other factors, manual verification is recommended (Loeb *et al.* 2015). Files that are identified to species from auto-ID programs must be visually reviewed and manually verified by experienced personnel.
- Acoustic devices should be set up to record from 30 minutes prior to sunset to 30 minutes after sunrise for multiple nights, under suitable weather conditions.
- Acoustic surveys can be conducted any time of year as long as weather conditions meet the criteria. If any of the following weather conditions exist at a survey site during acoustic sampling, note the time and duration of such conditions, and repeat the acoustic sampling effort for that night: (a) temperatures fall below 65°F (18.3°C) during the first 5 hours of survey period; (b) precipitation, including rain and/or fog, that exceeds 30 minutes or continues intermittently during the first 5 hours of the survey period; and (c) sustained wind speeds greater than 9 miles/hour (4 meters/second; 3 on Beaufort scale) for 30 minutes or more during the first 5 hours of the survey period (Service 2018). At a minimum, nightly weather conditions for survey sites should be checked using the nearest NOAA National Weather Service station and summarized in the survey reports. Although not required at this time, it has been demonstrated that conducting surveys on

warm nights late in the spring can help maximize detection probabilities (Ober *et al.* 2016; Bailey *et al.* 2017).

- Acoustic devices should be calibrated and properly placed. Microphones should be directed away from surrounding vegetation, not beneath tree canopy, away from electrical wires and transmission lines, away from echo-producing surfaces, and away from external noises. Directional microphones should be aimed to sample the majority of the flight path/zone. Omnidirectional microphones should be deployed on a pole in the center of the flight path/zone and oriented horizontally. For monitoring possible roost sites, microphones should be directed to maximize likelihood of detection.
- To standardize recordings, acoustic device recordings should have a 2-second trigger window and a maximum file length of 15 seconds.
- Acoustic surveys should be conducted over a minimum of four nights.
- If acoustic devices cannot be left in place for the entire night for multiple nights as above, then a combination of short acoustic surveys (from sunset and extending for 1½ hours), stationed observers for emergence surveys or visual inspection of trees/snags with tree-top cameras may be acceptable. Contact the Service for guidance under this circumstance.

Reporting

- Provide report showing effort, methods, weather conditions, findings, and summary of acoustic data relating to Florida bonneted bat by date (e.g., # of calls, time of calls). Sonograms of all calls with signatures at or below 20kHz shall be included in the report. The report shall be provided to the Corps project manager assigned to the project for which the survey was conducted and to the Service via the email address **verobeach@fws.gov**. **Raw acoustic data should be provided to the Service for all surveys. Raw acoustic data should be provided as “all raw data” and “all raw data with signatures at or below 20kHz”. Data can be submitted to the Service via flash drive, memory stick, or hard drive. Data can be submitted digitally to verobeach@fws.gov or via mail to U.S. Fish and Wildlife Service, Attn: Florida bonneted bat data manager, 1339 20th Street, Vero Beach, Florida 32960.**
- Negative surveys are valid for 1 year after completion of the survey

If you have comments, or suggestions on this survey protocols, please email your comments to FBBguidelines@fws.gov. These comments will be reviewed and incorporated in an annual review.

Appendix D: Best Management Practices (BMPs) for Development Projects

Ongoing research and monitoring will continue to increase the understanding of the Florida bonneted bat and its habitat needs and will continue to inform habitat and species management recommendations. These BMPs incorporate what is known about the species and also include recommendations that are beneficial to all bat species in Florida. These BMPs are intended to provide recommendations for improving conditions for use by Florida bonneted bats, and to help conserve Florida bonneted bats that may be foraging or roosting in an area.

The BMPs required to reach a “may affect, but is not likely to adversely affect” (MANLAA) determination vary depending on the couplet from the Consultation Key used to reach that particular MANLAA. The requirements for each couplet are provided below followed by the list of BMPs. If the applicant is unable or does not want to do the required BMPs, then the Corps (or other Action Agency) will not be able to use this Guidance and formal consultation with the Service is required.

Couplet Number for MANLAA from Consultation Key	Required BMPs
4b	BMP number 1 if more than 3 months has occurred between the survey and start of the project, and any 3 BMPs out of BMPs 4 through 13
5b	BMP number 2, and any 3 BMPs out of BMPs 3 through 13
9b	BMPs number 2 and 3, and any 4 BMPs out of BMPs 5 through 13
11b	BMPs number 1 and 4, and any 4 BMPs out of BMPs 5 through 13
12b	BMP number 1, and any 3 BMPs out of BMPs 3 through 13
14b	Any 2 BMPs out of BMPs 3 through 13
15b	Any 3 BMPs out of BMPs 3 through 13
17b	Any 4 BMPs out of BMPs 3 through 13

BMPs for development, construction, and other general activities:

1. If potential roost trees or structures need to be removed, check cavities for bats within 30 days prior to removal of trees, snags, or structures. When possible, remove structure outside of breeding season (*e.g.*, January 1 – April 15). If evidence of use by any bat species is observed, discontinue removal efforts in that area and coordinate with the Service on how to proceed.
2. When using heavy equipment, establish a 250 foot (76 m) buffer around known or suspected roosts to limit disturbance to roosting bats.
3. For every 5 acres of impact, retain a minimum of 1.0 acre of native vegetation. If upland habitat is impacted, then upland habitat with native vegetation should be retained.
4. For every 5 acres of impact, retain a minimum of 0.25 acre of native vegetation. If upland habitat is impacted, then upland habitat with native vegetation should be retained..
5. Conserve open freshwater and wetland habitats to promote foraging opportunities and avoid impacting water quality. Created/restored habitat should be designed to replace the function of native habitat.

6. Conserve and/or enhance riparian habitat. A 50-ft (15.2 m) buffer is recommended around water bodies and stream edges. In cases where artificial water bodies (*i.e.*, stormwater ponds) are created, enhance edges with native plantings especially in cases in which wetland habitat was affected.
7. Avoid or limit widespread application of insecticides (*e.g.*, mosquito control, agricultural pest control) in areas where Florida bonneted bats are known or expected to forage or roost.
8. Conserve natural vegetation to promote insect diversity, availability, and abundance. For example, retain or restore 25% of the parcel in native contiguous vegetation.
9. Retain mature trees and snags that could provide roosting habitat. These may include live trees of various sizes and dead or dying trees with cavities, hollows, crevices, and loose bark. See “Roosting Habitat” in “Background” above.
10. Protect known Florida bonneted bat roost trees, snags or structures and trees or snags that have been historically used by Florida bonneted bats for roosting, even if not currently occupied, by retaining a 250 foot (76 m) disturbance buffer around the roost tree, snag, or structure to ensure that roost sites remain suitable for use in the future.
11. Avoid and minimize the use of artificial lighting, retain natural light conditions, and install wildlife friendly lighting (*i.e.*, downward facing and lowest lumens possible). Avoid permanent night-time lighting to the greatest extent practicable.
12. Incorporate engineering designs that discourage bats from using buildings or structures. If Florida bonneted bats take residence within a structure, contact the Service and Florida Fish and Wildlife Conservation Commission prior to attempting removal or when conducting maintenance activities on the structure.
13. Use or allow prescribed fire to promote foraging habitat.

Appendix E: Additional Best Management Practices (BMPs) for Land Management Projects

Ecological Land Management

The Service reviews and develops Ecological Land Management projects that use land management activities to restore and maintain native, natural communities that are beneficial to bats. These activities include prescribed fire, mechanical treatments to reduce vegetation densities, timber thinning to promote forest health, trail maintenance, and the treatment of exotic vegetation. The following BMPs provide recommendations for conserving Florida bonneted bat roosting and foraging habitat during ecological land management activities. The Service recommends incorporating these BMP into ecological land management plans.

If potential roost trees need to be removed, check cavities for bats prior to removal of trees or snags. If evidence of use by any bat species is observed, discontinue removal efforts in that area and coordinate with the Service on how to proceed.

Ecological Land Management BMPs:

- Protect potential roosting habitat during ecological land management activities, if feasible. Avoid removing trees or snags with cavities.
- Rake and/or manually clear vegetation around the base of known or suspected roost trees to remove fuel prior to prescribed burning.
- If possible, use ignition techniques such as spot fires or backing fire to limit the intensity of fire around the base of the tree or snag containing the roost. The purpose of this action is to prevent the known or suspected roost tree or snag from catching fire and also to attempt to limit the exposure of the roosting bats to heat and smoke. A 250-ft (76 m) buffer is recommended.
- If prescribed fire is being implemented to benefit Florida bonneted bats, Braun de Torrez et al. (2018) noted that fire in the dry/spring season could be most beneficial.
- When creating firebreaks or conducting fire-related mechanical treatment, mark and avoid any known or suspected bat roosts.
- When using heavy equipment, establish a buffer of 250 feet (76 m) around known roosts to limit disturbance to roosting bats.
- Establish forest management efforts to maintain tree species and size class diversity to ensure long-term supply of potential roost sites.
- For every 5 acres (2 hectares) of timber that is harvested, retain a clump of trees 1-2 acres (0.4 - 0.8 hectare) in size containing potential roost trees, especially pines and royal palms (live or dead). Additionally, large snags in open canopy should be preserved.

Florida Bonneted Bat Consultation key

Florida Bonneted Bat Consultation Key[#]

Use the following key to evaluate potential effects to the Florida bonneted bat (FBB) from the proposed project. Refer to the Glossary as needed.

- 1a. Proposed project or land use change is partially or wholly within the Consultation Area (Figure 1) **Go to 2**
- 1b. Proposed project or land use change is wholly outside of the Consultation Area (Figure 1) **No Effect**

- 2a. Potential FBB roosting habitat exists within the project area..... **Go to 3**
- 2b. No potential FBB roosting habitat exists within the project area..... **Go to 13**

- 3a. Project size/footprint* ≤ 5 acres (2 hectares) **Conduct Limited Roost Survey (Appendix C)** then **Go to 4**
- 3b. Project size/footprint* > 5 acres (2 hectares) **Conduct Full Acoustic/Roost Surveys (Appendix B)** then **Go to 6**

- 4a. Results show FBB roosting is likely **Go to 5**
- 4b. Results do not show FBB roosting is likely..... **MANLAA-P if BMPs (Appendix D) used and survey reports are submitted. Programmatic concurrence.**

- 5a. Project will affect roosting habitat..... **LAA+ Further consultation with the Service required.**
- 5b. Project will not affect roosting habitat..... **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 6a. Results show some FBB activity..... **Go to 7**
- 6b. Results show no FBB activity..... **No Effect**

- 7a. Results show FBB roosting is likely..... **Go to 8**
- 7b. Results do not show FBB roosting is likely..... **Go to 10**

- 8a. Project will not affect roosting habitat..... **Go to 9**
- 8b. Project will affect roosting habitat..... **LAA+ Further consultation with the Service required.**

- 9a. Project will affect* > 50 acres (20 hectares) (wetlands and uplands) of foraging habitat..... **LAA+ Further consultation with the Service required.**
- 9b. Project will affect* ≤ 50 acres (20 hectares) (wetlands and uplands) of foraging habitat..... **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 10a. Results show high FBB activity/use..... **Go to 11**
- 10b. Results do not show high FBB activity/use..... **Go to 12**

- 11a. Project will affect* > 50 acres (20 hectares) (wetlands and uplands) of FBB habitat (roosting and/or foraging) **LAA+ Further consultation with the Service required.**
- 11b. Project will affect* ≤ 50 acres (20 hectares) (wetlands and uplands) of FBB habitat (roosting and/or foraging) **MANLAA-C with required BMPs (Appendix D). Further consultation with the Service required.**

- 12a. Project will affect* > 50 acres (20 hectares) (wetlands and uplands) of FBB habitat..... **LAA+ Further consultation with the Service required.**

- 12b. Project will affect* ≤ 50 acres (20 hectares) (wetlands and uplands) of FBB habitat..... **MANLAA-P if BMPs (Appendix D) used and survey reports are submitted. Programmatic concurrence.**

- 13a. FBB foraging habitat exists within the project area and foraging habitat will be affected..... **Go to 14**
- 13b. FBB foraging habitat exists within the project area and foraging habitat will not be affected **OR** no FBB foraging

habitat exists within the project area..... **No Effect**

14a. Project size* > 50 acres (20 hectares) (wetlands and uplands) **Go to 15**

14b. Project size* ≤ 50 acres (20 hectares) (wetlands and uplands) **MANLAA-P if BMPs (Appendix D) used. Programmatic concurrence.**

15a. Project is within 8 miles (12.9 kilometers) of high quality potential roosting areas[^]..... **Conduct Full Acoustic Survey (Appendix B) and Go to 16**

15b. Project is not within 8 miles (12.9 kilometers) of high quality potential roosting area[^]..... **MANLAA-P if BMPs (Appendix D) used. Programmatic concurrence.**

16a. Results show some FBB activity..... **Go to 17**

16b. Results show no FBB activity..... **No Effect**

17a. Results show high FBB activity/use..... **LAA+ Further consultation with the Service required.**

17b. Results do not show high FBB activity/use..... **MANLAA-P if BMPs (Appendix D) used and survey reports submitted. Programmatic concurrence.**

If you are within the urban environment and you are renovating an existing artificial structure (with or without additional ground disturbing activities), these Guidelines do not apply. The Service is developing separate guidelines for consultation in these situations. Until the urban guidelines are complete, please contact the Service for additional guidance.

*Includes wetlands and uplands that are going to be altered along with a 250- foot (76.2- meter) buffer around these areas if the parcel is larger than the altered area.

⁺Project modifications could change the **LAA** determinations in numbers 5, 8, 9, 11, 12, and 17 to **MANLAA** determinations.

[^]Determining if **high quality potential roosting areas** are within 8 mi (12.9 km) of a project is intended to be a desk-top exercise looking at most recent aerial imagery, not a field exercise.

ATTACHMENT H

Wood Stork Determination Key

Wood stork Determination Key – Broadview Park

- A. Project within 0.76 km (0.47 mile)² of an active colony site³ “may affect”
 - Project impacts Suitable Foraging Habitat (SFH) ~ at a location greater than 0.76 km (0.47 mile) from a colony site..... “go to B”
 - Project does not affect SFH..... “no effect”
 - B. Project impact to SFH is less than 0.20-hectare (one-half acre)⁶ NLAA¹
 - Project impact to SFH is greater in scope than 0.20-hectare (one-half acre) go to C
 - C. Project impacts to SFH not within the CFA (29.9 km, 18.6 miles) of a colony site..... go to D
 - Project impacts to SFH within the CFA of a colony site go to E
 - D. Project impacts to SFH have been avoided and minimized to the extent practicable; compensation (Service approved mitigation bank or as provided in accordance with Mitigation Rule 33 CFR Part 332) for unavoidable impacts is proposed in accordance with the CWA section 404(b)(1) guidelines; and habitat compensation replaces the foraging value matching the hydroperiod⁷ of the wetlands affected and provides foraging value similar to, or higher than, that of impacted wetlands. See Enclosure 3 for a detailed discussion of the hydroperiod foraging values, an example, and further guidance⁸ NLAA¹
 - Project not as above..... “may affect”
 - E. Project provides SFH compensation in accordance with the CWA section 404(b)(1) guidelines and is not contrary to the HMG; habitat compensation is within the appropriate CFA or within the service area of a Service-approved mitigation bank; and habitat compensation replaces foraging value, consisting of wetland enhancement or restoration matching the hydroperiod⁷ of the wetlands affected, and provides foraging value similar to, or higher than, that of impacted wetlands. See Enclosure 3 for a detailed discussion of the hydroperiod foraging values, an example, and further guidance⁸ NLAA”
- Project does not satisfy these elements “may affect”

¹ With an outcome of “no effect” or “NLAA” as outlined in this key, and the project has less than 20.2 hectares (50 acres) of wetland impacts, the requirements of section 7 of the Act are fulfilled for the wood stork and no further action is required. For projects with greater than 20.2 hectares (50 acres) of wetland impacts, written concurrence of NLAA from the Service is necessary.

² Within the secondary zone (the average distance from the border of a colony to the limits of the secondary zone is 0.76 km (2,500 feet, or 0.47 mi).

³ An active colony is defined as a colony that is currently being used for nesting by wood storks or has historically over the last 10 years been used for nesting by wood storks.

⁴ Consultation may be concluded informally or formally depending on project impacts.

⁵ Suitable foraging habitat (SFH) includes wetlands that typically have shallow-open water areas that are relatively calm and have a permanent or seasonal water depth between 5 to 38cm (2 to 15 inches) deep. Other shallow nonwetland water bodies are also SFH. SFH supports and concentrates, or is capable of supporting and concentrating small fish, frogs, and other aquatic prey. Examples of SFH include, but are not limited to freshwater marshes, small ponds, shallow, seasonally flooded roadside or agricultural ditches, seasonally flooded pastures, narrow tidal creeks or shallow tidal pools, managed impoundments, and depressions in cypress heads and swamp sloughs.

⁶ On an individual basis, SFH impacts to wetlands less than 0.20 hectare (one-half acre) generally will not have a measurable effect on wood storks, although we request that the Corps require mitigation for these losses when appropriate. Wood storks are a wide-ranging species, and individually, habitat change from impacts to SFH less than one-half acre are not likely to adversely affect wood storks. However, collectively they may have an effect and therefore regular monitoring and reporting of these effects are important.

⁷ Several researchers (Flemming et al. 1994; Ceilley and Bortone 2000) believe that the short hydroperiod wetlands provide a more important pre-nesting foraging food source and a greater early nestling survivor value for wood storks than the foraging base (grams of fish per square meter) than long hydroperiod wetlands provide. Although the short hydroperiod wetlands may provide less fish, these prey bases historically were more extensive and met the foraging needs of the pre-nesting storks and the early-age nestlings. Nest productivity may suffer as a result of the loss of short hydroperiod wetlands. We believe that most wetland fill and excavation impacts permitted in south Florida are in short hydroperiod wetlands. Therefore, we believe that it is especially important that impacts to these short hydroperiod wetlands within CFAs are avoided, minimized, and compensated for by enhancement/restoration of short hydroperiod wetlands.

⁸ For this Key, the Service requires an analysis of foraging prey base losses and enhancements from the proposed action as shown in the examples in Enclosure 3 for projects with greater than 2.02 hectares (5 acres) of wetland impacts. For projects with less than 2.02 hectares (5 acres) of wetland impacts, an individual foraging prey base analysis is not necessary although type for type wetland compensation is still a requirement of the Key.

ATTACHMENT I

Meeting Minutes with USFWS

(January 19, 2024)

Section 7 Consultation Meeting Minutes

Date: 1/19/2024

Attendees:

- John Wrublik, US Fish and Wildlife Service (USFWS)
- Anh Ton, Broward County
- Millie Radzikovsky, BMA-CE Consulting Inc.

Projects:

- Broward County Green Infrastructure Stormwater Drainage System Project (Broadview Park)
- Broward County Boulevard Gardens Stormwater Improvements
- Broward County Replacement of Andrews Avenue Bridge #860159
- Broward County Replacement of NE 56th Street Bridge #864065
- Andrews Avenue Bridge #860319 Over New River - Scour Protection
- SE 3rd Avenue Bridge #864071 Over New River - Scour Protection
- SW 4/7 Avenue Bridge (864072) Scour Protection

Millie started the meeting by introducing the attendees and projects. The seven projects are all grant funded projects from the State of Florida, Department of Economic Opportunity (DEO) and the Florida Department of Environmental Protection (FDEP). The Broward County Green Infrastructure Stormwater Drainage System Project (Broadview Park) is a grant from DEO, while the remaining six projects on the list are grants from FDEP.

John stated that Section 7 Consultation concurrence on the determination of effect should be requested by a federal agency to USFWS. John can only provide guidance on Section 7 Consultation to the County.

Request for Section 7 Consultation for transportation projects can be submitted to John Wrublik, while all other requests for Section 7 Consultation can be submitted to the Vero Beach USFWS office.

This is the meeting minutes for the above referenced projects. Please provide any changes/comments within seven days after receiving this meeting minutes to Millie Radzikovsky, mradzikovsky@broward.org. The meeting minutes will be revised per comments received.

Broward County Green Infrastructure Stormwater Drainage System Project (Broadview Park)

Millie described the Project Description, Existing Conditions and Broward County's determinations of "effect" on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - "**No effect**"
- Florida bonneted bat (*Eumops floridanus*) - "**May affect, but not likely to adversely affect**" (**MANLAA**). Programmatic occurrence.

Section 7 Consultation Meeting Minutes

Date: 1/19/2024

- Scrub jay - **“No effect” - “No effect”**
- Wood stork - **“No effect”**
- West Indian Manatee - **“No effect”**
- Eastern Indigo Snake- **“No effect”**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

Broward County Boulevard Gardens Stormwater Improvements

Millie described the Project Description, Existing Conditions and Broward County's determinations of “effect” on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - **“No effect”**
- Florida bonneted bat (*Eumops floridanus*) - **“May affect, but not likely to adversely affect” (MANLAA)**. Programmatic occurrence.
- Scrub jay - **“No effect” - “No effect”**
- Wood stork - **“No effect”**
- West Indian Manatee - **“No effect”**
- Eastern Indigo Snake- **“No effect”**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

Broward County Replacement of Andrews Avenue Bridge #860159

Millie described the Project Description, Existing Conditions and Broward County's determinations of “effect” on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Section 7 Consultation Meeting Minutes

Date: 1/19/2024

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - **“No effect”**
- Florida bonneted bat (*Eumops floridanus*) - **“No effect”**
- Scrub jay - **“No effect”** - **“No effect”**
- Wood stork - **“No effect”**
- West Indian Manatee - **“May affect, not likely to adversely affect (MANLAA)”** the manatee.
- Eastern Indigo Snake- **“No effect”**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

Broward County Replacement of Andrews Avenue Bridge #860159

Millie described the Project Description, Existing Conditions and Broward County's determinations of “effect” on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - **“No effect”**
- Florida bonneted bat (*Eumops floridanus*) - **“No effect”**
- Scrub jay - **“No effect”** - **“No effect”**
- Wood stork - **“No effect”**
- West Indian Manatee - **“May affect, not likely to adversely affect (MANLAA)”** the manatee.
- Eastern Indigo Snake- **“No effect”**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

Andrews Avenue Bridge #860319 Over New River - Scour Protection

Millie described the Project Description, Existing Conditions and Broward County's determinations of “effect” on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

Section 7 Consultation Meeting Minutes

Date: 1/19/2024

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - **"No effect"**
- Florida bonneted bat (*Eumops floridanus*) - **"May affect, but is not likely to adversely affect (MANLAA)** – Programmatic concurrence (P) if Best Management Practices (BMPs) (Appendix D) are used and survey reports are submitted.
- Scrub jay - **"No effect"** - **"No effect"**
- Wood stork - **"No effect"**
- West Indian Manatee - **"May affect, not likely to adversely affect (MANLAA)"** the manatee.
- Eastern Indigo Snake- **"No effect"**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

SE 3rd Avenue Bridge #864071 Over New River - Scour Protection

Millie described the Project Description, Existing Conditions and Broward County's determinations of "effect" on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)
- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - **"No effect"**
- Florida bonneted bat (*Eumops floridanus*) - **"May effect but is not likely to adversely affect (MANLAA)** – Programmatic concurrence (P) if Best Management Practices (BMPs) (Appendix D) are used and survey reports are submitted.
- Scrub jay - **"No effect"** - **"No effect"**
- Wood stork - **"No effect"**
- West Indian Manatee - **"May affect, not likely to adversely affect (MANLAA)"** the manatee.
- Eastern Indigo Snake- **"No effect"**

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

SW 4/7 Avenue Bridge (864072) Scour Protection

Millie described the Project Description, Existing Conditions and Broward County's determinations of "effect" on the following species. See attached agenda.

- Snail kite (*Rostrhamus sociabilis*)

Section 7 Consultation Meeting Minutes

Date: 1/19/2024

- Florida bonneted bat (*Eumops floridanus*)
- Scrub jay
- Wood stork
- West Indian Manatee
- Eastern Indigo Snake

The species listed are all within USFWS' Consultation Area.

Broward County's determination for the above species were:

- Snail kite (*Rostrhamus sociabilis*) - "**No effect**"
- Florida bonneted bat (*Eumops floridanus*) - "**May effect but is not likely to adversely affect (MANLAA)**" – Programmatic concurrence (P) if Best Management Practices (BMPs) (Appendix D) are used and survey reports are submitted.
- Scrub jay - "**No effect**"
- Wood stork - "**No effect**"
- West Indian Manatee - "**May affect, not likely to adversely affect (MANLAA)**" the manatee.
- Eastern Indigo Snake- "**No effect**"

John agreed with the County's determinations. John also noted that research on historical data for the existence of Eastern Indigo Snakes, within a 0.52 miles radius of the project limits should be investigated.

Commitments

- Broward County will submit the Florida Bat Florida Bonneted Bat Survey Technical Memorandum, for each project, to USFWS
- Broward County will implement the Standard Manatee Conditions for In-water Work during construction.

Meeting adjourned at 1:48 PM

This email originated from outside the Broward County email system. Do not reply, click links, or open attachments unless you recognize the sender's email address (not just the name) as legitimate and know the content is safe. Report any suspicious emails to ETS Security by selecting the Phish Alert Report button.

Dear Ms. Radzikovsky:

Florida Fish and Wildlife Conservation Commission (FWC) staff reviewed your submittal regarding the proposed Broward County Broadview Park Green Infrastructure Stormwater Drainage System Project in accordance with our authorities under Chapter 379, Florida Statutes. We have no comments, recommendations, or objections related to fish and wildlife or listed species and their habitat to offer on this project at this time.

The liability to not impact or cause "take" of listed species, migratory wildlife, and other regulated species of wildlife is the responsibility of the applicant or developer associated with this site. Please refer to Chapter 68A-27, Florida Administrative Code, for definitions of "take" and a list of species. If listed species are observed onsite in the future, FWC staff are available to provide decision support information or assist in obtaining the appropriate permits.

If you need any further assistance, please do not hesitate to contact our office by email at ConservationPlanningServices@MyFWC.com.

Sincerely,

Laura DiGruttolo

Subject: Initial Correspondence Package for Broadview Park Green Infrastructure Stormwater Drainage System Project - Email #1

[EXTERNAL SENDER] Use Caution opening links or attachments

Good afternoon, Mr. Sutton<

In accordance with the Coastal Zone Management Act and Presidential Executive Order 12372, Broward County is sending you the Initial Correspondence Package for consistency review.

Due to the size of the Initial Correspondence Package, I am sending you two emails.

This is the first email which consists of the letter to you and Attachment 1.

The second email consists of Attachment 2.

Thank you,

Millie

FPPA Exemption Letter (February 27, 2024)

February 27, 2024

Millie Radzikovsky
BMA Consulting Engineering, Inc.
16928 SW 35th Street
Miramar, FL 33027
(954) 744 - 4691
MRADZIKHOVSKY@broward.org

Dear Millie Radzikovsky:

The following guidance is provided for your information.

The Natural Resources Conservation Service (NRCS) has reviewed the: Broadview Park Green Infrastructure Stormwater Drainage System Project

The Agriculture and Food Act of 1981, (Public Law 97-98) containing the Farmland Protection Policy Act (FPPA)—Subtitle I of Title XV, Section 1539-1549, is intended to minimize the impact federal programs have on the unnecessary and irreversible conversion of farmland to nonagricultural uses. Projects are subject to FPPA requirements if they may irreversibly convert farmland (directly or indirectly) to nonagricultural use and are completed by a federal agency or with assistance from a federal agency. There are however exemptions to FPPA.

Section 1540(b) of the Act, 7 U.S.C. 4201(b), states that the purpose of the Act is to minimize the extent to which Federal programs contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses. Based on the information provided for the area of interest located in Broward County, Florida; the area in question meets criteria for an exemption since the location was previously disturbed, no new conversion of farmland would be taking place. The project is exempt from FPPA according to the Code of Federal Regulation 7CFR 658, Farmland Protection Policy Act, Section 658.2 & 658.3. You are exempt from filling the AD1006 at this time. Use this letter as proof of exemption. No further action with regard to FPPA is required on your part.

If you have any questions concerning the soils or interpretations for this project please email me, josue.aceitunodiaz@usda.gov

Broadview Park Desktop CRAS

TECHNICAL MEMORANDUM
BROADVIEW PARK DESKTOP REVIEW
BROADVIEW PARK, FT. LAUDERDALE, BROWARD COUNTY, FLORIDA

CONSULTANT:	SEARCH
PRINCIPAL INVESTIGATORS:	Angelique Theriot, MA; Kristina Altes, PhD, RPA
PROJECT MANAGER:	Timothy Parsons, PhD, RPA
CLIENT:	FG Construction
DATE:	April 2024
SEARCH PROJECT #:	230332

SEARCH conducted an archaeological and architectural history desktop review on behalf of FG Construction for proposed stormwater management improvements in the Broadview Park neighborhood, Ft. Lauderdale, Broward County, Florida (Project). The desktop review covers 222 hectares (ha) (548 acres [ac]) roughly bounded by Davie Boulevard, State Route (SR) 7, the North New River Canal, and Florida's Turnpike (Study Area) (**Figure 1**). The purpose of this desktop review is to determine if SEARCH recommends cultural resources survey within the Study Area, based on the presence of previously recorded cultural resources, environmental data review, land use history, and proposed Project characteristics.

The Project is federally funded by the Community Development Block Grant Mitigation Program, administered through the Florida Department of Economic Opportunity's (DEO) Florida Build Program. This report was completed to fulfill the requirements of Broward County's grant agreement with DEO. The SEARCH archaeologists and architectural historians who completed this desktop review meet the qualifications established in the *Secretary of the Interior's Standards and Guidelines* (48 FR 44716).

ENVIRONMENTAL OVERVIEW

The Study Area is in a heavily developed part of Fort Lauderdale in Broward County, Florida. The North New River Canal forms the southwestern boundary of the Study Area and joins the South Fork of the New River approximately 2.2 km (1.4 mi) to the east. Several smaller canals and retention ponds are present in the surrounding area. The Study Area is in the Andytown Ridges and Sloughs subprovince of the Everglades physiographic province, which is part of the larger Gold Coast-Florida Bay District, as defined by Brooks (1981). This subprovince is characterized by saw grass marsh with tree islands and sloughs (Brooks 1981). Elevations within the Study Area range from approximately 0.6 m (2.0 ft) to 6 m (20 ft), with the highest elevations near the center of the Study Area (USGS 2021).

Figure 1. Broadview Park Study Area

The soils mapped by the US Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) are provided in **Table 1** and **Figure 2**. Over 40% of the mapped soils in the Study Area are classified as poorly to somewhat poorly drained soils, and nearly all soils within the Study Area are classified as urban land or urban land complex. The best drained soils are concentrated in the northern, central, and eastern parts of the Study Area.

Table 1. Soil Type and Drainage within Study Area.

Soil Type and Symbol	Drainage Classification	Acreage	Percentage
Immokalee-Urban land complex	Poorly drained	147.5	26.9%
Margate fine sand, occasionally ponded, 0% to 1% slopes		1.7	0.3%
Arents-Urban land complex	Somewhat poorly drained	10.2	1.9%
Matlacha, limestone substratum-Urban land complex		50.4	9.2%
Udorthents-Urban land complex		15.9	2.9%
Duette-Urban land complex	Moderately well drained	82.1	15.0%
Dade-Urban land complex	Well drained	230.2	42.0%
Urban land, 0% to 2% slopes	-	7.0	1.3%
Water	-	2.9	0.5%
Total		547.9	100.0%

HISTORIC CONTEXT

Archaeologists have broken southeast Florida's precontact history into a four-part chronology based on distinct cultural and technological characteristics. From oldest to most recent, the five temporal periods include Paleoindian, Archaic, Woodland, Mississippian, and Protohistoric.

Broward County is within the Glades Region, as defined by Milanich (1994). Given the limited potential for the identification of intact archaeological deposits within the Study Area, a full discussion of the Broward County's Native American culture history is beyond the scope of this report. Instead, **Table 2** provides a summary of the precontact and historic chronology of southeast Florida and additional references.

Figure 2. Soil drainage classifications in the Study Area.

Table 2. Archaeological Periods of Southeast Florida.

Calendrical Dates	Archaeological Stage	Periods or Cultures	Citations
AD 1500–1750	Protohistoric	East Okeechobee IV	Carr et al. 1995; Kennedy et al. 1991
AD 1000–1500	Mississippian	East Okeechobee III	Carr et al. 1995; Kennedy et al. 1991; Wheeler 1992
AD 800–1000	Woodland	East Okeechobee II	Carr et al. 1995; Kennedy et al. 1991
500 BC–AD 800		East Okeechobee I	Carr et al. 1995; Kennedy et al. 1991
2000–500 BC	Late Archaic	Glades	Carr et al. 1995; Schwadron et al. 2006
5000–2000 BC	Middle Archaic	Florida Archaic Stemmed Complex	Milanich 1994; Carr 2006; Schwadron et al. 2006
8000–5000 BC	Early Archaic	Kirk/Bolen	Milanich 1994; Carr 1986
11,000–8000 BC	Paleoindian	Clovis	Anderson 1990; Dunbar 2006

A brief historic context for Broward County is provided below. Additional detail regarding historic development within the project area is provided in the Historic Map and Aerial Review section.

Early European Exploration and Settlement

The Tequesta people lived in modern Broward County by the sixteenth century. The Tequesta hunted deer, fish, alligator, and turtles and gathered shellfish, plants, and roots. They used canoes to travel along coastal waterways (Historical Society of Palm Beach County 2009). Modern Florida served as an important entry point for early European exploration of North America. Italy's Captain John Cabot may have sailed south along Florida's coast as early as 1498 (Eriksen 1994; Dovell 1952:19). Spanish traders reportedly raided Florida's indigenous coastal villages and enslaved the populations. Juan Ponce de Léon left Puerto Rico on March 3, 1513, and arrived in modern Florida on April 2, 1513 (Milanich 1995:107–108; Gannon 1996:17–20; Eriksen 1994). Despite the presence of indigenous communities, Ponce de Léon claimed to discover the land for Spain and called the land *La Florida* (Gannon 1996:17–20; Milanich 1995:107–109). Following France's exploration of Florida, Spain's King Philip II sent Admiral Pedro Menéndez de Avilés to reclaim the land for Spain. Menéndez established a camp near present-day St. Augustine and built garrisons along the coast (Gannon 1993:7; Tebeau 1980).

The arrival of non-indigenous persons introduced diseases for which Native American peoples had not acquired immunity. By the early eighteenth century, many Tequesta died from European diseases leaving behind abandoned villages (Historical Society of Palm Beach County 2009). Following these epidemics, Creek peoples from Georgia and the Carolinas migrated south. Initially, the Spanish referred to these migrating populations as *cimarrones*, meaning "wild" or "runaway." Over time, the term *cimarrones* became *Seminole* (Covington 1993:13). Seminole people often helped enslaved people escape southern states and territories, provided refuge, assisted in creating Black settlements, and often prevented their recapture (Fairbanks 1973). This assistance instigated the First Seminole War (1817–1818) and drew US military forces into the Spanish territory. The US pressured Spain to transfer the Florida territory to US ownership and completed the transfer with the Adams-Onís Treaty in 1821 (Tebeau 1980).

In 1793, Charles Lewis and his family became modern Broward County's first known permanent European colonists through a Spanish land grant along New River (McGoun 1972). European colonization increased following the Adams-Onís Onís Treaty. In 1825, William Cooley and his family became the Lewis' neighbor on the north bank of the New River at Tarpon Bend (League of Women Voters 1960:43; McGoun 1972). Between 1835 and 1858, the US government forcibly removed approximately 4,400 Seminole people from Florida to modern Oklahoma through the 1830 Indian Removal Act (National Museum of the American Indian 2023). Little additional European colonization occurred during the Second Seminole War (1835–1842) or the Third Seminole War (1855–1858). The US military increased its presence in the region during this period and built forts at various locations across southern Florida.

Broward County, Nineteenth Century

European-American colonization in modern Broward County remained minimal in the 1850s and 1860s. Late nineteenth-century transportation advances encouraged further settlement on former Native American lands in south Florida. By 1890, the Intracoastal Waterway to Biscayne Bay provided sheltered passage for ships traveling along Florida's east coast (McCarthy 1990). In 1892, Dade County built a road connecting the region's two main towns, Lake Worth and Miami (Kersey 1975). In 1893, Guy Metcalf hired Frank Stranahan to operate a New River camp station and ferry service. Brothers Frank and Will Stranahan later founded Fort Lauderdale (Kersey 1975; Patterson 1979).

Orange cultivation began in northern Florida in the Spanish period and was common statewide by the 1870s (Dovell 1952). By the late nineteenth century, citrus was one of Florida's principal industries. During the winter of 1894 and 1895, the citrus industry suffered from an uncommon wave of freezing temperatures. The freezes wiped out much of north Florida's citrus industry but spared south Florida growers (Chapin 1914; Dovell 1952). Shortly thereafter, Henry Flagler extended the Florida East Coast Railroad to Miami via Fort Lauderdale. The first train arrived in modern Broward County on February 22, 1896 (McGoun 1972). The train provided rapid export of the area's fruit and vegetables to northern markets while bringing in northern tourists and prospective settlers (Hope 1989).

Broward County, 1900–Present

By 1900, only 100 people lived in modern Broward County's few settlements, with 52 residents in Fort Lauderdale (McGoun 1972). The state legislature created Broward County from portions of Dade and Palm Beach counties on April 30, 1915, and named Fort Lauderdale as its county seat (Dunn 1998; Writers Program 1930s). Governor Napoleon Broward, who championed draining the Everglades, is the county's namesake (Morris 1995). Broward County benefited from the early twentieth-century Florida land boom. Between 1920 and 1930, Broward gained 14,934 residents as Florida's fastest growing county. Coupled with this population surge, six Broward County municipalities incorporated, including Deerfield Beach (1925), Davie (1925), Hollywood (1925), Hallandale (1927), Lauderdale-by-the-Sea (1927), and Oakland Park (1929) (Vogel 1992:29). In 1927, construction of the Federal Aid Highway (Federal Highway / US 1) began in Broward County, further opening it to visitors and settlers (Cobb and Gillis 2015). Like much of Florida's

east coast, agriculture and tourism comprised Broward County's major early twentieth-century industries (George 1991:3; Writers Program 1930s:4).

During World War II, the Navy and Army Air Corps established airfields in Broward and neighboring counties. The Navy converted present-day Fort Lauderdale-Hollywood International Airport, originally a small private airport, into a major training facility named Fort Lauderdale Naval Air Station (McGoun 1972:15 New River News 1982:14). The military operated smaller bases at Pompano Airfield (Pompano Beach Airpark) and W. Prospect Airfield (Fort Lauderdale Executive Airport). New recruits were hosted by area hotels, including the Lauderdale Beach Hotel and the Tradewinds Hotel, both of which served as Naval Training Schools. Residents joined civilian defense committees, boards, and groups. The US Army and the Fighter Command established lookout posts staffed by civilian volunteers searching for enemy subs, ships, and planes (Garner 1996:42–44). Every beachside home and structure maintained a blackout at night, and Coast Guardsmen patrolled the waterfront.

Between 1960 and 1970, Broward County's population increased by 86% from approximately 46,558 residents to 286,000 residents (Vogel 1992:27). As neighboring Dade County grew, people moved to Broward County to find affordable housing. Tourism emerged as Broward County's biggest industry. These two trends spawned a substantial service industry, though agriculture remained an important industry, bringing in an estimated \$33.5 million in 1966 (Greater Fort Lauderdale Chamber of Commerce 1968:3). By 1980, Broward County's population numbered over 1,000,000 people (Forstall 1996). In the 1980s, the number of operating farms decreased due to the development of large, contiguous tracts for large-scale housing developments (USDA National Agricultural Statistics Service 1987, 1997; Vogel 1992:27). Currently, Broward County's largest industries are retail services, healthcare and social assistance, and accommodation and food services (Broward County Government 2021).

FLORIDA MASTER SITE FILE (FMSF) DATA

SEARCH conducted an FMSF data search to identify previously recorded cultural resources and previously conducted surveys within 1.6 kilometers (km) (1.0 mile [mi]) of the Study Area. These are summarized below.

Previous Surveys

A FMSF data search indicated that 24 previous cultural resource surveys have been completed within 1.6 km (1.0 mi) of the Study Area (**Figure 3**). Of these, only seven were completed within the Study Area; these are discussed below (**Table 3**).

Figure 3. Previous cultural resource surveys within 1.6 km (1.0 mi) of the Study Area.

Table 2. Previously Conducted Surveys within or Intersecting the Study Area.

FMSF Survey No.	Survey Report Title	Reference

26259	<i>Broward County Municipal Services District Historic Resources Survey: Broadview Park, Central County, and the City of West Park</i>	DeFelice 2019

FMSF Survey No. 3633 is a county-wide archaeological survey that was completed by the Archaeological and Historical Conservancy (Carr et al. 1993). Field methods included judgmental shovel testing, but the locations of individual shovel tests are unknown. A total of 17 archaeological sites were identified during the survey, none of which are within the current Study Area. The survey also resulted in the identification of three archaeological sensitivity zones, all of which are east of the Intracoastal Waterway and outside the current Study Area.

FMSF Survey No. 4075 is an archaeological survey of southeastern Broward County that was completed by the Archaeological and Historical Conservancy (Carr et al. 1995). Field methods included the excavation of judgmental shovel tests, but the locations of individual tests are unknown. A total of 42 archaeological sites were identified during the survey, none of which are within the current Survey Area. The survey also resulted in the identification of six archaeological sensitivity zones, none of which include the Study Area.

FMSF Survey No. 9518 is a CRAS of the Florida's Turnpike corridor (Janus Research 2003). Field methods included the excavation of 15 shovel tests, none of which were within the current Study Area. No cultural resources were identified during the survey.

FMSF Survey No. 12945 is a CRAS of the I-595 corridor (Janus Research 2005). Field methods included shovel testing at 10 m (33 ft) and 25 m (82 ft) intervals in areas of "high site potential," none of which appear to have been within the current Study Area. A total of two archaeological sites and five architectural resources were identified during the survey, including one linear resource that is mapped within the current Study Area (8BD03279).

FMSF Survey No. 18971 is a reconnaissance survey of I-595 (Janus Research 2012). Field methods were limited to pedestrian inspection due to the presence of existing pavement and buried utilities. No cultural resources were documented as part of the survey.

FMSF Survey No. 21126 is a CRAS re-evaluation of a previous PD&E study along SR 862 (Janus Research 2013). Field methods were limited to pedestrian inspection. A total of 72 historic resources were identified during the survey, including one linear resource (8BD03279) and eight historic buildings (8BD05030-8BD05037) within the current Study Area.

FMSF Survey No. 26259 is an architectural survey of Broward County Municipal Services District tracts that was completed by Coastal Archaeology & History Research (DeFelice 2019). A total of 134 historic resources were identified during the survey, including 27 historic buildings within the current Study Area (8BD06891-8BD06919).

Archaeology Results

A FMSF data search indicated that no previously recorded archaeological sites are within the Study Area; however, one archaeological site (8BD03208) is within 2.6 km (1.0 mi) of the Study Area (**Figure 4**).

Site 8BD03208 is approximately 287 m (942 ft) southeast of the Study Area. This site is a Native American habitation area that has yielded Glades pottery, midden deposits, and human remains. The remains were identified in solution holes in the limestone bedrock beneath a ridge that was identified as a remnant tree island. Though the result of previous testing suggests the site does not extend into the current project area, the presence of this site raises the possibility that similar sites are present where former tree islands have since been developed and the surrounding waterways have been diverted. Within the Project Area, the mostly likely location for a similar deposit would be in its eastern part, where an 1870 General Land Office (GLO) map shows the edge of a tree hammock extending into the area near Southwest 19th Street (Fern Road) (**Figure 5**, GLO 1870). This part of the Study Area also includes moderately well-drained soils on the slope of a large, elevated landform. This area currently includes paved roadways and residential and commercial development.

Architectural History Results

On December 7, 2023, SEARCH reviewed FMSF data to identify previously recorded architectural history resources within the Study Area. SEARCH identified 41 previously recorded resources within or adjacent to the Study Area, including two previously recorded resource groups (8BD06905/Collier Groves Early Residential District and 8BD06910/Rock Hill Section D District) and 38 previously recorded buildings within the Study Area. One previously recorded linear resource (8DB03279/North New River Canal) is outside of, but immediately adjacent to, the Study Area's southern boundary (see **Figure 4**). Of these 41 resources, one resource was recommended "Eligible" for NRHP inclusion (8BD03279/North New River Canal); 21 resources were recommended "Ineligible" for NRHP inclusion; and 19 resource were recommended to have "Insufficient Information" for an NRHP eligibility determination (**Table 4**).

Figure 4. Cultural resources within 1.6 km (1.0 mi) of the Study Area.

Figure 5. 1870 GLO map, showing location of 8BD03208 (circle) relative to mapped hammock (arrow) extending into Study Area (blue).

Table 3. Previously Recorded Architectural History Resources Within the Study Area.

FMSF No.	Address/Name	Year Built	NRHP Status (Date)
Linear Resource			
8BD03279	North New River Canal	ca. 1906–1912	Eligible (8/1/2001)

HISTORIC MAP AND AERIAL PHOTOGRAPH REVIEW

SEARCH reviewed historic maps and aerial photographs to identify historic land use patterns and previously unrecorded pre-1979 buildings and structures within the Study Area.

Historic Land Use

In the 1870 GLO map, the region immediately east of the Study Area is depicted as pine woods, tree hammocks, and freshwater marshes. The area south of the modern I-595 is depicted as “borders of the Everglades” with “rapid currents” and “deep rocks and caverns” (GLO 1870). By 1900, the Study Area had been mapped as “Indian Lands” with no additional detail (GLO 1900).

The earliest available USGS topographic quadrangle map of the area, 1949 *Fort Lauderdale South, FL*, depicts the Study Area as mostly undeveloped woodland (**Figure 6**) and the surrounding area as sparsely developed. Several large tracts north and northeast of the Study Area appear subdivided for future development. The dwellings in Resource Group 8BD06905 (Cedar Groves Early Residential District) are depicted near the Study Area’s northeast boundary. The map also depicts sparse development north of the resource group and unpaved roads throughout the

Study Area. South SR 7 links Resource Group 8BD06905 to other minor highways north and south of the Study Area. The ca. 1906–1912 North New River Canal (8BD03279) is depicted south of the Study Area between secondary highways. Five fenced borrow pits are depicted within the Study Area's northeast corner (USGS 1949).

By 1956, the Study Area remained mostly undeveloped and is depicted as woodland on the topographic map (USGS 1956). The Fort Lauderdale area is depicted as densely developed with few individual resources indicated. The map depicts orchards south of the North New River Canal, and undrained swamp northwest of the Study Area (USGS 1956).

By 1962, the Study Area was depicted as subdivided and densely developed (**Figure 7**). Manmade ponds were present in the Study Area's southwest and northeast corners. The Lazy Lake Mobile Home Park, Meadowbrook School, Pine Ridge School, and Sunview Park are all depicted on the 1962 topographic map. Tracts of land within the central Study Area and along the North New River Canal remain undeveloped. The surrounding area is depicted as densely developed with residential subdivisions (USGS 1962).

By 1994, development within the Study Area remained consistent. Broadview Park, Sunview Park, and parcels around the Meadowbrook and Pine Ridge schools remain undeveloped on the topographic map (USGS 1994). The surrounding area remains densely developed with subdivisions, manmade lakes, and golf courses (USGS 1994).

Previously Unrecorded Pre-1979 Architectural History Resources

SEARCH architectural historians reviewed historic maps, aerial photographs, and Broward County Property Appraiser (BCPA) data to identify previously unrecorded pre-1979 buildings and structures. SEARCH identified approximately 1,750 previously unrecorded pre-1979 buildings or structures within the Study Area (USGS 1949, 1962, 1994; BCPA 2023; NETR 1952, 1961, 1980). Other previously unrecorded resources within the Study Area include the ca. 1960 Sunview Park and a ca. 1960 mobile home park.

Figure 6. 1949 topographic map.

ARCHAEOLOGICAL SITE POTENTIAL

No subsurface testing for archaeological deposits is known to have been completed within the Study Area. Though heavily developed, the presence of site 8BD03208 to the southeast suggests other sites may be present in the Study Area where conditions were similar prior to construction of the North New River Canal and subsequent development. These conditions were identified in the eastern part of the Study Area, where historic maps show a tree island may have supported Native American communities. Though the potential for identifying intact archaeological deposits in this area is low due to existing development, it should be considered a possible area of archaeological sensitivity that has potential to yield diagnostic artifacts or human remains. Review of historic maps and existing conditions throughout the remainder of the Study Area suggests the potential for encountering significant and intact archaeological deposits is low, with the lowest potential in poorly drained soils at the base of the elevated landform in the northeastern part of the Study Area.

CONCLUSIONS AND RECOMMENDATIONS

This technical memorandum summarizes the results of a cultural resources review in support of the Broadview Park project in Broward County, Florida. Based on existing environmental and cultural resources data, the potential for intact archaeological sites to be present within the Study Area is generally low. However, the presence of a site to the southeast suggests the eastern part of the Study Area has potential to yield diagnostic artifacts or human remains. Because shovel testing will likely not be possible prior to construction due to existing development and the presence of buried electric and telecommunications utilities throughout the highly developed Study Area, SEARCH recommends archaeological monitoring during ground disturbing Project activities in any previously undisturbed areas adjacent to the mapped hammock in **Figure 5**. No additional archaeological work is recommended.

SEARCH identified 41 previously recorded historic resources and approximately 1,750 previously unrecorded pre-1979 buildings or structures within the Study Area. Because the proposed Project will not impact existing buildings or structures as planned, SEARCH recommends no additional architectural history work.

RE: DHR Project File No.: 2024-2000, Received by DHR: February 15, 2024
Application No.: N/A
Project: Broadview Park Green Infrastructure Stormwater Drainage System Project
County: Broward

To Whom It May Concern:

Our office reviewed the referenced project in accordance with Chapters 267.061 and 373.414, *Florida Statutes*, and implementing state regulations, for possible effects on historic properties listed, or eligible for listing, in the *National Register of Historic Places*, or otherwise of historical, architectural or archaeological value.

We note that the proposed project is taking place within the boundaries of 8BD06905 (Collier Groves Early Residential District) and 8BD06910 (Rock Hill Section D District), previous studies of which have yielded insufficient information to determine the districts' eligibilities for listing on the National Register. However, based on the nature of the project activities, we do not expect the undertaking to have an adverse effect on the districts' potential eligibilities.

It is the opinion of this office that the proposed project is unlikely to affect historic properties. However, unexpected finds may occur during ground disturbing activities, and we request that the permit, if issued, should include the following special condition regarding inadvertent discoveries:

- If prehistoric or historic artifacts, such as pottery or ceramics, projectile points, dugout canoes, metal implements, historic building materials, or any other physical remains that could be associated with Native American, early European, or American settlement are encountered at any time within the project site area, the permitted project shall cease all activities involving subsurface disturbance in the vicinity of the discovery. The applicant shall contact the Florida Department of State, Division of Historical Resources, Compliance and Review Section at (850)-245-6333. Project activities shall not resume without verbal and/or written authorization. In the event that unmarked human remains are encountered during permitted activities, all work shall stop immediately and the proper authorities notified in accordance with Section 872.05, Florida Statutes.

If you have any questions, please contact Alexandra Gulde, Historic Sites Specialist, by email at Alexandra.Gulde@dos.myflorida.com, or by telephone at (850) 245-6363.

Sincerely,

Alissa Lotane, SHPO

Subject: RE: Initial Correspondence Package for Broadview Park Green Infrastructure Stormwater Drainage System Project - Email #1

Good morning Micheline,

After examining the location of Site 8BD3203 in relation to the proposed Broadview Park drainage improvements, we have concluded that these improvements won't have an impact on Site 8BD3202 because they are neither directly next to nor inside the construction boundaries. Site 8BD3202 is situated 984 feet from the Broadview Park project limits, with the North New River Canal and I-595 Express Roadway dividing them.

Feel free to contact me if you have further questions.

Sincerely,

Diana P. Rodriguez, P.E.

[Report Suspicious](#)

Good afternoon Millie,

Site 8BD3202 is 300 meters southeast of the project area. It is beyond 441 and the North New River Canal, but those were constructed historically.

Are you familiar with the Florida Master Site File through the Division of historic resources? If you provide a shapefile of the project area, they should be able to tell you which sites are nearby and I believe that they also include a map.

Here's a link to their contact information. [Florida Master Site File - Division of Historical Resources - Florida Department of State](#)

Good morning, Micheline,

Thank you for your email.

I was trying to locate 8BD03208 but couldn't find it.

Can you send me the location of the site?

Thank you.

Millie

THPO Compliance Tracking Number: 0034298

Dear Ms. Rodriguez,

Thank you for contacting the Seminole Tribe of Florida – Tribal Historic Preservation Office (STOF-THPO) Compliance Section regarding the *HUD - Broadview Park Green Infrastructure Stormwater Drainage System Project, Broward County, Florida*.

The proposed undertaking does fall within the STOF Area of Interest. We have reviewed the documents that you provided and completed our assessment pursuant to Section 106 of the National Historic Preservation Act and its implementing authority, 36 CFR Part 800. In response, our office would like to provide the following comments:

- Based on the information available to us at this time, we are concerned that the proposed undertaking will adversely impact cultural resources important to the Tribe. Due to the proximity of site 8BD3208 to the project and since there has not been a cultural resource assessment survey of the project area, we recommend that ground disturbing activity be monitored by a professional archaeologist that meets the Secretary of the Interior's Professional Qualifications Standards (36 CFR 61). Additionally, we respectfully request the delivery of an archaeological monitoring report for our review upon project completion.

Otherwise, we have no objections or other comments currently. Please notify our office if any archaeological, historical, and/or burial resources are inadvertently discovered during project implementation and feel free to contact us with any questions or concerns.

Respectfully,

Micheline Hilpert, MA

Subject: Initial Correspondence Package for Broadview Park Green Infrastructure Stormwater Drainage System Project - Email #1

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Good morning,

An Initial Correspondence Package for consistency review was sent on February 13, 2024.

The email size was too big so I am resending the files in three emails.

This is the first email which consists of the letter to you.

Email #2 consists of Attachment 1.

The third email consists of Attachment 2.

Thank you,

Millie

SURVEYOR'S EVALUATION OF SITE

Potentially elig. for local designation?	yes	no	insuff.info	Local Designation Category
Individually elig. for Nat. Register?	yes	no	insuff.info	
Potential contributor to NR district?	yes	no	insuff.info	

EXPLANATION OF EVALUATION (Required if evaluated; limit to 3 lines; attach full justification)

AREAS OF SITE CONTAIN EXTREMELY DENSE MIDDEN DEPOSIT, SOME OF WHICH HAS BEEN DISTURBED BY PROPERTY'S USE AS A TRAILER PARK OVER LAST 40 YEARS. HOWEVER, UNAFFECTED DEPOSITS MAY YIELD A GREAT DEAL OF DATA ON RESOURCE EXPLOITATION/HABITATION DURING PREHISTORIC PERIOD ON THIS FORMER TREE ISLAND. RECOMMENDATIONS FOR SITE AVOIDANCE OF ARCHAEOLOGICAL ZONE, IF POSSIBLE; IF NOT POSSIBLE, MITIGATION OF AFFECTED AREAS SHOULD BE CONDUCTED.

Site Summary

Site Name:	Hacienda
State Site Number:	BD3208
Location:	T 50S, R 42E, Section 19
Environmental Setting:	Remnant hammock island and drained freshwater wetland
Site Type:	Black dirt midden; prehistoric cemetery; late 19 th -early 20 th century agricultural grove
Site Function:	Habitation; resource extractive site, mortuary
Description:	<p>A black dirt midden is located on a remnant hammock island that was surrounded by wetlands adjacent to the South Fork of the New River. Since development and drainage activities, the project parcel and hammock have been subject to a myriad of development activities including clearing, fill, drainage, and construction. The hammock is presently characterized as an elevated rise of limestone that extends roughly 700 feet northeast to southwest across the center of the parcel.</p> <p>Testing indicated that there are two concentrated areas of midden, one located near the northeast end of the hammock ridge and the other at the west end. It is possible that the entire hammock was once a site of prehistoric activity. Midden deposits varied from the exposed surface to a depth of 40 cm.</p>
Chronology:	Prehistoric: (Late Archaic, Glades II-III) Historic: 19 th century, early 20 th century to present
Collections:	Prehistoric: pottery (sand tempered plain, Key Largo Incised, St. Johns Check Stamped, St. Johns Plain, Belle Glade Plain), marine shell, faunal bone, <i>Strombus</i> celt Historic: glass, pottery (whiteware), metal button, glass bead
Previous Research:	Eck, Christopher R. 1998 An Archaeological Survey of the Hacienda Parcel, Broward County, Florida. <i>AHC Technical Report #117</i> . Archaeological and Historical Conservancy, Miami.
Preservation Quality:	3 (Fair to very good subsurface preservation of surviving midden areas)
Ownership:	Private

Recommendations: Preservation of human burial ground and monitoring during construction activities

Significance: This site is locally significant and, because of the presence of intact mortuary remains, may qualify for listing on the National Register of Historic Places.

Dear Mr. Miller,

This report is provided in partial fulfillment of State Statute 872.05, the Unmarked Human Graves Act. The report documents the occurrence of unmarked human burials on the Hacienda Parcel in Broward County. The work resulted in the providing of a preservation area for these graves, as well as area for the re-interment of other unmarked human graves that might be encountered during other construction activities.

Sincerely,

Vivian Zenteno
Administrative Assistant

Re: Notice of Discovery of
Human Remains
Hacienda River Front
Broward County

Dear Mr. Miller,

This letter is to advise you of the discovery of human skeletal remains in accordance to the intent of State Statute, 872.05, the Unmarked Human Graves Act. A human cranium was encountered during phase II archaeological testing at the Hacienda parcel in Davie, Broward County. Since this discovery was the result of an archaeological investigation and not accidental discovery, the County Medical Examiner was not notified.

The skeletal remains are prehistoric as indicated by the deep staining of the bone, tooth wear, the fragmentary nature of the bone, as well as the general context of the discovery, which is a prehistoric black dirt midden (site 8BD3208). Once recognized as human, excavations were terminated. Other test holes on the site have not yielded human remains.

Our choices are to remove the human material, or if possible, leave the grave(s) in place and cap them with fill thus preserving them in place forever. To date we do not have sufficient engineering data to know if that is feasible.

Since the development of this parcel is imminent, and the County has provided prior approval to this site plan, we are attempting to determine whether this is an isolated grave or part of a cemetery, and what the boundaries of the graves might be.

Jim Miller

Notice!

**This site may contain unmarked
human remains...**

Comments: Black dirt midden containing a prehistoric cemetery (Eck 1999).

Please see the database and file folder for more information...

(This notice warns the researcher to check all Site File records closely. We do not guarantee the presence or absence of human remains at a site, only that the Florida Master Site File's information indicates that unmarked human remains were present. Thus this sheet is not used for sites currently recorded as historical cemeteries.)

SURVEYOR'S EVALUATION OF SITE

Potentially eligible for local register?

yes no

insufficient info

Name of local register if eligible:

Individually eligible National Register?

yes no

insufficient info

Potential contributor to NR district?

yes no

insufficient info

Explanation of Evaluation: (Required if evaluated. Limit to 3 lines; attach full justification)

All available evidence indicates the site has been destroyed by modern land-clearing and development.

Recommendations Owner/SHPO: No further work.

DHR USE ONLY ***** OFFICIAL EVALUATIONS ***** DHR USE ONLY

ARCHAEOLOGICAL SITE FORM

Consult the Guide to Archaeological Site Forms for detailed instructions.

Site #: 8BD3208

Recorder Site #: 2

FIELD METHODS (Check one or more methods for detection and for boundaries)

SITE DETECTION *

- no field check exposed ground screened shovel
 literature search posthole digger
 informant report auger
 remote sensing unscreened shovel

SITE BOUNDARIES *

- bounds unknown remote sensing unscreened shovel
 none by recorder insp exposed ground screened shovel
 literature search posthole tests block excavations
 informant report auger estimate or guess

Other Methods: A pedestrian survey was conducted over the entire site where no building or other barriers prohibited investigation.

SITE DESCRIPTION

Extent Size (m2): 0 Depth and Stratigraphy of cultural deposit:
No cultural material encountered.Temporal Interpretation*- Components (check one): single prob single prob multiple multiple uncertain unknown
Describe each occupation in plan (refer to attached large scale map) and stratigraphically. Discuss temporal and functional interpretations:Integrity/ Overall Disturbance* none seen minor substantial major redeposited destroyed-(document it!) unkwn

Disturbances/Threats/Protective Measures: The area of the site is now a gated apartment complex called Stone Arch Apartments. The entire development is covered with grass and asphalt which has been graded.

Surface: Area Collected (m2):

Collection Units:

Excavation: # noncontiguous blocks:

ARTIFACTS

Total Artifacts #: 0 (C)ount or (E)stimate?:

Surface #: 0 (C) or (E)?:

Subsurface #: 0 (C) or (E)?:

COLLECTION SELECTIVITY *

- unknown unselective (all artifacts)
 selective (some artifacts)
 mixed selectivity

SPATIAL CONTROL *

- uncollected general (not by subarea)
 unknown controlled (by subarea)
 variable spacial control
 other

4:	N=	8:	N=	12:	N=

ENVIRONMENT

Nearest Fresh Water-Type/Name: South Fork

Distance-(m)/bearing: adjacent

Natural Community (FNAI category* or leave blank): Everglades

Local Vegetation: Urban development

Topography: tree island

Min Elevation (m): 00 Max Elevation (m): 1.5

Present Land Use: Apartment complex

Soil Association: Hallandale-Margate association

SCS Soil Series: Hallandale fine sand

FURTHER INFORMATION

Informant(s):

Describe field analysis notes, artifacts, photos. For each, give type* (eg., notes) curating organization*, accession #s, and short description:
Janus Research, 1300 N. Westshore Blvd., Suite 100, Tampa, FL 33607, 813.636.8200, janus@janus-research.comManuscripts or publications on the site: Janus Research, 1300 N. Westshore Blvd., Suite 100, Tampa, FL 33607, 813.636.8200,

BROADVIEW PARK

Stormwater Infrastructure Improvement Project

Broadview Park will be conducting a Public Meeting to offer an opportunity to residents to learn more about this upcoming project and provide feedback to the County's project representatives.

Tuesday, November 7th at 7:00pm

Broadview Park Civic Association
11500 SW 42nd Avenue,
Fort Lauderdale, FL 33317

PROJECT PURPOSE

To plan, design, and construct drainage system improvements to reduce flooding in Broadview Park and improve the quality of stormwater runoff.

Scan the code to access the website and updates.

2500 copies of this public document were promulgated at a gross cost of \$295.00 to inform the public about services provided by Broward County.

BROADVIEW PARK

Proyecto para Mejorar la Infraestructura de Drenaje

Broadview Park llevará a cabo una reunión pública para discutir el proyecto de infraestructura de drenaje y brindará la oportunidad de obtener más información para los residentes.

Martes, Noviembre 7, 7:00pm

Broadview Park Civic Association
1500 SW 42nd Avenue,
Fort Lauderdale, FL 33317

PROPÓSITO DEL PROYECTO

Planificar, diseñar y construir infraestructura de drenaje de mayor calidad en Broadview Park para reducir inundaciones y la descarga de contaminantes en las vías fluviales.

Scanear el código para acceder al sitio web y obtener actualizaciones.

Se promulgaron 2500 copias de este documento público a un costo bruto de \$295.00 para informar al público sobre los servicios brindados por el Condado de Broward.

COMMENT FORM
Public Information Workshop
Broadview Park
Stormwater Infrastructure Improvement Project

Broadview Park Civic Association, Sunview Park
1500 SW 42nd Avenue, Fort Lauderdale, FL 33317
Tuesday, November 7, 2023, at 7:00 p.m.

Please provide your comments below. If more space is needed, please use an additional sheet of paper. You may place your comments in the "comment box" provided at the meeting.

NO COMMENT FORMS WERE RECEIVED AT THE MEETING

NO COMMENTS RECEIVED VIA THE WEBSITE DURING THE 30-DAY PERIOD

**VERBAL COMMENTS/QUESTIONS WERE RECEIVED AT THE MEETING AND ARE
DOCUMENTED WITH THE MEETING MINUTES.**

** This document is subject to public record laws and may be released to the media or public upon request.*

You can also submit comments at the project website by visiting
www.broadviewdrainage.com or scanning the QR code.

Please provide comments by **December 7th, 2023**.

Stormwater Infrastructure Improvement Project

BROADVIEW PARK

AGENDA

- Introductions
- Flooding in Broadview Park
- Long-Term Project
- Previous and Short-Term Projects
- Questions or Comments

Introductions

Broward County Government

County Commissioner, District 5

- Senator Steven A. Geller

County Administration

- Michael Ruiz, Assistant County Administrator

Urban Planning Division

Resilient Environment Department

- Willowstine Lawson, Senior Program/Project Coordinator

Public Works Department

Highway & Bridge Maintenance Division

- Anh Ton, P.E., Director
- Diana Rodriguez, P.E., Expansion Project Administrator
- Michael Melendez, P.E., Consultant Project Manager

Why are we here?

Long Term Project

County applied for a grant
more than 2 years ago.

\$16 Million + **\$5 Million**

Grant Award

Total Budget \$21 Million

Drainage Improvements Only in Broadview Park

Planning

Design

Construction

Schedule

Flooding Factors

Storm
Frequency &
Intensity

Rising
Water Table

Sea Level Rise

High Tide Flooding

Source: NOAA's [Ocean Today. Transcript](#)

Types of Stormwater Infrastructure

- Bioretention Areas
- Wetlands
- Vegetated Swales
- Berms
- Permeable Pavement
- Deep Wells
- Subsurface Systems
- Stormwater Pump Stations

What is Green Infrastructure?

Green infrastructure is the use of plant, soil, and permeable materials to collect, store, treat, and infiltrate stormwater.

Other Projects

- Past Projects
- Short-Term Improvements Coming Soon

Past Projects

Increased Monitoring
(Rain Event Inspections)

Additional Drainage Infrastructure

Pumping Operations
(Pre and Post Storm)

Short Term Projects (Within 6 Months)

- SW 16th Street
- SW 20th Street
- SW 22nd Street

Thank you!

MEETING MINUTES

Public Meeting No. 1

DATE AND TIME: **Tuesday, November 7, 2023, 7:00 PM**

LOCATION: **Teams**

SUBJECT: **Broadview Park Green Infrastructure Improvement Study**

HBMD PROJECT NO.: **2021-1-164**

CONSULTANT: **CTS Engineering, Inc.**

CONTRACT: **PNC2119245P1**

WORK AUTHORIZATION: **CTS-008**

PURCHASE ORDER NO.: **HWB2300190**

- **SIGN IN:** See Enclosure

- **AGENDA:**

1. Introductions of County Representatives
2. Slideshow Presentation
 - i. An Overview of Flooding Conditions
 - ii. Previously Completed Drainage Projects
 - iii. Future Drainage Infrastructure Projects; Short- and Long-term
 - iv. Description of Types of Drainage Infrastructure
 - v. Current Schedule
3. Opportunities To Comment
 - i. Comment Form (website, 30-day period following the public meeting)
 - ii. Comment Form (written)
 - iii. Aerial Image Board (for marking locations known to flood)
 - iv. Question & Comment Period (verbal)

MEETING ADJOURNED 8:15 PM

Questions & Comments (all are paraphrased from the audio recording)

Attendee: Uri Ostrovsky, 4351 SW 25 St

- Q1: How do you handle stormwater if the ground is saturated?
- C1: Suggested pumping to constructed lakes.
- C2: Suggested a wall with concrete bags like what is along SR-84 to prevent flooding.
- Q2: Will the County come back with an update?
- Q3: What is the scope of the short-term drainage project?

Attendee: Rose, 4948 SW 20 ST

- Q4: How will access to homes be addressed when short term drainage projects begin?
- Q5: Will the use of temporary pumps continue?

Attendee: Unknown

- Q6: Will the short term drainage project impact the installation of FPL lines?

Attendee: Unknown

- Q7: Is stormwater being discharged to Butterfly lake?

Attendee: Unknown

- Q8: Is the approach in Broadview Park similar to what is being done in the Everglades by the Army Corp of Engineers with berms?

Attendee: Unknown

- Q9: Will the projects create sink holes?
