BROWARD COUNTY LAND USE PLAN

Natural Resource Map Series- Eastern Broward County Existing and Planned Waterwells and Zones of Influence

Legend

----- Municipal Boundaries

The delineated boundaries shown on the map for each wellfield reflect the boundaries of Zone Three (3) as defined in the Broward County Wellfield Protection Ordinance

Objective 09.02.00 and its policies address the protection of existing and planned Wellfield and Zones of Influence.

SOURCE: Broward County Division of Water Resources Management 10/29/87

NOT TO SCALE

This is a generalized map. This map should not be used to determine parcel boundaries or limits of depicted items. Please contact the Broward County Planning Council office regarding questions pertaining to parcel boundaries or limits.

Cypress Dominated Freshwater Swamp Dominant canopy of Pond or Bald Cypress with a mixture of Fig, Maple, Cabbage Palm and Pine.	Wetland Cabbage Palm Dominant canopy of Cabbage Palm with entrained wetlands
Freshwater Marsh/Wet Prairie Dominant species of Sawgrass, Arrowhead Cattail, and a variety of herbaceous vegetation in saturated soils.	Wetland Exotic Brazilian Pepper Predominant canopy species of Brazilian Pepper.
Freshwater Swamp/Entrained Surface Water Associated with surface water overflow and contains entrained wetlands with Maple, Bay, Willows and sparse Cypress.	Wetland Exotic Melaleuca Predominant canopy species of Melaleuca.
Mitigation/Completed/Monitoring/Maintenance	Wetland Improved Pasture Disturbed and/or reseeded and regularly maintained, contains entrained wetlands.
Mixed Hardwoods A large diversity of hardwood species tolerant of hydric soil conditions	Wetland Shrub & Brushland Typical dominant species such as Wax Myrtle and Willow, contains entrained wetlands.
Pine with Entrained Wetlands Dominant canopy of Slash Pine and Oak with entrained wetlands.	Wetland Under Development / Mitigation
Saltwater Marsh Dominant species of Cordgrass, Arrowhead, Cattail, and a variety of herbaceous salt tolerant vegetation.	Wetland Unimproved Pasture Disturbed and irregularly maintained with stands of trees and shrubs contains species of Brazilian Pepper.
Saltwater Swamp A mixture of Red, White, and Black Mangrove	Wetland/Non-Wetland Mixed Community
	Lakes, Canals and Major Water Bodies

1. Areas shown have demonstrated wetland conditions during the analysis. Included areas are non-licensed (EPGMD) areas, designated ESL/NRA/LAPC, County Parks, EPGMD wetland mitigation sites and conservation/preservation areas east of the Water Conservation Areas.

2. All determinations were made using the Florida Land Use, Cover and Forms Classification System (FLUCCS) and each listed category is a combination of similar type classifications.

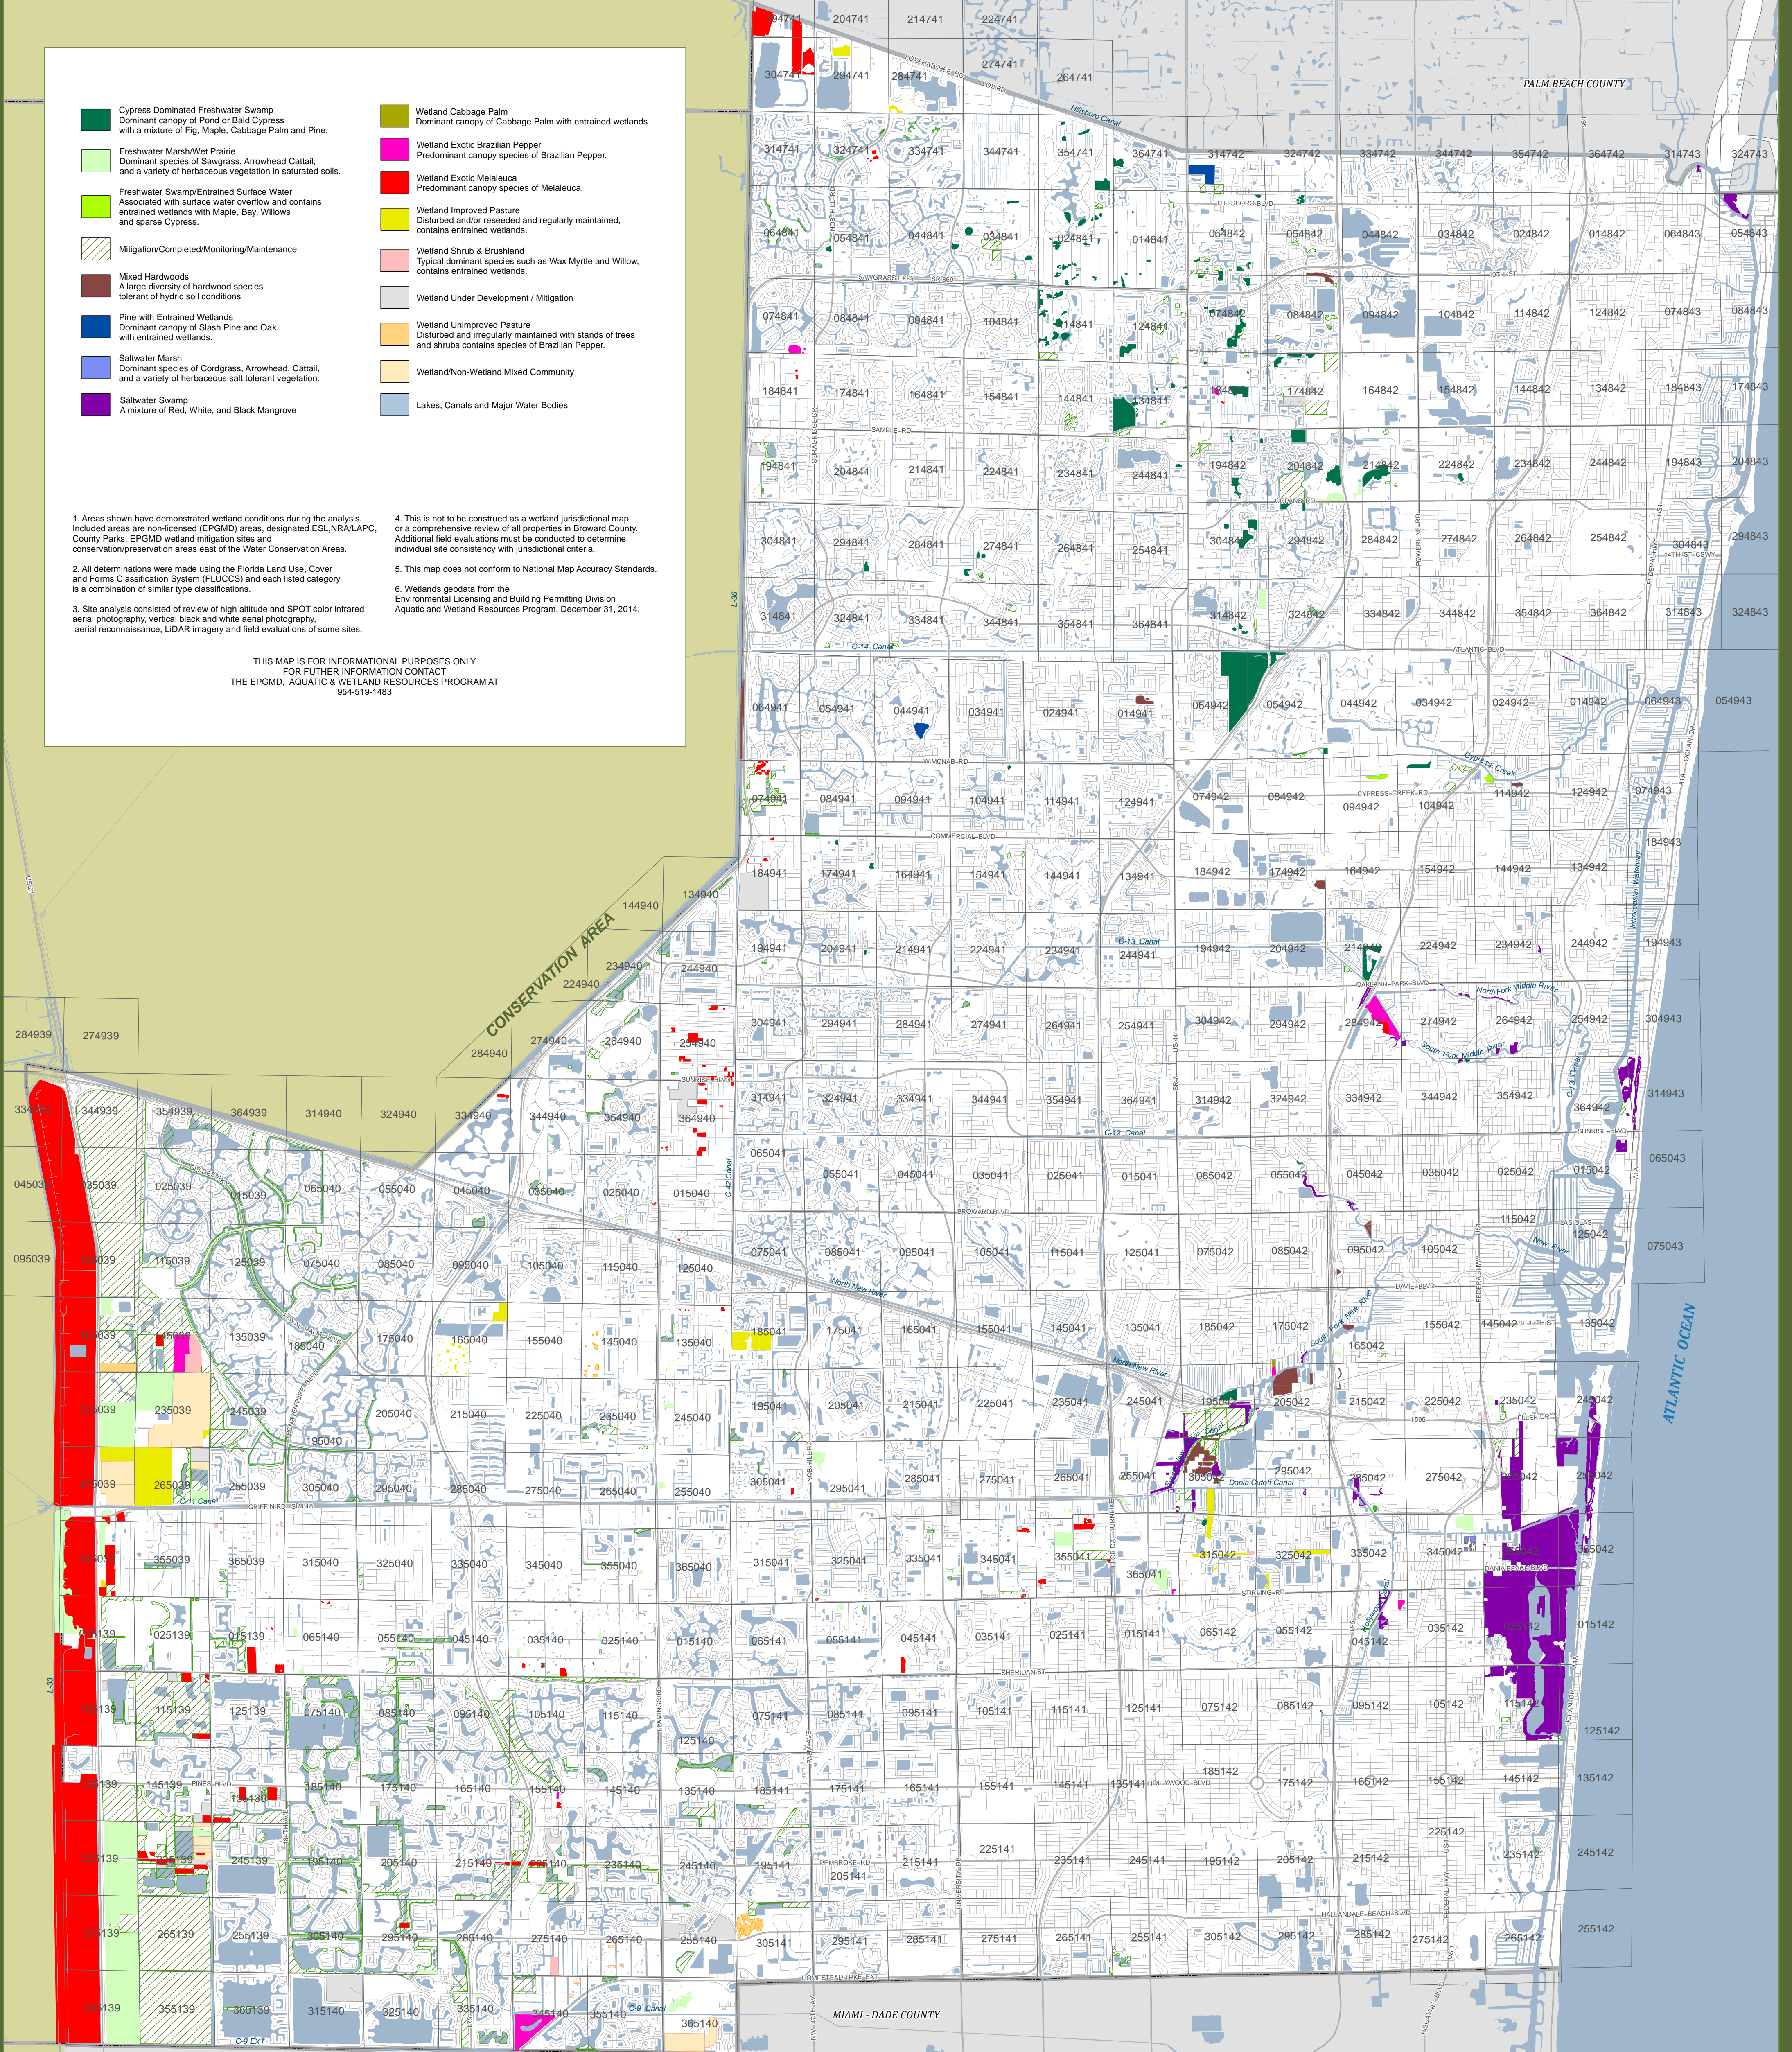

3. Site analysis consisted of review of high altitude and SPOT color infrared aerial photography, vertical black and white aerial photography, aerial reconnaissance, LIDAR imagery and field evaluations of some sites.

4. This is not to be construed as a wetland jurisdictional map or a comprehensive review of all properties in Broward County. Additional field evaluations must be conducted to determine individual site consistency with jurisdictional criteria.

5. This map does not conform to National Map Accuracy Standards.

6. Wetlands geodata from the Environmental Licensing and Building Permitting Division Aquatic and Wetland Resources Program, December 31, 2014.

Legend

-  Sand Bypass Adaptation Action Area
-  Priority Planning Areas

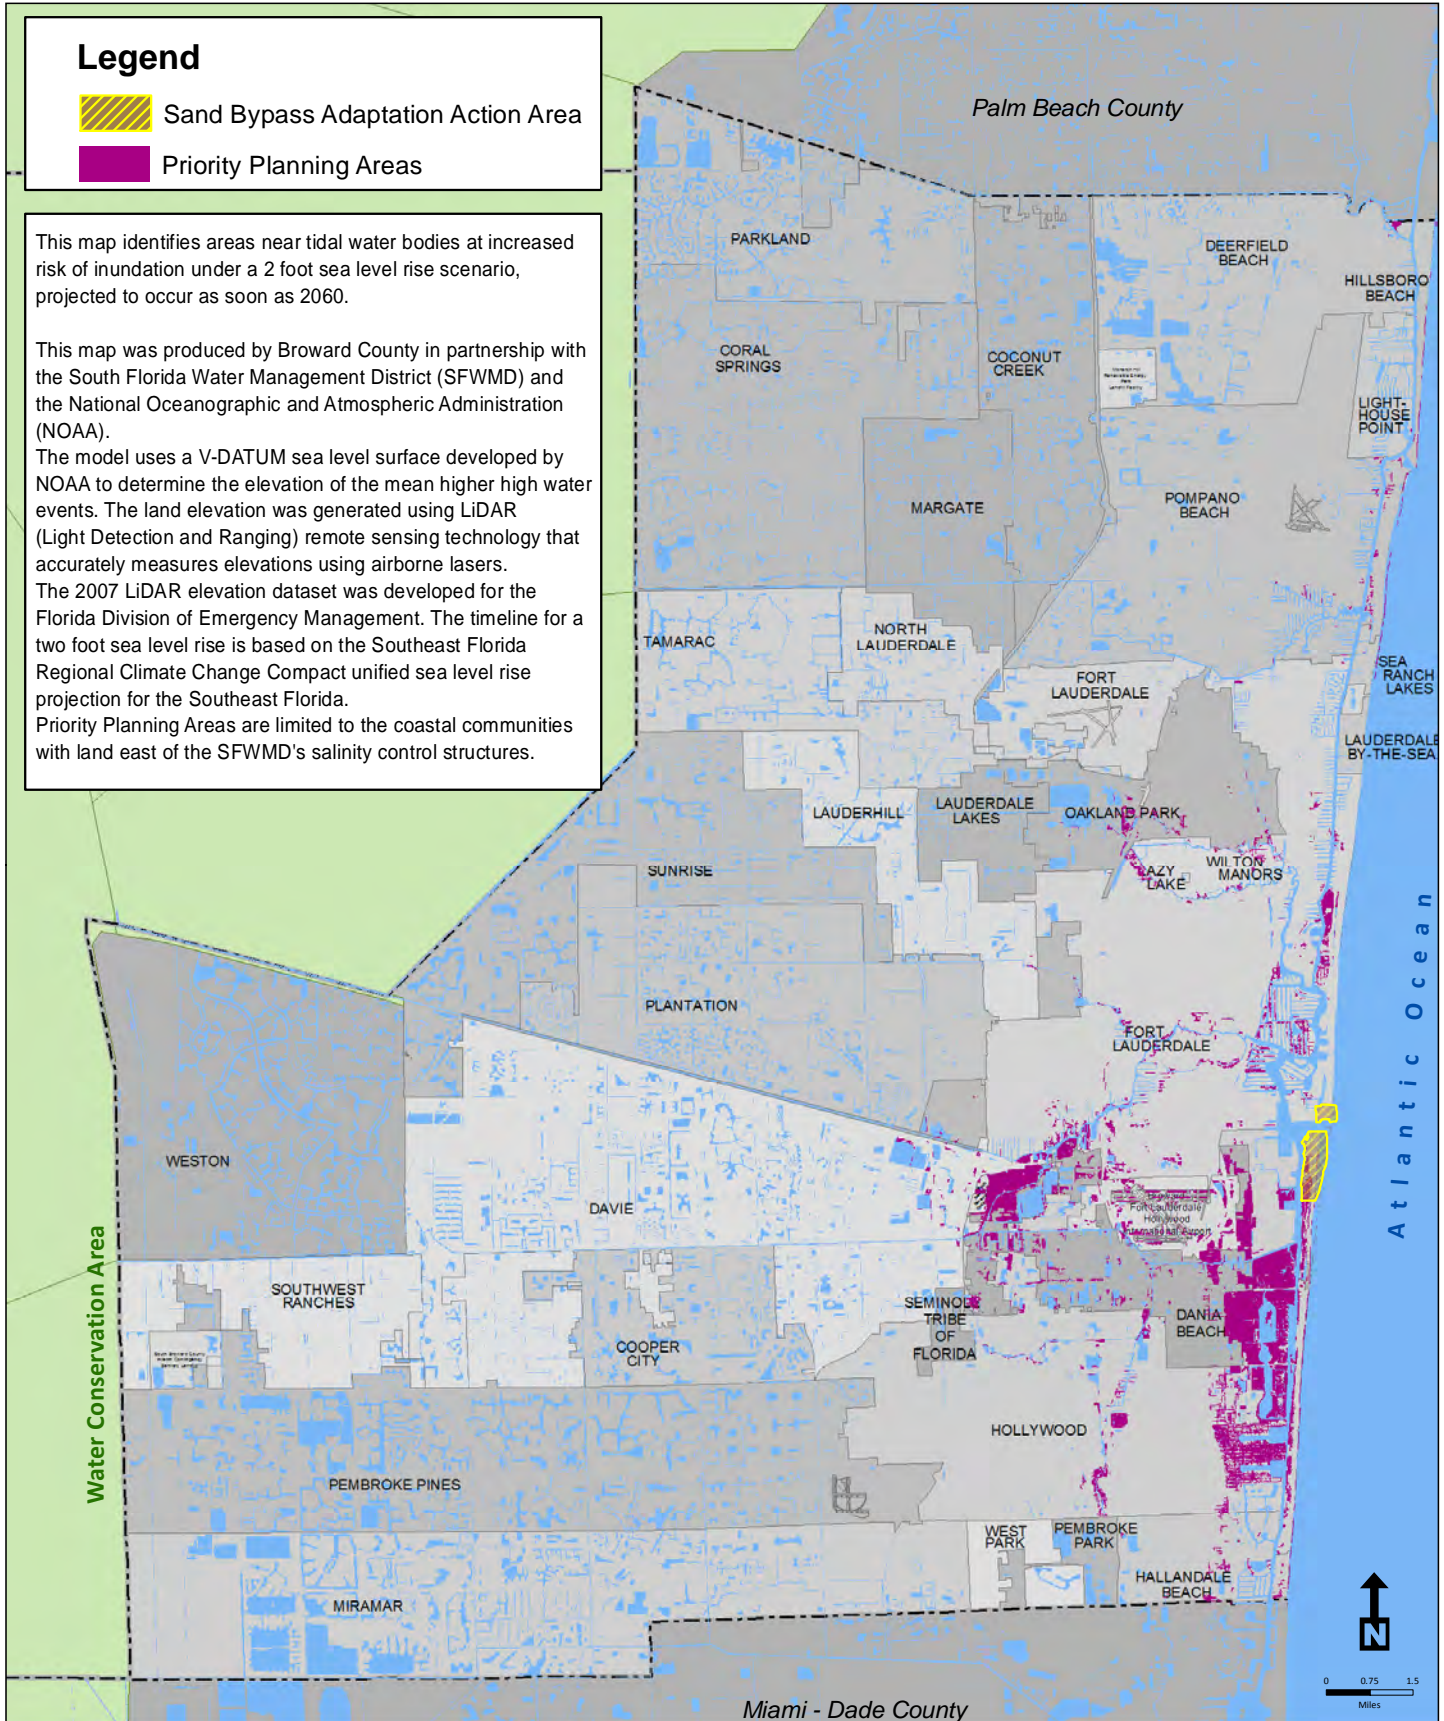

This map identifies areas near tidal water bodies at increased risk of inundation under a 2 foot sea level rise scenario, projected to occur as soon as 2060.

This map was produced by Broward County in partnership with the South Florida Water Management District (SFWMD) and the National Oceanographic and Atmospheric Administration (NOAA).

The model uses a V-DATUM sea level surface developed by NOAA to determine the elevation of the mean higher high water events. The land elevation was generated using LiDAR (Light Detection and Ranging) remote sensing technology that accurately measures elevations using airborne lasers.

The 2007 LiDAR elevation dataset was developed for the Florida Division of Emergency Management. The timeline for a two foot sea level rise is based on the Southeast Florida Regional Climate Change Compact unified sea level rise projection for the Southeast Florida.

Priority Planning Areas are limited to the coastal communities with land east of the SFWMD's salinity control structures.

Adopted: December 8, 2015

Division Name: Environmental Planning and Community Resilience
Department Name: Environmental Protection and Growth Management

This map is for planning purposes and should not be used for legal boundary determinations.

Map Narrative

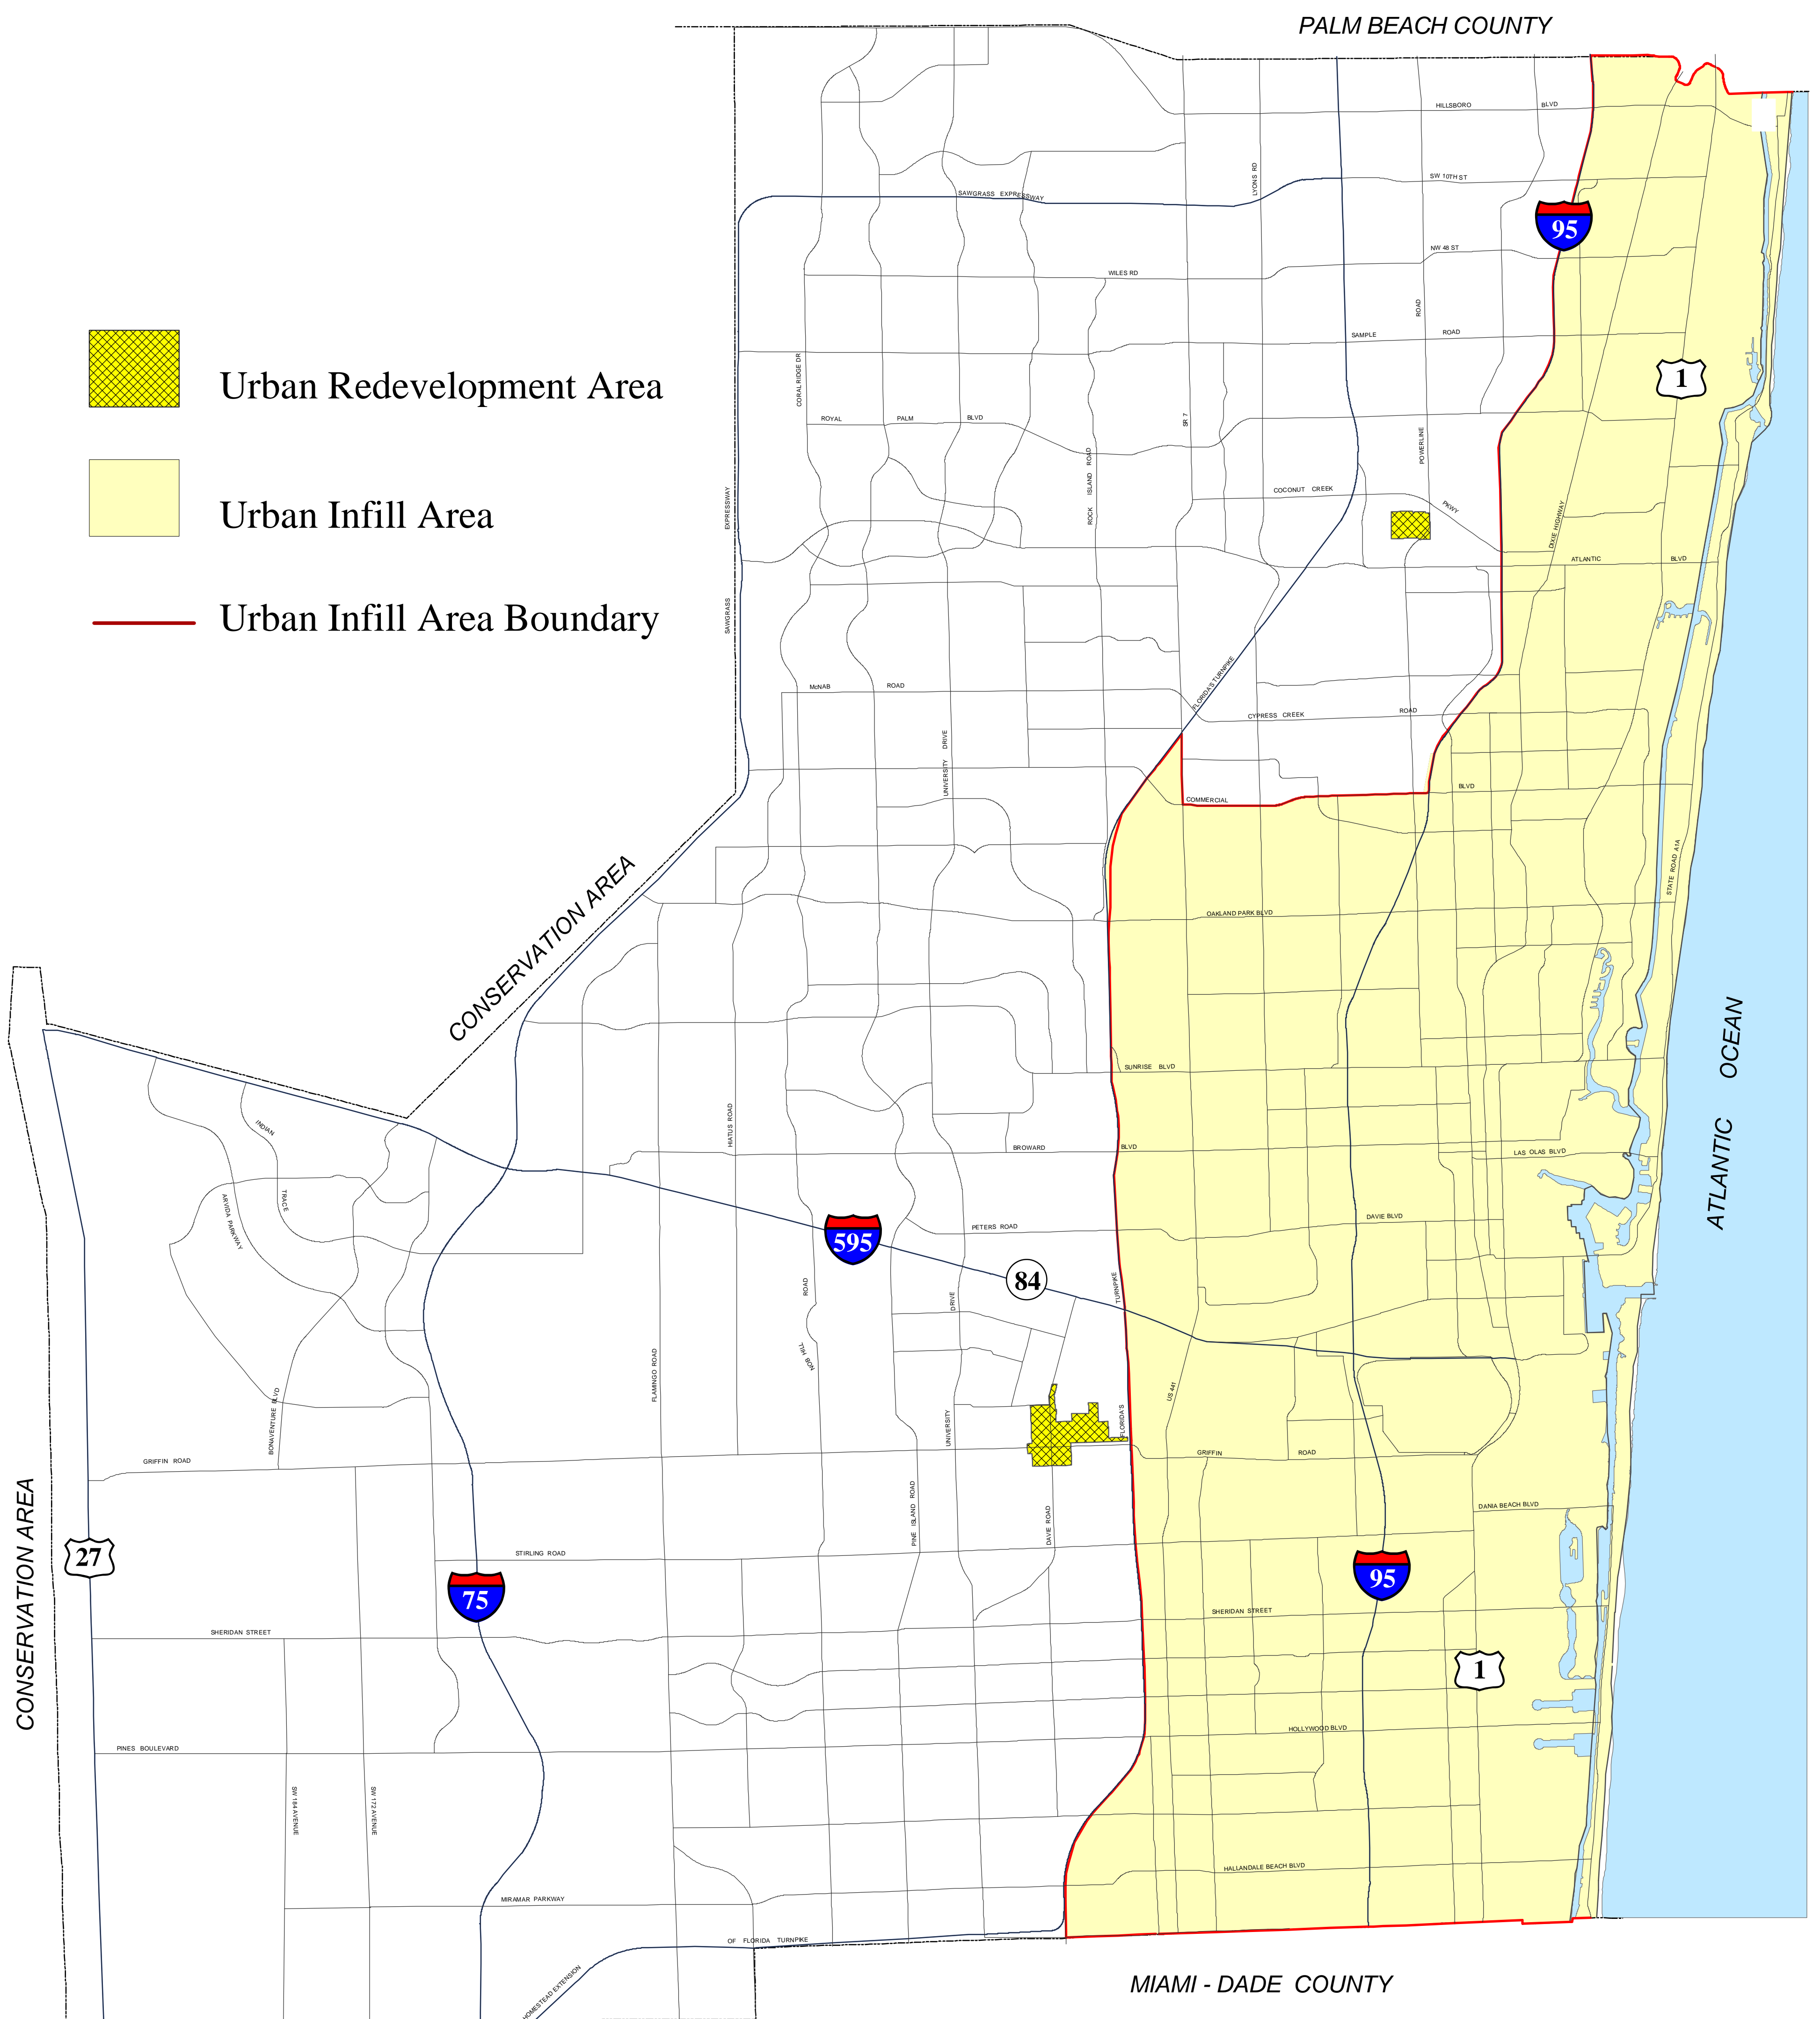

Priority Planning Areas For Sea Level Rise Map:

This map identifies areas near tidal water bodies at increased risk of inundation under a 2 foot sea level rise scenario, projected to occur as soon as 2060. This map was produced by Broward County in partnership with the South Florida Water Management District (SFWMD) and the National Oceanographic and Atmospheric Administration (NOAA). The model uses a V-DATUM sea level surface developed by NOAA to determine the elevation of the mean higher high water events. The land elevation was generated using LiDAR (Light Detection and Ranging) remote sensing technology that accurately measures elevations using airborne lasers. The 2007 LiDAR elevation dataset was developed for the Florida Division of Emergency Management. The timeline for a two foot sea level rise is based on the Southeast Florida Regional Climate Change Compact unified sea level rise projection for the Southeast Florida. Priority Planning Areas are limited to the coastal communities with land east of the SFWMD's salinity control structures.
